Written by an international team of respected scholars, this updated textbook adopts a critical perspective to examine the core management function of HRM in all its complexity - including its darker sides. Human Resource Management: A Critical Approach opens with a critique of the very concept of HRM, tracing its development over time, and then systematically analyses the context of HRM, practice of HRM and international perspectives on HRM. New chapters commissioned for this second edition look at HRM and the issues of diversity, migration, global supply chains and economic crisis. This textbook is essential reading for advanced and inquisitive students of HRM, and for HRM professionals looking to deepen their understanding of the complexities of their field.**

From beloved indie musician Andrew McMahon comes a searingly honest and beautifully written memoir about the challenges and triumphs of his life and career, as seen through the lens of his personal connection to three pianos. Andrew McMahon grew up in sunny Southern California as a child prodigy, learning to play piano and write songs at a very early age, stunning schoolmates and teachers alike with his gift for performing and his unique ability to emotionally connect with audiences. McMahon would go on to become the lead singer and songwriter for Something Corporate and Jack's Mannequin, and to release his debut solo album, Andrew McMahon in the Wilderness, in 2014. But behind this seemingly optimistic and quintessentially American story of big dreams come true lies a backdrop of overwhelming challenges that McMahon has faced—from a childhood defined by his father's struggle with addiction to his very public battle with leukemia in 2005 at the age of twenty-three, as chronicled in the intensely personal documentary Dear Jack. Overcoming those odds, McMahon has found solace and hope in the things that matter most, including family, the healing power of music and the one instrument he's always turned to: his piano. Three pianos takes readers on a beautifully rendered and bitter-sweet American journey, one filled with inspiration, heartbreak, and an unwavering commitment to shedding our past in order to create a better future.

From acclaimed author Dinaw Mengestu, a recipient of the National Book Foundation's 5 Under 35 award, The New Yorker's 20 Under 40 award, and a 2012 MacArthur Foundation genius grant, comes an unforgettable love story about a searing affair between an American woman and an African man in 1970s America and an unflinching novel about the fragmentation of lives that straddle countries and histories. All Our Names is the story of two young men who come of age during an African revolution, drawn from the safe confines of the university campus into the intensifying clamor of the streets outside. But as the line between idealism and violence becomes increasingly blurred, the friends are driven apart—one into the deepest peril, as the movement gathers inexorable force, and the other into the safety of exile in the American Midwest. There, pretending to be an exchange student, he falls in love with a social worker and settles into small-town life. Yet this idyll is inescapably darkened by the secrets of his past: the acts he committed and the work he left unfinished. Most of all, he is haunted by the beloved friend he left behind, the charismatic leader who first guided him to revolution and then sacrificed everything to ensure his freedom. Elegiac, blazing with insights about the physical and emotional geographies that circumscribe our lives, All Our Names is a marvel of vision and tonal command. Writing within the grand tradition of Naipul, Greene, and Achebe,

Mengestu gives us a political novel that is also a transfixing portrait of love and grace, of self-determination and the names we are given and the names we earn. This eBook edition includes a Reading Group Guide.

A New York Times Best Book of the Year A Time Best Book of the Year A Kirkus Reviews Best Nonfiction Book of the Year 2020 Andrew Carnegie Medals for Excellence Winner From journalist Adam Higginbotham, the New York Times bestselling "account that reads almost like the script for a movie" (The Wall Street Journal)—a powerful investigation into Chernobyl and how propaganda, secrecy, and myth have obscured the true story of one of the history's worst nuclear disasters. Early in the morning of April 26, 1986, Reactor Number Four of the Chernobyl Atomic Energy Station exploded, triggering one of the twentieth century's greatest disasters. In the thirty years since then, Chernobyl has become lodged in the collective nightmares of the world: shorthand for the spectral horrors of radiation poisoning, for a dangerous technology slipping its leash, for ecological fragility, and for what can happen when a dishonest and careless state endangers its citizens and the entire world. But the real story of the accident, clouded from the beginning by secrecy, propaganda, and misinformation, has long remained in dispute. Drawing on hundreds of hours of interviews conducted over the course of more than ten years, as well as letters, unpublished memoirs, and documents from recently-declassified archives, Adam Higginbotham brings the disaster to life through the eyes of the men and women who witnessed it firsthand. The result is a riveting, deeply reported reconstruction" (Los Angeles Times) and a definitive account of an event that changed history: a story that is more complex, more human, and more terrifying than the Soviet myth. "The most complete and compelling history yet" (The Christian Science Monitor), Higginbotham's "superb, enthralling, and necessarily terrifying...extraordinary" (The New York Times) book is an indelible portrait of Dan Dare

The onset of cancer presents one of the most fundamental problems in modern biology. In *Dynamics of Cancer*, Steven Frank produces the first comprehensive analysis of how particular genetic and environmental causes influence the age of onset. The book provides a unique conceptual and historical framework for understanding the causes of cancer and other diseases that increase with age. Using a novel quantitative framework of reliability and multistage breakdown, Frank unifies molecular, demographic, and evolutionary levels of analysis. He interprets a wide variety of observations on the age of cancer onset, the genetic and environmental causes of disease, and the organization of tissues with regard to stem cell biology and somatic mutation. Frank uses new quantitative methods to tackle some of the classic problems in cancer biology and aging: how the rate of increase in the incidence of lung cancer declines after individuals quit smoking, the distinction between the dosage of a chemical carcinogen and the time of exposure, and the role of inherited genetic variation in familial patterns of cancer. This is the only book that presents a full analysis of the age of cancer onset. It is a superb teaching tool and a rich source of ideas for new and experienced researchers. For cancer biologists, population geneticists, evolutionary biologists, and demographers interested in aging, this book provides new insight into disease progression, the inheritance of predisposition to disease, and the evolutionary processes that have shaped organismal design.

households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar goes through-out, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

One of the holy grails in biology is the ability to predict functional characteristics from an organism's genetic sequence. Despite decades of research since the first sequencing of an organism in 1995, scientists still do not understand exactly how the information in genes is converted into an organism's phenotype, its physical characteristics. Functional genomics attempts to make use of the vast wealth of data from "omics" screens and projects to describe gene and protein functions and interactions. A February 2010 workshop was held to determine research needs to advance the field of functional genomics over the next 10-20 years. Speakers and participants discussed goals, strategies, and technical needs to allow functional genomics to contribute to the advancement of basic knowledge and its applications that would benefit society. This publication summarizes the presentations and discussions from the workshop.

One of the most accomplished literary and cultural critics in the world, Fredric Jameson returns to the philosophy of the dialectic in a grand and nuanced study of the concept and those who have developed it. The question of the dialectic remains at the center of contemporary theoretical debates: Is it Hegelian and idealistic? To what degree is it central to Marxism? Is a materialist dialectic really possible? How damaging are the "poststructuralist" critiques of the dialectic by Deleuze, and Laclau and Mouffe? Valences of the Dialectic addresses these questions, and studies individual thinkers both dialectical and anti-dialectical, from Hegel and Fichte to Heidegger, Sartre, Derrida, Deleuze and Lacan.

The Triumph 350cc and 500cc unit-construction twins were called the 'C' Series, and were made between 1957 and 1974. The range started with the 350cc 'Twenty-one' - a sedate touring bike with full enclosure in the form of the famous Triumph 'Bathtub' - went through such famous names as the Speed Twin, Tiger 100 and Trophy, and ended with the rip-roaring Daytona and the off-road Adventurer. This book deals with the whole range, giving the history of all the models, and also describes the restoration of a 1969 Trophy T100C.

Hoewel enorm invloedrijk in Duitsstalig Europa, heeft de conceptuele geschiedschrijving (Begriffsgeschichte) tot nu toe weinig aandacht in het Engels vertalen. Dit genre van intellectuele geschiedschrijving verschilt van zowel de Franse geschiedschrijving van mentalités als de Engelstalige geschiedschrijving van verhandelingen door het concept. Aan de hand van praktische voorbeelden in de geschiedschrijving wordt deze vorm toegelicht door Bram Kempers, Eddy de Jongh en Rolf Reichardt.
