Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that, by looking at the big ideas at the eighth-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message—that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement, with tasks that reflect the latest brain science on learning. Open, creative, and visual math tasks have been shown to improve student test scores, and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.

Common Core's Mathematics Maps will be based on (not merely aligned to) the Common Core State Standards (CCSS). The Maps will imbed the standards into a clear, sequenced, and specific instructional guide to addressing key topics in each grade. The chief goal of the Maps is to provide educators with a highly usable tool for addressing the CCSS within the context of conveying the seamless story of mathematics in the course of students' K-12 mathematics education. That story will unfold in a series of 4-7 units per grade, paced to ensure students' mastery of each topic. Each unit will include a sequenced series of sample activities that illustrate model instructional approaches and employ manipulatives in a helpful, non-distracting manner. The Maps would be compatible with a wide array of textbooks and additional resources.
