If engineering is the art and science of technical problem solving, systems architecting happens when you don't yet know what the problem is. The third edition of a highly respected bestseller, The Art of Systems Architecting provides in-depth coverage of the least understood part of systems design: moving from a vague concept and limited resources to a satisfactory and

The author supplies practical guidelines for avoiding common systematic failures while implementing new mandates. He uses a heuristics-based approach that provides an organized attack on very ill-structured engineering problems.

approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of Battle Hymn of the Tiger Mother). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In

Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy

Play is "an occasion of pure waste: waste of time, energy, ingenuity, skill, and often of money." It is also an essential element of human social and spiritual development. In this study, Roger Caillois defines play as a voluntary activity that occurs in a pure space, isolated and protected from the rest of life. Within limits set by rules that provide a level playing field, players move toward an unpredictable outcome by responding to their opponents' actions. Caillois qualifies types of games and ways of playing, from the improvisation characteristic of children's play to the disciplined pursuit of solutions to gratuitously difficult puzzles. He also examines

the means by which games become part of daily life, ultimately giving cultures their most characteristic customs and institutions.
