Acronym agglomeration is an affliction of the age, and there are acronym addicts who, in their weakness, find it impossible to resist them. More than once in recent months my peers have cautioned me about my apparent readiness to use not only acronyms, but abbreviations, foreign isms, codes, and other cryptic symbols rather than common, ordinary American words. Many among us, though, either have not received or have chosen to ignore such advice. As a consequence, what we write and speak is full of mystery and confusion. It is then for the reader and listener and for the writer and speaker that Reta C. Moser has compiled this guide. Its effective application to the art of communication is urged. Such use should help avoid many of the misunderstandings involving terminology which occur daily. Although such misunderstandings are certainly crucial in humanistic and social situations, they are often of immediate import and the trigger to disaster in scientific, technical, and political situations. Some 15,000 acronyms and 25,000 definitions are provided (a 50- and 47 -percent increase over the 1964 edition!), with due credit to Miss Moser's diligence in making the compilation and with the acknowledgment that the acronymical phenomenon is very much with us. This edition, like the first, is certain to be of value to writers, librarians, editors, and others who must identify and deal with acronyms. For years, developers have wished for a programming language with the power and flexibility of C++ that's also easy to write, read, and maintain like Microsoft "RM" Visual Basic "RM". Visual C# "TM", the hot new Web-enabled programming language from Microsoft, satisfies those wishes. Its object-oriented, programmer-friendly capabilities make it vastly easier to learn and use than older languages such as C++ -- especially for developing Web application. "Inside C#" provides the ideal in-depth look at the architecture and programming elements of Microsoft Visual C#. While other books may concentrate on C# development and runtime environments, this book is devoted to the language itself. It will have an exceptionally long shelf life, since the core C# language will change very little over time, while environments such as Microsoft Visual Studio "RM" may change yearly. This book is perfect for any Visual Basic developer who wants to move up to the next-generation language, and for any Visual C++ developer who wants an easier language to use for developing Web-enabled applications for the Internet. It includes tips throughout that highlight differences between Visual Basic, C++, and C# to help select the best language for the job, plus C# sample code both in the text and on an accompanying CD. Ask Dr. Mueller captures the glamour and grittiness of Cookie Mueller's life and times. Here are previously unpublished stories - wacky as they are enlightening - along with favorites from Walking Through Clear Water in a Pool Painted Black and other publications. Also the best of Cookie's art columns from Details magazine, and the funniest of her advice columns from the East Village Eye, on everything from homeopathic medicine to how to cut your cocaine with a healthy substance. This collection is as much an autobiography as it is a map of downtown New York in the early '80s - that moment before Bright Lights, Big City, before the art world exploded, before New York changed into a yuppie metropolis, while it still had a glimmer of bohemian life.

The Education Council Act of 1991 established the National Education Commission on Time and Learning as an independent advisory body and called for a comprehensive review of the relationship between time and learning in U.S. schools. This document serves as a supplementary volume to the commission's first report released in May 1994, which found that most school-reform designs are structurally flawed by their adherence to a traditional school calendar. This volume describes innovative approaches to the use of school time. It provides nearly 40 examples of exemplary efforts to make better use of available time and extend the amount of time students spend learning. The brief program descriptions are from 15 elementary schools, 15 middle and senior high schools, 4 districtwide efforts, and 6 special programs. They include public and private schools in rural, urban, and suburban areas from 26 states. Information for reaching contact persons is provided. A review of the programs indicates that many different kinds of schools and districts have already implemented many of the commission's recommendations. The most common approaches in descending order include: (1) redesigning available time; (2) employing technology; (3) extending the school day or year; (4) providing time for professional development; and (5) providing support services for children or families. Finally, the approaches to the redesign of time usage differ by school level. (LMI)
