Part II elaborates the topics in Part I; this part develops and reinforces the techniques, phenomenological principles of diagnosis, diagnostic criteria. The second part also presents data which aid in the delineation of metal disorders. The book will be of great interest to students of behavioral science related degrees. The text will also serve

professional psychologists and psychiatrists as a reference. Psychiatric illnesses are common co-morbidities among patients who are medically ill. Approximately 50% of patients who visit primary care physicians regularly are primarily affected by psychiatric problems. Many primary care physicians (including family physicians and general internists) and other non-psychiatric specialist physicians encounter patients with psychiatric symptoms on a daily basis during their routine practice. Few non-psychiatric physicians, however, feel

comfortable managing psychiatric conditions. This pocket-sized guide is designed to provide a concise, practical overview of the management and treatment of common psychiatric disorders, including such conditions as depression, anxiety, bipolar disorders and schizophrenia. The book will feature an overview of the general practice of Psychiatry, including guidance on mental status examination and diagnosis, neuropsychological assessment, and psychotherapy, as well as a detailed section on psychiatric pharmacotherapies. The remaining chapters of the

book are organized by symptom-based presentations of patients to physicians, rather than by diseases or diagnosis, such as 'The Depressed Patient' or 'The Insomniac Patient.' This unique approach is highly practical and reflects real-world physician experience in clinical settings in assessing and managing psychiatric disorders. Each symptom-based chapter will present a typical patient case followed by an outline of commonly seen symptoms, bedside assessments, diagnosis and differential diagnosis, and treatment options, as well as guidance on when to call for

psychiatric consultation. This book will focus on differentials that will help non-psychiatric physicians gain a greater understanding of psychiatric conditions and will provide directions for triage. The uniqueness of psychiatric problems in co-morbid medical conditions will be described, as well as interventional considerations. This book should serve as a very user-friendly and reliable tool for non-psychiatric physicians, especially for primary care physicians and internists for their daily clinical practice. Written by noted authorities in

When faced with a patient whose psychological symptoms may stem from an organic, or medical, condition rather than psychology, how does the practitioner determine exactly which is the true case? To facilitate this process and give psychologists, social workers, and nurses a useable guide to assessment, Robert Taylor created Psychological Masquerade and has updated it to be the most complete handbook you will ever need in the field. Police officers deal with mental illness-related incidents on an almost daily basis. Ian Cummins explores how factors such as

deinstitutionalisation, community care failings and, more recently, welfare retrenchment policies have led to this situation. He then

considers how police officers should be supported by community mental health agencies to make confident and correct decisions, and to ensure that the individuals they encounter receive support from the most appropriate services. Of interest to police researchers and students of criminology and the social sciences, the book examines police officers' views on mental health work and includes a chapter by a service user.

and residents, this comprehensive text devoted solely to describing the mental status examination (MSE) fills a void in the teaching literature and will be valuable to both students first learning about the MSE and seasoned clinicians seeking an informative reference. The introductory chapter offers basic advice on interviewing patients and eliciting information. Six major sections of the MSE follow and are thoroughly described with a chapter devoted to each: Appearance, Attitude, Activity; Mood and Affect; Speech and Language; Thought Content, Thought Process, and Perception;

Cognition; and Insight and Judgment. Each chapter lists a detailed definition of reference for students describing their findings, and are an insightful review even for experienced practitioners. The clinical relevance of mental status abnormalities is illustrated through frequent examples of disorders that can cause the particular signs and symptoms defined in each chapter. A final chapter describing fictional case histories with hypothetical examples of written mental status reports will be particularly useful for those learning to write such reports. decline, and to provide the most compassionate, valuable treatment possible. It is with this guiding principle in mind that Marc Agronin, a dedicated geriatric clinician with years of on-the-ground experience, offers a sensitively-written and eminently practical guide that addresses the therapeutic challenges, and uncovers the top strategies for compassionate and effective work with the elderly. Therapy with older clients, Agronin argues, requires a

sensitivity to the tension between the body's physical decline and its simultaneous capacity for mental growth and maturation. Therapists must learn to handle these seemingly opposing forces with varying client types and in different settings, and reconcile their own fears of aging, disability, and death. At times this therapeutic relationship can be difficult: medications are often not as effective as they are in younger clients, and the elderly often view change at such

a late stage of life as pointless. However, Agronin encourages therapists to work with

creativity and passion, persisting in their efforts by retooling their approaches, shoring up patience, and remembering that the very presence of a caring listener can bring a spectacular transformation to even the most debilitated individuals. An understanding of aging alone does not make an effective therapist, and Agronin offers key strategies—illustrated

In times of uncertainty and crisis, the mental health of individuals become a concern as added stressors and pressures can cause depression, anxiety, and stress. Today, especially with more people than ever experiencing these effects due to the Covid-19 epidemic and all that comes along with it, discourse around mental health has gained heightened urgency. While there have always been stigmas surrounding mental health, the continued display of these biases can add to an

Despite the experience of mental health issues becoming normalized, it remains important for these issues to be addressed along with adequate education about mental health so that it becomes normalized and discussed in ways that are beneficial for society and those affected. Along with raising awareness of mental health in general, there should be a continued focus on treatment options, methods, and modes for healthcare delivery. The next series of chapters explores the use of novel technologies and approaches in cognitive assessment as they relate to developments in telemedicine, mobile health, and remote monitoring including developing smart environments. While still largely office-based, health care is increasingly moving out of the office with an increased emphasis on connecting patients with providers, and providers with other providers,

Chapters also address the use of technology to enhance cognitive rehabilitation by implementing conceptually-based games to teach cognitive strategies and virtual environments to measure outcomes. Next, the chapters explore the use of virtual reality and scenario-based assessment to capture critical aspects of performance not assessed by traditional means and the implementation of neurobiological metrics to enhance patient

Full-colour illustrations reinforce understanding of the condition while actual case studies demonstrate

contemporary practices and real-life scenarios. ABC of Autism is a valuable resource for GPs, paediatricians, speech therapists, educational psychologists, medical and nursing students, and practitioners responsible for coordinating multidisciplinary care for patients with autism. "This chapter has one chance to make a first impression on the reader. Similarly, the clinician has only one chance to make a first impression on the patient who has

experienced domestic and/or sexual abuse, such that the patient has the confidence to disclose what has happened to her. . She or he may have taken months or years before feeling able to speak about what has happened, so it is essential that they experience a sympathetic, non-judgemental response from the clinician. Descriptions of the positive effects of an empathetic and non-judgemental responses have been given by two female doctors who themselves sought help following sexual violence and domestic abuse, respectively.^{1,2} This positive

response also has the effect of validating the patient's experience of abuse. This chapter aims to describe the magnitude of the problem of domestic and sexual violence and abuse, and cover the important aspects of the initial contact between the clinician and the patient"--Provided by publisher.
