Meaning And Speech Acts

In the study of language, as in any other systematic study, there is no neutral terminology. Every technical term is an expression of the assumptions and theoretical presuppositions of its users; and in this introduction, we want to clarify some of the issues that have surrounded the assumptions behind the use of the two terms "speech acts" and "pragmatics". The notion of a speech act is fairly well understood. The theory of speech acts starts with the assumption that the minimal unit of human communica tion is not a sentence or other expression, but rather the performance of certain kinds of acts, such as making statements, asking questions, giving orders, describing, explaining, apologizing, thanking, congratulating, etc. Characteristically, a speaker performs one or more of these acts by uttering a sentence or sentences; but the act itself is not to be confused with a sentence or other expression uttered in its performance. Such types of acts as those exemplified above are called, following Austin, illocutionary acts, and they are standardly contrasted in the literature with certain other types of acts such as perlocutionary acts and propositional acts. Perlocutionary acts have to do with those effects which our utterances have on hearers which go beyond the hearer's understanding of the utterance. Such acts as convincing, persuading, annoying, amusing, and frightening are all cases of perlocutionary acts.

Most of the time our utterances are automatically interpreted as speech acts: as assertions, conjectures and testimonies; as orders, requests and pleas; as threats, offers and promises. Surprisingly, the cognitive correlates of this essential component of human communication have received little attention. This book fills the gap by providing a model of the psychological processes involved in interpreting and understanding speech acts. The theory is framed in naturalistic terms and is supported by data on language development and on autism spectrum disorders. Mikhail Kissine does not presuppose any specific background and addresses a crucial pragmatic phenomenon from an interdisciplinary perspective. This is a valuable resource for academic researchers and graduate and undergraduate students in pragmatics, semantics, cognitive linguistics, psycholinguistics and philosophy of language.

This work sets out Austin's conclusions in the field to which he directed his main efforts for at least the last ten years of his life. Starting from an exhaustive examination of his already well-known distinction between performative utterances and statements, Austin here finally abandons that distinction, replacing it with a more general theory of 'illocutionary forces' of utterances which have important bearings on a wide variety of philosophicalproblems.

The nature and function of language as Man's chief vehicle of communi cation occupies a focal position in the human sciences, particularly in philosophy. The concept of 'communication' is problematic because it suggests both 'meaning' (the nature of language) and the activity of speaking (the function of language). The philosophic theory of 'speech acts' is one attempt to clarify the ambiguities of 'speech' as both the use of language to describe states of affair and the process in which that description is generated as 'communication'. The present study, Speech Act Phenomenology, is in part an exam ination of speech act theory. The theory offers an explanation for speech performance, that is, the structure of speech acts as 'relationships' and the content of speech acts as 'meaning'. The primary statement of the speech act theory that is examined is that presented by Austin. A seconda ry concern is the formulation of the theory as presented by Searle and Grice. The limitations of the speech act theory are specified by applying the theory as an explanation of 'human communication'. This conceptual examination of 'communication' suggests that the philosophic method of 'analysis' does not resolve the antinomy of language 'nature' and 'function'. Basically, the conceptual distinctions of the speech act theory (i. e. locutions, illocutions, and perlocutions) are found to be empty as a comprehensive explanation of the concept 'communication'.

Philosophy of Emerging Media
Illocutionary Acts and Sentence Meaning
Speech Acts, Meaning and Intentions
Meaning and Speech Acts: Formal semantics of success and satisfaction
Speech Acts in English

The term "emerging media" responds to the "big data" now available as a result of the larger role digital media play in everyday life, as well as the notion of "emergence" that has grown across the architecture of science and technology over the last two decades with increasing imbrication. The permeation of everyday life by emerging media is evident, ubiquitous, and destined to accelerate. No longer are images, institutions, social networks, thoughts, acts of communication, emotions and speech-the "media" by means of which we express ourselves in daily life-linked to clearly demarcated, stable entities and contexts. Instead, the loci of meaning within which these occur shift and evolve quickly, emerging in far-reaching ways we are only beginning to learn and bring about. This volume's purpose is to develop, broaden and spark future philosophical discussion of emerging media and their ways of shaping and reshaping the habitus within which everyday lives are to be understood. Drawing from the history of philosophy ideas of influential thinkers in the past, intellectual path makers on the contemporary scene offer new philosophical perspectives, laying the groundwork for future work in philosophy and in media studies. On diverse topics such as identity, agency, reality, mentality, time, aesthetics, representation, consciousness, materiality, emergence, and human nature, the questions addressed here consider the extent to which philosophy should or should not take us to be facing a fundamental transformation.

'This small but tightly packed volume is easily the most substantial discussion of speech acts since John Austin's How To Do Things With Words and one of the most important contributions to the philosophy of language in recent decades.'--Philosophical Quarterly
Speech Act Theory: A Univen Study was undertaken to investigate the pragmatic value of the utterances of selected students at the University of Venda, South Africa. Utterances of second-language users of a language reflect the wealth of their language experiences and hence caution has to be exercised when conducting an investigation into such utterances. It is within this background that this investigation was conducted into the meaning-creation strategies and abilities of the participants in this study. The very idiocyncratic utterances investigated demonstrated vividly the multi-dimensional thought process exploited by the creators of these samples. Also demonstrated by the analyses is the nature of communication and the amount of linguistic interaction necessary for interlocutors to create meaning.

This book provides positive evidence regarding the validity of the language used in sitcom and drama audiovisual genres and its possible applicability to the teaching of pragmatics in English as second and foreign language contexts. The first part of the text includes a description of pragmatics and its components, speech act theories development, and the use of audiovisual input for the teaching of pragmatic aspects. The second section is devoted to the sitcom and drama transcripts analysis of direct and indirect realisations of multiple speech acts as pragmalinguistic resources, sociopragmatic variables that may influence conversation, such as politeness needs and context, and interactional patterns, including turn-taking, sequences and adjacency pairs. The book provides insightful quantitative and qualitative results which will serve to confirm, along with previous research, the usefulness and validity of this type of input, not only for teaching pragmatics, but also for the development of tasks and activities with different pedagogical outcomes and students' needs. As such, this volume is a useful resource for pragmaticians and discourse analysis scholars since its complete analysis of transcripts justifies the validity of audiovisual input and its different applications.

The Emotive Theory of Ethics
Speech Acts

This work concerns an examination and revision of some of the main theses of Speech Act Theory in relation to the problem of ideology and action-guiding language. Starting from the idea that linguistic philosophy must take into account how the social structure of the linguistic community may influence and direct the way its language is used, a critical method of analysis is proposed, developing Speech Act Theory in a way suitable for this purpose. The main guideline of this proposal is the consideration that a theory of action rather than a theory of meaning should be taken as central in the analysis of language. The notion of illocutionary force, the problem of intentions and conventions in the constitution of speech acts, the definition of context, and the classification of speech acts, are then discussed. Based on the conclusions of this discussion a pragmatic method for the analysis of language is formulated.

In Meaning and Speech Acts Daniel Vanderveken further develops the logic of speech acts and the logic of propositions to construct a general semantic theory of natural languages.

The primary units of meaning in the use and comprehension of language are speech acts of the type called illocutionary acts. In Foundations of Illocutionary Logic John Searle and Daniel Vanderveken presented the first formalised logic of a general theory of speech acts. In Meaning and Speech Acts Daniel Vanderveken further develops the logic of speech acts and the logic of propositions to construct a general semantic theory of natural languages. Volume I, Principles of Language Use explains the general principles that connect meaning, reason, thought and speech acts in the semantic structure of language. It presupposes no detailed knowledge of logical formalism, and will be accessible to a large readership of students and scholars from philosophy, lingustics, cognitive psychology and computer science. Volume II, Formal Semantics of Success and Satisfaction uses the resources of philosophical and mathematical logics to develop a formalisation of the laws of the semantic theory advanced in Volume I. It will be of interest to theoretical linguists and those involved in mathematical logic and artificial intelligence.

Meaning and Speech Acts: Volume 1, Principles of Language UseCambridge University Press
Speech-act theory is the interdisciplinary study of the wide range of things we do with words. Originally stemming from the influential work of twentieth-century philosophers, including J. L. Austin and Paul Grice, recent years have seen a resurgence of work on the topic. On one hand, a new generation of linguists, philosophers, and cognitive scientists have made impressive progress toward reverse-engineering the psychological underpinnings that allow us to do so much with language. Meanwhile, speech-act theory has been used to enrich our understanding of pressing social issues that include freedom of speech, racial slurs, and the duplicity of political discourse. This volume presents fourteen new essays by many of the philosophers and linguists who have led this resurgence. The topics span a methodological range that includes formal semantics and pragmatics, foundational issues about the nature of linguistic representation, and work on a variety of forms of indirect and/or uncooperative speech that occupies the intersection of the philosophy of language, ethics, and political philosophy. Several of the contributions demonstrate the benefits of integrating the methodologies and perspectives of these literatures. The essays are framed by a comprehensive introductory survey of the contemporary literature written by the editors.
Seminar paper from the year 2016 in the subject English Language and Literature Studies - Linguistics, grade: 1,5, , language: English, abstract: John R. Searle was born in 1932 in Denver, Colorado. In his article What is a Speech Act? Searle develops a "theory in the philosophy of a language, according to which speaking in a language is a matter of performing illocutionary acts with certain intentions, according to constitutive rules (Grewendorf / Meggle 2002: 4). The following paper will deal with the ideas on speech acts developed in Searle's article. First, a fundamental understanding of the assumptions Searle's theory is based on will be provided. There will be a brief introduction to the theories of J.L. Austin and H.P. Grice, whom Searle's article was mostly influenced by. Grice's Meaning and Austin's How to do things with words will constitute the reading mostly consulted. After providing a basis for Searle's theory, his article What is a Speech Act? will be looked at in detail. The examinations will include Searle's distinction between regulative rules and constitutive rules and his introduction of the notions 'proposition-indicating element' and 'function-indicating device', as derived from 'illocutionary act' and 'propositional content of an illocutionary act'. The focus will then be on Searle's conditions for the illocutionary act of promising, and the rules for the use of the function-indicating device for promising, which he derives from these conditions. There will finally be a brief overview on revisions and amendments Searle developed on his theory after 1965. These include a more detailed classification of speech acts and a distinction between speaker meaning and sentence meaning.
The first handbook to survey and expand the burgeoning field of corpus pragmatics, the intersection of pragmatics and corpus linguistics.

Studies in the Theory of Speech Acts
A reassessment of Speech Act Theory
Assertions belong to the family of speech acts that make claims regarding how things are. They include statements, avowals, reports, expressed judgments, and testimonies - acts which are relevant across a host of issues not only in philosophy of language and linguistics but also in subdisciplines such as epistemology, metaphysics, philosophy of mind, ethics, and social and political philosophy. Over the past two decades, the amount of scholarship investigating the speech act of assertion has increased dramatically, and the scope of such research has also grown. The Oxford Handbook of Assertion explores various dimensions of the act of assertion: its nature; its place in a theory of speech acts, and in semantics and meta-semantics; its role in epistemology; and the various social, political, and ethical dimensions of the act. Essays from leading theorists situate assertion in relation to other types of speech acts, exploring the connection between assertions and other phenomena of interest not only to philosophers but also to linguists, psychologists, anthropologists, lawyers, computer scientists, and theorists from communication studies.
Pragmatics is the study of human communication: the choices speakers make to express their intended meaning and the kinds of inferences that hearers draw from an utterance in the context of its use. This Handbook surveys pragmatics from different perspectives, presenting the main theories in pragmatic research, incorporating seminal research as well as cutting-edge solutions. It addresses questions of rational and empirical research methods, what counts as an adequate and successful pragmatic theory, and how to go about answering problems raised in pragmatic theory. In the fast-developing field of pragmatics, this Handbook fills the gap in the market for a one-stop resource to the wide scope of today's research and the intricacy of the many theoretical debates. It is an authoritative guide for graduate students and researchers with its focus on the areas and theories that will mark progress in pragmatic research in the future.
This book presents a new classification of speech acts. It is an alter native to all previously published classifications of speech acts. The classification proposed here is based on an extensive set of data, name lyon all the verbs designating linguistic activities and aspects thereof. A theoretically and methodologically justifiable method is used to proceed in a number of steps from these data to the classification. The classification is documented in a lexicon with two sections. The first section exhibits the classification in all its details. Each verb is listed to its meaning at the appropriate place in the classification. according The second, alphabetically ordered section enables one to locate the verbs classified in the first part. The speech act classification as presented in this book has a number of consequences for linguistic theorizing: the book makes advances in three linguistically relevant fields - speech act theory, lexicology, and theory of meaning. In speech act theory firstly of course a classifica tion is proposed which is theoretically justified and which is simul taneously based explicitly and systematically on linguistic data. Second ly, a wider concept of speech acts is introduced which proves its value by making possible a linguistically justified classification. Thirdly, the concept of speech act sequence (or more generally partial order) is brought into focus as a major organizational principle of the semantic relation between speech acts.
This book offers a new theory of the structure of propositions, which provides a uniform treatment of constative and performative sentences. Jerrold Katz shows that performatives can enter into logically valid arguments, even though, as Austin claimed, they can't be true or false. Katz also argues that âeoespeech act theoryàe is not a theory at all, but an assortment of observations about heterogeneous aspects of the performance of speech acts. He shows that a better explanation of speech acts is given by a grammatical account of the illocutionary potential of sentences and a separate pragmatic account of how this potential is realized in actual speech situtations. Katz provides such a grammatical account, which makes it po for the first time to explain the illocutionary potential of sentences within grammar.

Linguistic Communication and Speech Acts
How to Do Things with Words
A direct successor to Searle's Speech Acts (C.U.P. 1969), Expression and Meaning refines earlier analyses and extends speech-act theory to new areas including indirect and figurative discourse, metaphor and fiction.

Foundations of Speech Act Theory investigates the importance of speech act theory to the problem of meaning in linguistics and philosophy. The papers in this volume, written by respected philosophers and linguists, significantly advance standards of debate in this area. Beginning with a detailed introduction to the individual contributors, this collection demonstrates the relevance of speech acts to semantic theory. It includes essays unified by the assumption that current pragmatic theories are not well equipped to analyse speech acts satisfactorily, and concludes with five studies which assess the relevance of speech act theory to the understanding of philosophical problems outside the area of philosophy of language.

Did earlier speakers of English use the same speech acts that we use today? Did they use them in the same way? How did they signal speech act values and how did they negotiate them in case of uncertainty? These are some of the questions that are addressed in this volume in innovative case studies that cover a wide range of speech acts from Old English to Present-day English. All the studies offer careful discussions of methodological and theoretical issues as well as detailed descriptions of specific speech acts. The first part of the volume is devoted to directives and commissives, i.e. speech acts such as requests, commands and promises. The second part is devoted to expressives and assertives and deals with speech acts such as greetings, compliments and apologies. The third part, finally, contains technical reports that deal primarily with the problem of extracting speech acts from historical corpora.

This book merges theory and practical activities to show how research on speech acts can be implemented in EFL teaching.

Basic Problems in Methodology and Linguistics

Understanding, Appreciation, Application

Originally published in 1968, this book traces the development of the emotive theory of ethics from its outline by Ogden and Richards in The Meaning of Meaning to the elaborate presentation by Stevenson in Ethics and Language. Attention is paid to the positive features of the ethical theory whilst the author also shows how a more adequate view can be reached through critical reflection on it.

Seminar paper from the year 2016 in the subject English Language and Literature Studies - Linguistics, grade: 1,0, Technical University of Braunschweig, course: Approaches to Meaning, language: English, abstract: This term paper will deal with speech act theory, especially with the success of speech acts depending on certain conditions. Due to the usage of direct and indirect speech acts in everyday conversations it will be analysed which conditions have to be fulfilled to have a successful speech act. The following theories will be used to answer the research question whether the same conditions have to be fulfilled for direct and indirect speech acts to be successful: 1) Theory of Felicity Conditions by John Searle 2) Cooperative Principle by Paul Herbert Grice 3) Inference Theory by Gordon and Lakoff The hypothesis is that indirect speech acts are different than direct speech acts due to the demanded hearer uptake and the possible ambiguity. After giving definitions of important linguistic terms and theories, the success of utterances and conversations in general will be described by the help of the Cooperative Principle by Grice. Then different examples of Direct and Indirect Speech Acts will be analysed that will show the difference between the two forms. Some of the used examples are made up and some are dialogues taken from the TV-series "The Big Bang Theory" as well as "The Walking Dead". To explain how one can interpret the implicature in an utterance, the inference thteory by Gordon and Lakoff will be taken into account. In the end it is made clear that the success of Indirect Speech Acts depends on the context in which the utterance is made and also on other external conditions which the speaker cannot control himself as the speaker often requests a hearer uptake. Different texts by Austin, Thomas, Levinson, Renkema, Cruse and Yule will be studied to get an answer to the research question. Special focus will be put on the Indirect Speech Acts as they can be ambiguous and ask for a hearer uptake to be successful.

In a pioneer study of how language is actually used, Dr. Kearns combines the rigor of formal logic with a detailed analysis of natural language patterns. Through this double focus, he develops artificial languages that are syntactically more similar to the spoken word than first-order language itself. Numerous diagrams illustrate the evolution of these artificial languages, which represent a significant contribution to both the fields of linguistics and logic. The book begins by delineating a theory of the structures of intentional acts and then applies this to the special case of linguistic acts. Given an understanding of the meanings of component expressions, we can use our knowledge of linguistic structure to determine the meaning of a complex expression. An innovative discussion of semantics is subdivided into theories of three "semantic dimensions": representational meaning, inferential meaning, and truth conditions. Drawing upon these analyses the speech act theory of this book purposes that the meaning of a sentence (sentential act) is to be explained wholly in terms of the meanings of component expressions (acts) and the structure of the sentence.

"The work of Bach and Harnish represents an able attempt by a philosopher and a linguist respectively to restore some sorely needed naturalistic assumptions to the study of linguistic communication."

Philosophical and Linguistic Perspectives

The Routledge Handbook of Translation and Pragmatics provides an overview of key concepts and theory in pragmatics, charts developments in the disciplinary relationship between translation studies and pragmatics, and showcases applications of pragmatics-inspired research in a wide range of translation, spoken and signed language interpreting activities. Bringing together 22 authoritative chapters by leading scholars, this reference work is divided into three sections: Influences and Intersections, Methodological Issues, and Applications. Contributions focus on features of linguistic pragmatics and their analysis in authentic and experimental data relating to a wide range of translation and interpreting activities, including: news, scientific, literary and audiovisual translation, translation in online social media, healthcare interpreting and audio description for the theatre. It also encompasses contributions on issues beyond the level of the text that include the study of interpersonal relationships in practitioner networks and the development of pragmatic competence in interpreter training. Each chapter includes many practical illustrative examples and a list of recommended reading. Fundamental reading for students and academics in translation and interpreting studies, this is also an essential resource for those working in the related fields of linguistics, communication and intercultural studies.

The contributions in this volume result from discussions on and with John R. Searle, containing Searle's own latest views - including his seminal ideas on Rationality in Action. The collection provides a good basis for advanced seminar debates in philosophy of language, philosophy of mind, and social philosophy, and will also stimulate some further research on all of the three main topics.

The Fifth International Congress of Logic, Methodology and Philosophy of Science was held at the University of Western Ontario, London, Canada, 27 August to 2 September 1975. The Congress was held under the auspices of the International Union of History and Philosophy of Science, Division of Logic, Methodology and Philosophy of Science, and was sponsored by the National Research Council of Canada and the University of Western Ontario. As those associated closely with the work of the Division over the years know well, the work undertaken by its members varies greatly and spans a number of fields not always obviously related. In addition, the volume of work done by first rate scholars and scientists in the various fields of the Division has risen enormously. For these and related reasons it seemed to the editors chosen by the Divisional officers that the usual format of publishing the proceedings of the Congress be abandoned in favour of a somewhat more flexible, and hopefully acceptable, method of pre sentation. Accordingly, the work of the invited participants to the Congress has been divided into four volumes appearing in the University of Western Ontario Series in Philosophy of Science. The volumes are entitled, Logic, Foundations of Mathematics and Computability Theory, Foun dational Problems in the Special Sciences, Basic Problems in Methodol ogy and Linguistics, and Historical and Philosophical Dimensions of Logic, Methodology and Philosophy of Science.

Explores the fascinating phenomenon of indirect speech acts, highlighting the situations they are used in, and how they are understood.

Speech Act Theory and Pragmatics

What is it for a sentence to have a certain meaning? This is the question that William P. Alston, one of America's most distinguished and prolific analytic philosophers, addresses in this major contribution to the philosophy of language. His answer focuses on the given sentence's potential to play the role that its speaker had in mind—what he terms the usability of the sentence to perform the illocutionary act intended by its speaker. Alston defines an illocutionary act as an act of saying something with a certain "content." He develops his account of what it is to perform such acts in terms of taking responsibility, in uttering a sentence, for the existence of certain conditions. In requesting someone to open a window, for example, the speaker takes responsibility for its being the case that the window is closed and that the speaker has an interest in its being opened. In Illocutionary Acts and Sentence Meaning, Alston expands upon this concept, creating a framework of five categories of illocutionary act and going on to argue that sentence meaning is fundamentally a matter of illocutionary act potential; that is, for a sentence to have a particular meaning is for it to be usable to perform illocutionary acts of a certain type. In providing detailed and explicit patterns of analysis for the whole range of illocutionary acts, Alston makes a unique contribution to the field of philosophy of language—one that is likely to generate debate for years to come.
