This book is a rare resource consisting of problems and solutions similar to those seen in mathematics contests from around the world. It is an excellent training resource for high school students who plan to participate in mathematics contests, and a wonderful collection of problems that can be used by teachers who wish to offer their advanced students some challenging nontraditional problems to work on to build their problem solving skills. It is also an excellent source of problems for the mathematical hobbyist who enjoys solving problems on various levels. Problems are organized by topic and level of difficulty and are cross-referenced by type, making finding many problems of a similar genre easy. An appendix with the mathematical formulas needed to solve the problems has been included for the reader's convenience. We expect that this book will expand the mathematical knowledge and help sharpen the skills of students in high schools, universities and beyond. Contents:Arithmetic and LogicAlgebraGeometryTrigonometryLogarithmsCountingNumber

TheoryProbabilityFunctional Equations Readership: High school students, teachers and general public interested in exciting mathematics problems.

This book is an exploration of tools and mathematics and issues in mathematics education related to tool use. The book has five parts. The first part reflects on doing a mathematical task with different tools, followed by a mathematician's account of tool use in his work. The second considers prehistory and history: tools in the development from ape to human; tools and mathematics in the ancient world; tools for calculating; and tools in mathematics instruction. The third part opens with a broad review of technology and intellectual trends, circa 1970, and continues with three case studies of approaches in mathematics education and the place of tools in these approaches. The fourth part considers issues related to mathematics instructions: curriculum, assessment and policy; the calculator debate; mathematics in the real world; and teachers' use of technology. The final part looks to the future: task and tool design and new forms of activity via connectivity and computer games.

This book presents all the publicly available questions from the PISA

surveys. Some of these questions were used in the PISA 2000, 2003 and 2006 surveys and others were used in developing and trying out the assessment.

This revolutionary S.E.H. Mathematics Class 10th book will help you to solve all types of questions with short tricks and long academic method. the main motive to write this book to improve the mathematical ability of all the children. because during the pandemic (Covid - 19) many more children lost their basic knowledge which they got from their previous classes like 7th , 8th, 9th and also some children buy many more books, solutions, guides, series to get full satisfaction in their typical subjects like maths. this book contains all the questions of NCERT Maths book and R.D. Sharma's book. because NCERT book is not sufficient and R.D. Sharma's Book is look like an Epic . so the author represents this combination with a different manner. the author (Himanshu Sharma) try to create a book which will help to all of them, who were in doubts, queries, weak concepts, & demolished basics which was affected by pandemic.

Cross-curricular approaches have much to offer the modern mathematics classroom. They can help teachers to present mathematics as a growing, relevant discipline that is central to much of modern life, and help learners to make sense of what they are doing and why.
