Crime and Crime Control in South Africa's Transition

10th International Symposium, PAAP 2019, Guangzhou, China, December 12–14, 2019, Revised Selected Papers

Crime is one of the major challenges to any new democracy. Violence often increases after the lifting of authoritarian control, or in the aftermath of regime change. But how can a fledgling democracy fight crime without violating the fragile rights of its citizens? In Transformation and Trouble, accomplished theorist and criminal justice scholar Diana Gordon critically examines South Africa's efforts to strike the perilous balance between democratic participation and social control. South Africa has made great progress in pursuing the Western ideals of participatory justice and due process. Yet Gordon finds that popular concerns about crime have fostered the growth of a punitive criminal justice system that undermines the country's rights-oriented political culture. Transformation and Trouble calls for South Africa to reaffirm its commitment to public empowerment by reforming its criminal justice system-an approach, she argues, that would strengthen the country's new democracy. "An eloquent, critical, but ultimately optimistic, analysis of the democratization of crime and justice in post-apartheid South Africa." --Bill Dixon, School of Criminology, Education, Sociology and Social Work, Keele University "A must read for understanding contemporary South Africa's agonizing dilemmas as it struggles to reconcile crime control with democratic values." --Jerome H. Skolnick, New York University School of Law "Gordon's vast experience with criminal justice illuminates her cautionary tale of the search for a new way in south Africa." --Paul Chevigny, New York University Diana Gordon is Professor Emerita of Political Science and Senior Research Scholar, City University of New York.

Essentials of Community Corrections offers you a concise and practical perspective on community corrections while emphasizing successful offender reentry through strong community partnerships. Author Robert D. Hanser draws on his expertise with offender treatment planning, special needs populations, and the comparative criminal justice fields to present you with a complete introduction to community corrections today. A variety of practical pedagogical tools offer you insights into the daily lives of those working in the field and encourage you to start thinking like practitioners. Key Features: What Would You Do? assignments give you the chance to apply what they have learned by analyzing real-world scenarios to determine the best course of action for common challenges in community supervision. Applied Theory inserts throughout the book provide you with a focused application of a specific theory to particular issues in community corrections. Cross-National Perspective boxes demonstrate common themes in community corrections around the world, as well as different approaches used in other countries. Applied Exercises encourage you to reflect on your understanding of each chapter's content and to demonstrate your competence in using the information, techniques, and processes that you have learned. Food for Thought features at the end of each chapter guide you through a recent research study related to community corrections and include follow-up questions to help you think critically.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Crime in South Africa

By focusing attention on individuals rather than on aggregates, this book takes a novel approach to studying criminal behavior. It develops a framework for collecting information about individual criminal careers and their parameters, reviews existing knowledge about criminal career dimensions, presents models of offending patterns, and describes how criminal career information can be used to develop and refine criminal justice policies. In addition, an agenda for future research on criminal careers is presented.

The book "Ultimate Guide for FCI Assistant Grade - III Recruitment Exam Paper 1 & 2" has been written exclusively for the vacancies of General, Depot, Technical and Accounts cadre. The Salient Features of the Book; Comprehensive Sections on : Quantitative Aptitude, General Intelligence - Verbal & Non Verbal, English Language and General Awareness; Exhaustive question bank at the end of each chapter. State Crimes Against Democracy

Consists of reproductions of articles from South African newspapers.

In this text, the editors analyze the diverse situations that police forces operate under and the challenges that they face in different kinds of democracies. This cross-cultural comparison of various systems highlights the universal observation that police are a anomaly in a democracy and explores how various influences-for example, large-scale social violence, a zeal for crime fighting, and vulnerability to temptation-often find police incapable of behaving in a democratic manner. Challenges of Policing Democracies goes beyond just showing the similarities and differences of the policing challenges democratic societies face, it also examines the responses and remedies adopted by police in various countries at different levels of democratic achievement and how every society struggles with the challenges of preserving democratic values without sacrificing the effectiveness of policing.

These Proceedings are the work of researchers contributing to the 10th International Conference on Cyber Warfare and Security ICCWS 2015, co hosted this year by the University of Venda and The Council for Scientific and Industrial Research. The conference is being held at the Kruger National Park, South Africa on the 24 25 March 2015. The Conference Chair is Dr Jannie Zaaïman from the University of Venda, South Africa, and the Programme Chair is Dr Louise Leenen from the Council for Scientific and Industrial Research, South Africa.

Criminological theory dating back one hundred years has been aware of the need to develop a neurobiology of extroversion, impulsivity, frontal-lobe dysfunction, and aggressive behavior, yet in the twentieth century criminologists have largely forsaken this psychobiological legacy. The Neurobiology of Criminal Behavior looks at this legacy with reference to a variety of neurobiological methodologies currently in vogue. The authors are all distinguished researchers who have contributed considerably to their respective fields of psychiatry, psychology, psychobiology, and neuroscience.

This is a guide to recommended practices for crime scene investigation. The guide is presented in five major sections, with sub-sections as noted: (1) Arriving at the Scene: Initial Response/Prioritization of Efforts (receipt of information, safety procedures, emergency care, secure and control persons at the scene, boundaries, turn over control of the scene and brief investigator/s in charge, document actions and observations); (2) Preliminary Documentation and Evaluation of the Scene (scene assessment, "walk-through" and initial documentation); (3) Processing the Scene (team composition, contamination control, documentation and prioritize, collect, preserve, inventory, package, transport, and submit evidence); (4) Completing and Recording the Crime Scene Investigation (establish debriefing team, perform final survey, document the scene); and (5) Crime Scene Equipment (initial responding officers, investigator/evidence technician, evidence collection kits).

The field of data mining is receiving significant attention in today's information-rich society, where data is available from different sources and formats, in large volumes, and no longer constitutes a bottleneck for knowledge acquisition. This rich information has paved the way for novel areas of research, particularly in the crime data analysis realm. Data Mining Trends and Applications in Criminal Science and Investigations presents scientific concepts and frameworks of data mining and analytics implementation and uses across various domains, such as public safety, criminal investigations, intrusion detection, crime scene analysis, and suspect modeling. Exploring the diverse ways that data is revolutionizing the field of criminal science, this publication meets the research needs of law enforcement professionals, data analysts, investigators, researchers, and graduate-level students.

Detailed explanation to each and every question is provided immediately after the Question Paper

This handbook explores criminal law systems from around the world, with the express aim of stimulating comparison and discussion. General principles of criminal liability receive prominent coverage in each essay—including discussions of rationales for punishment, the role and design of criminal codes, the general structure of criminal liability, accounts of mens rea, and the rights that criminal law is designed to protect—before the authors turn to more specific offenses like homicide, theft, sexual offenses, victimless crimes, and terrorism. This key reference covers all of the world's major legal systems—common, civil, Asian, and Islamic law traditions—with essays on sixteen countries on six different continents. The introduction places each country within traditional distinctions among legal systems and explores noteworthy similarities and differences among the countries covered, providing an ideal entry into the fascinating range of criminal law systems in use the world over.

Geological techniques are widely used in two aspects of serious criminal investigations: (1) the search for clandestine burial sites, based on near-surface geophysics or through the detection of decomposition signals and (2) the analysis of trace evidence to identify its source location or test the possible association between the trace evidence and a known location of an offence. Although geoforensics is used in such investigations world-wide there are still considerable gaps in the published literature. In addition, there is increasing concern regarding the illegal release of wastes either into the atmosphere, water courses or on to the land surface, and a growing realization that the techniques used in criminal forensics are equally useful in the investigation of environmental crime. This book bridges the gap between environmental and criminal geoforensics with conceptual, methodological and case study contributions. This demonstrates the significant potential that geoforensics holds for investigating and regulatory officers.

This book constitutes the refereed proceedings of the 10th International Symposium on Parallel Architectures, Algorithms and Programming, PAAP 2019, held in Guangzhou, China, in December 2019. The 39 revised full papers and 8 revised short papers presented were carefully reviewed and selected from 121 submissions. The papers deal with research results and development activities in all aspects of parallel architectures, algorithms and programming techniques.
