Recent Advances in Optimal Structural Design

A Case Study of Teaching Writing in Engineering

Report summaries

This database encompasses all aspects of the impact of people and technology on the environment and the effectiveness of remedial policies and technologies, featuring more than 950 journals published in the U.S. and abroad. The database also covers conference papers and proceedings, special reports from international agencies, non-governmental organizations, universities, associations and private corporations. Other materials selectively indexed include significant monographs, government studies and newsletters.

Engineering Fundamentals: An Introduction to Engineering, SI Edition

Specifically designed as an introduction to the exciting world of engineering, ENGINEERING FUNDAMENTALS: AN INTRODUCTION TO ENGINEERING encourages students to become engineers and prepares them with a solid foundation in the fundamental principles and physical laws. The book begins with a discovery of what engineers do as well as an inside look into the various areas of specialization. An explanation on good study habits and what it takes to succeed is included as well as an introduction to design and problem solving, communication, and ethics. Once this foundation is established, the book moves on to the basic physical concepts and laws that students will encounter regularly. The framework of this text teaches students that engineers apply physical and chemical laws and principles as well as mathematics to design, test, and supervise the production of millions of parts, products, and services that people use every day. By gaining problem solving skills and an understanding of fundamental principles, students are on their way to becoming analytical, detail-oriented, and creative engineers. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Engineering a Compiler

This entirely revised second edition of Engineering a Compiler is full of technical updates and new material covering the latest developments in compiler technology. In this comprehensive text you will learn important techniques for constructing a modern compiler. Leading educators and researchers Keith Cooper and Linda Torczon combine basic principles with pragmatic insights from their experience building state-of-the-art compilers. They will help you fully understand important techniques such as compilation of imperative and object-oriented languages, construction of static single assignment forms, instruction scheduling, and graph-coloring register allocation. In-depth treatment of algorithms and techniques used in the front end of a modern compiler Focus on code optimization and code generation, the primary areas of recent research and development Improvements in presentation including conceptual overviews for each chapter, summaries and review questions for sections, and prominent placement of definitions for new terms Examples drawn from several different programming languages

Shaping the Future of South Africa's Youth

A Keyword Index

Current Index to Journals in Education, Semi-Annual Cumulation, July-December, 1977

Based on formerly untapped archival sources as well as on interviews of participants, and building upon prior historical literature, Shaping Biology covers new ground and raises significant issues for further research on postwar biology and on federal funding of science in general.

South Africa has made huge gains in ensuring universal enrolment for children at school and in restructuring and recapitalising the FET college sector. However, some three million young people are not in education, employment or training and the country faces serious challenges in providing its youth with the pathways and support they need to transition successfully into a differentiated system of post-school education and training. Across evidence-based chapters, 17 authors offer a succinct overview of the different facets of post-school provision in South Africa. These include an analysis of the impact of the national qualifications system on occupational training, the impact of youth unemployment, the

capacity of the post-school system to absorb larger numbers of young people, the relationship between universities and FET colleges, the need for more strategic public and private investment in skills development, and a youth perspective on education and training policies. The authors have a number of recommendations for improving the alignment between schooling, further education and training, and university education - interventions that will shape the future of our youth.

Analyzing Qualitative Data

Sponsored by the Technical Committee on Structural Design of the Technical Administrative Committee on Analysis and Computation of the Technical Activities Division of the Structural Engineering Institute of ASCE. This report documents the dramatic new developments in the field of structural optimization over the last two decades. Changes in both computational techniques and applications can be seen by developments in computational methods and solution algorithms, the role of optimization during the various stages of structural design, and the stochastic nature of design in relation to structural optimization. Topics include: Ø methods for discrete variable structural optimization; Ø decomposition methods in structural optimization; Ø state of the art on the use of genetic algorithms in design of steel structures; Ø conceptual design optimization of engineering structures; Ø topology and geometry optimization of trusses and frames; Ø evolutionary structural optimization; Ø design and optimization of semi-rigid framed structures; Ø optimized performance-based design for buildings; Ø multi-objective optimum design of seismic-resistant structures; and Ø reliability- and cost-oriented optimal bridge maintenance planning. The book concludes with an extensive bibliography of journal papers on structural optimization published between 1987 and 1999.

This book tackles the challenges of how to make sense of qualitative data. It offers students and researchers a hands-on guide to the practicalities of coding, comparing data, and using computer-assisted qualitative data analysis. Lastly, Gibbs shows you how to bring it all together, so you can see the steps of qualitative analysis, understand the central place of coding, ensure analytic quality and write effectively to present your results.

Sojourning in Disciplinary Cultures describes a multiyear project to develop a writing curriculum within the College of Engineering that satisfied the cultural needs of both compositionists and engineers at a large R1 university. Employing intercultural communication theory and an approach to interdisciplinary collaboration that involved all parties, cross-disciplinary colleagues were able to develop useful descriptions of the process of integrating writing with engineering; overcoming conflicts and misunderstandings about the nature of writing, gender bias, hard science versus soft science tensions; and many other challenges. This volume represents the collective experiences and insights of writing consultants involved in the large-scale curriculum reform of the entire College of Engineering; they collaborated closely with faculty members of the various departments and taught writing to engineering students in engineering classrooms. Collaborators developed syllabi that incorporated writing into their courses in meaningful ways, designed lessons to teach various aspects of writing, created assignments that integrated engineering and writing theory and concepts, and worked one-on-one with students to provide revision feedback. Though interactions were sometimes tense, the two groups—writing and engineering—developed a “third culture” that generally placed students at the center of learning. Sojourning in Disciplinary Cultures provides a guide to successful collaborations with STEM faculty that will be of interest to WPAs, instructors, and a range of both composition scholars and practitioners seeking to understand more about the role of writing and communication in STEM disciplines.
