Whilst there has been some important debate about the theoretical, methodological and ethical issues of conducting research on sensitive topics, and/or with vulnerable populations, the number of scholarly publications focused solely on these topics is limited and not up to date. The book intends to fill this gap by providing various research experiences, as well as the elements that characterize them. The articles selected for this book intend, first and foremost, to stimulate reflexivity amongst the use of the concepts of sensitive topics and vulnerable groups, and to provide tools that will allow
