*The Routledge Handbook of Public Transport is a reference work of chapters providing in-depth examination of the current issues and future developments facing public transport. Chapters in this book are dedicated to specific key topics, identifying the challenges therein and pointing to emerging areas of research and concern. The content is written by an international group of expert contributors and is enhanced through contributions from practitioners to deliver a broader perspective. The Handbook deals with public transport policy context, modal settings, public transport environment, public transport delivery issues, smart card data for planning and the future of public transport. This comprehensive reference work will be a vital source for academics, researchers and transport practitioners in public transport management, transport policy and transport planning.*

*Effective measurement of the composition and properties of petroleum is essential for its exploration, production, and refining; however, new technologies and methodologies are not adequately documented in much of the current literature. Analytical Methods in Petroleum Upstream Applications explores advances in the analytical methods and instrumentation that allow more accurate determination of the components, classes of compounds, properties, and features of petroleum and its fractions. Recognized experts explore a host of topics, including: A petroleum molecular composition continuity model as a context for other analytical measurements A modern modular sampling system for use in the lab or the process area to collect and control samples for subsequent analysis The importance of oil-in-water measurements and monitoring The chemical and physical properties of heavy oils, their fractions, and products from their upgrading Analytical measurements using gas chromatography and nuclear magnetic resonance (NMR) applications Asphaltene and heavy ends analysis Chemometrics and modeling approaches for understanding petroleum composition and properties to improve upstream, midstream, and downstream operations Due to the renaissance of gas and oil production in North America, interest has grown in analytical methods for a wide range of applications. The understanding provided in this text is designed to help chemists, geologists, and chemical and petroleum engineers make more accurate estimates of the crude value to specific refinery configurations, providing insight into optimum development and extraction schemes.*

It particularly emphasises the use of computer systems in advanced railway engineering. Topics covered include: Timetable planning; Computer simulations; Actual train control; Operations quality; Risk management; Planning; Monitoring and maintenance; Energy supply and consumption; Communications and signalling; Rescheduling; Safety and security; Railway vehicle dynamics; Driverless and automatic train operation.*

*With over 60 per cent of the world's population living in cities, the networks beneath our feet – which keep the cities above moving – are more important than ever before. Yet we know little about these amazing feats of engineering work. Just how deep do the tunnels go? Where do the sewers, bunkers and postal trains run? And, how many tunnels are there under our streets? This city presents a 'skyline of the underground' through specially commissioned cut-away illustrations and unique cartography. Drawing on geography, cartography and historical oddities*

Ovenden explores what our cities look like from the bottom up.

*Following on from Helen Constantine's hugely successful Paris Tales, the twenty-two short stories included in More Metro Tales take the reader on an fascinating journey around Paris by metro. The journey begins at the Gare du Nord, stops at twenty underground stations along the way, and ends at Lamarck-Caulaincourt. Some of these stories actually take place in the metro itself, but most are to be found when you emerge above ground. They range from the 15th-century account of the miraculous Saint Genevieve, patron saint of Paris, through tales by favourite writers such as Zola, Simenon, and Maupassant, to Martine Delerm's evocation of the last hours of Modigliani's mistress, Jeanne Hébuterne. Gérard de Nerval evokes the thriving, bustling market in Les Halles in the 1850s; Colette recounts her involvement in a traffic accident near the Opéra; Boulanger describes a blackly funny experience in Père Lachaise. Each story is illustrated with a black-and-white photograph and there is a map and suggested itinerary round the metro system. Readers will find familiar and unfamiliar writers here, but all are masterly writers of the short story and each evokes a different aspect of this endlessly intriguing and much-loved city, whether the traveller is on the metro or at home sitting in an armchair.*

*The contemporary urban experience is defined by flow and structured by circulating people, objects, and energy. Geographers have long provided key insights into transportation systems. But today, concerns for social justice and sustainability motivate new, critical approaches to mobilities. Reimagining the city prompts an important question: How best to rethink urban geographies of transport and mobility? This original book explores connections - in theory and practice - between transport geographies and "new mobilities" in the production of urban space. It provides a broad introduction to intersecting perspectives of urban geography, transport geography, and mobilities studies on urban "places of flows." Diverse, international, and leading-edge contributions reinterpret everyday intersections as nodes, urban corridors as links, cities and regions as networks, and the discourses and imaginaries that frame the politics and experiences of mobility. The chapters illuminate nearly all aspects of urban transport, from street regulation and roadway planning, intended and "subversive" practices of car and truck drivers, planning and promotion of mass transit investments, and the restructuring of freight and logistics networks. Together these offer a unique and important contribution for social scientists, planners, and others interested in the politics of the city on the move.*

*A history of Paris in twelve métro stops. Métro Stop Paris recounts the extraordinary and colorful history of the City of Light, by way of twelve Métro stops-a voyage across both space and time. At each stop a Parisian building, or street, or tomb or landmark sparks a story that holds particular significance for that area of the city. Dallas takes us to the jazz cellars and literary cafés of Montparnasse and Saint-Germain-des-Prés; the catacombs at Hell's Gate; and the Opéra during the days of Claude Debussy. A darker side of Paris emerges at the Trocadéro stop and a charitable side at the Gare du Nord, which highlights the work of Saint Vincent de Paul. Finally, our journey ends at Père-Lachaise cemetery with the little-known story of Oscar Wilde's curious involvement in the Dreyfus affair, one of France's greatest legal scandals. From Hell (the Denfert-Rochereau stop on the south side of the city) to Heaven (the Gare du Nord at the north end of Paris), Métro Stop Paris carries readers on a journey of the heart and mind. Métro Stop Paris is a thinker's guide to Paris made up of "slices of life," little vignettes drawn from Paris's two thousand years of history. Taken separately, these are charming historic tales about a city known and loved by many, but read as a whole Métro Stop Paris goes straight to the heart of what is quintessentially Parisian.*

Join award-winning podcaster Oliver Gee on this laugh-out-loud journey through the streets of Paris. He tells of how five years in France have taught him how to order cheese, make a Parisian person smile, and convince anyone you can fake French (even if, like Oliver, you speak the language like an Australian cow). A fresh voice on the Paris scene, he shares the soaring highs and crushing lows that come with following your dreams to the French capital. He also befriends the city's too-cool-for-school basketballers, chases runaway crocodiles, and goes on a mammoth honeymoon trip around France on his little red scooter.

**&quot;This book assembles the practical rules and details for the efficient and economical execution of deep excavations. It draws together a wealth of experience of both design and construction from published work and the lifetime practice of the author. This second edition is extensively revised to include changes in design emphasis including those due to Eurocode 7 and descriptions of the latest equipment, construction techniques and geotechnical processes. Additional details include those of the latest piling and diaphragm wall equipment and innovations in top-down construction applied to basements and cut-and-cover works. The section on caissons has been expanded to include design methods."--BOOK JACKET.**

**Read stories inspired by the four Underground lines that run East and West through city - part of a series of twelve books tied to the twelve lines of the London Underground, as TfL celebrates 150 years of the Tube with Penguin. The District Line: John Lanchester, author of Whoops! and Capital takes us on a whirlwind tour of the Tube to show its secrets, just how much we take for granted about it, and what we're really talking about, since we so often do talk about it. In short, he shows what a marvel it is. The Central Line: Geographer Danny Dorling tells the stories of the people who live along 32 stops of the Central Line to illustrate the extent and impact of inequality in Britain today. The Piccadilly Line: Peter York, co-author of the 80s bestseller, The Sloane Ranger Handbook charts the progress of the dream of grandeur and aspiration in London and chronicles London's elites. The Hammersmith & City Line: Artist and filmmaker, Philippe Parreno, who created the documentary Zidane: A 21st Century Portrait, takes us on a unique voyage through London - a journey without the typical purposes of a journey, an artistic, psychogeographical path.**

*A completely updated and expanded edition of the cult bestseller, featuring subway, light rail, and streetcar maps from New York to Nizhny Novgorod. Transit Maps of the World is the first and only comprehensive collection of historical and current maps of every rapid-transit system on earth. In glorious, colorful graphics, Mark Ovenden traces the cartographic history of mass transit—including rare and historic maps, diagrams, and photographs, some available for the first time since their original publication. Now expanded with thirty-six more pages, 250 city maps revised from previous editions, and listings given from almost a thousand systems in total, this is the graphic designer's new bible, the transport enthusiast's dream collection, and a coffee-table essential for everyone who's ever traveled in a city.*

*Ladies and Gentlemen, welcome aboard. My name is Larry Kritcher, and I will be your captain for this evenings flight. I recommend you keep your seat belts tightly fastened--we will be flying near high peaks and into low valleys of true travel tales and some bumpy air will be expected. This book is about my lifetime of travel. Sometimes my curiosity has taken me past normal boundaries.*

*Although not a thrill seeker, some of the stories, as you will see, clearly have strayed beyond a normal life of work and play. I have always had a voracious desire for travel, coupled with a love of our worlds cuisine. Many photographs have been included with these stories, proving again, a picture is worth a thousand words. I suitably represent my slogan--If you love what you do, you will never work a day in your life.*

*Winner of a Lowell Thomas Award from the Society of American Travel Writers Foundation, the Gold Prize from the North American Travel Journalists Association, and a Silver in the National Parenting Publications Awards competition for parenting Resources. Travels with Baby, by celebrated family travel author and blogger Shelly Rivoli, helps parents plan every trip they'll take with their child from birth through 4 years. In addition to the major modes of transport covered in great detail--air travel (50 pgs.), travels by automobile (40 pgs.), cruise vacations (31 pgs.), rail travel (53 pgs. Including USA, Canada & Europe)--this "Ultimate Guide" also includes advice for traveling with children of different temperaments, health and safety considerations, suggestions for where to travel when during a child's first years, packing lists and travel-friendly baby gear recommendations, and more. As the Society for American Travel Writers Foundation declared, this guide is "...a must have even for families who only travel occasionally."*

*Urban Transport XXI contains the proceedings of the 21st International Conference on Urban Transport and the Environment. The series of annual conferences organised by the Wessex Institute was first held in 1995. Transportation in urban areas, with its related environmental and social impacts, is a topic of significant concern for policymakers in both municipal and central government and for the urban citizens who need effective and efficient transport systems. Urban transport systems require considerable studies to devise and then safeguard their operational use, maintenance and safety. Transportation systems produce significant environmental impacts and can enhance or degrade the quality of life in urban centres. Clearly the challenge of providing effective and efficient transport systems in urban settings remains an acute concern, with financial, political and environmental constraints limiting the ability of transport system planners and operators to deliver the high quality outcomes expected by the public. Papers cover such topics as: Urban Transport Planning and Management; Urban Transport Strategies; Public Transport Systems; Environmental Aspects; Economic and Social Impact; Safety and Security; Travel Behaviour Studies; Customer Satisfaction; Transportation Modelling and Simulation; Infrastructure Development; Intelligent and Advanced Transport Systems; Transportation Integration; City Logistics; Resilience and Inter-modal Transport Systems; Mass Transport Strategies; Social Impacts; Freight Transport; Railway Systems;*

'Not only travelers but Parisians will have the Paris Metro explained by perusing this book in ways they never have before. An absolutely essential guide to really knowing Paris.' observes Robert Cole, author of "A Traveller's History of Paris". What was the original name of the Place de la Concorde? Why was the Tuileries palace so called and when was it destroyed? Who built the Palais Royal? Find the answers to these questions and many others in this fascinating new book, which gives you the history behind the names of all the Metro stations in Paris. Arnold Delaney's text is full of illuminating insights into hidden corners of the history of the world's most elegant city. Take Le Kremlin - Bicetre, an intriguing example of how, over many centuries, names evolve and become corrupted: "...known for its Bicetre Hospital, parts of which date back to the seventeenth century. The town's website explains that the Kremlin portion of the name is due to the fact that after Napoleon's retreat from Moscow in 1812 a hospice for his soldiers was set up in the town and the local pub was called Le Sergent du Kremlin. Bicetre came about because at the end of the thirteenth century Jean de Pontoise the Bishop of Winchester owned land here. The locals had difficulty pronouncing Winchester which became Vincestre and evolved to become Bicetre." The text is complemented by colour photography especially commissioned for the book, which takes a slightly idiosyncratic look at the city as well as giving a taste of the quintessential design and feel of the Metro system.

An authoritative, quirky trivia book divided into themed chapters. Whitaker's Little Book of Knowledge contains thousands of general knowledge gems: from everything you learned at school to fascinating lists of contemporary 'top-tens', mini-biographies of famous artists and writers, plus condensed guides to films and works of art and literature. In addition, there is a light-hearted journey down memory lane featuring humorous entries on forgotten treasures from different decades and a stand-alone sport chapter with guides to both well-known and obscure sports, key rules, a glossary of terms and short biographies of the world's greatest sporting heroes. Facts are both newly researched and drawn from the rich treasure-trove of the Whitaker's Almanack archive, which dates back to 1868. Whitaker's Little Book of Knowledge is a truly unique ready-reference containing fascinating facts for every trivia buff while providing a unique insight into the world from the 19th century through to the present day.

This gentle and incredibly poignant picture book tells the true story of how one baby found his home. "Some babies are born into their families. Some are adopted. This is the story of how one baby found his family in the New York City subway." So begins the true story of Kevin and how he found his Daddy Danny and Papa Pete. Written in a direct address to his son, Pete's moving and emotional text tells how his partner, Danny, found a baby tucked away in the corner of a subway station on his way home from work one day. Pete and Danny ended up adopting the baby together. Although neither of them had prepared for the prospect of parenthood, they are reminded, "Where there is love, anything is possible."

He slips through the hedgeow and in no time is seen sitting on the bench surprised by it all. In the shadow of Old Sarum he sits. Salisbury is in sight. It slopes slowly from the old to the new. Now hungry and not too sure what to do about the rue he concludes... 'I can live with the hunger for a bit... but the thirst I can't.' He finds a thrown water bottle and heads into town down a road sloping into Salisbury. Just short of the town, he passes by a park and spots a fountain. He doesn't think he just drinks, with thirsty urgency. He rinses then fills up his bottle. Rote returns to his hideaway without even venturing into the town proper. He's pickled by the predicament. He's embarrassed. His pride is really riding him. He's unable to make eye contact with people passing by. Back at the bench he crawls back into the bushes when no one's looking. He pulls out his orange plastic bag and his basically brand new sleeping bag that after last night looks old. It's not even midday yet. He doesn't want anyone to see him. He has no money. He has no food. He has water. He has a briar bush for a home. It's wet and always leaking. It's infested with all

sorts of crawling things. And there's garbage strewn here and there. Some of it is blown in and then torn by dogs. He's fraught with the facts—he's fucked. That afternoon and night he stays burrowed in his bane going insane, wrestling with his dilemma. He's haunted and daunted by his hunger. He tries to ignore his starving stomach. He tries to hide his pride. The following morning he awakes slobbered with saliva, washed with froth from another friendly face, truly a restoring grace. Those dogs delight him in their exuberance upon discovering a bushwhacked bum. Aye, a found friend, wagging him well with a non-judgmental manner. It means a whole lot. They in their way, help to raise Rote's spirits by letting him know it's okay and to keep his chin up. Upon packing his pack with his makeshift shack, he burrows them back away and begins his day. Out from behind his bespoke bench he crosses the park. Onto the road he strolls, stirring up a sense of purpose to feed his belly and starve his pride. His pride is like a life preserver; it will buoy him back on track. He passes through the subterranean pedestrian passage under the roundabout of traffic alongside the Avon River. He continues along the road now into Salisbury proper. Only to be stopped by his propped pride, a pill still too ill to swallow. He returns to wallow. Back in his burrow with a deep furrow, he struggles with it all. Oh his pride. And as the day turns into night he struggles some more. Unable to sleep, racked with rancour for the heel he has to hallow. As the sun rises so his spirits, and by the lavish licking, he surrenders too. It brings a smile to his face. Hunger soon supersedes all qualms with his pride. He proceeds to Salisbury proper. He's struggled enough and to no end, with the thought and the need thereof of begging. And boy is it a proud pill to swallow. It's in his best interest. At that point, he doesn't see any other way of collecting coins to curb his hunger pangs and his tobacco withdrawals... great motivating factors for sure. He's desperate. He's defiantly delayed any render to surrender that in turn will chide his pride. He tries to fend the facts, but faced with them there really is no other possible play. He's forced to say, "Excuse me... but can you spare some change." A truly inspired story steeped in history that starts with Rote sending his manuscript overseas to London England.

*Formerly titled Traveling Europe's Trains, this is a superb guidebook to getting around Europe and Britain from Manchester to Moscow by high-speed, and scenic train, ferry, and Europabus.*

*IELTS Essential Words offers students extensive practice in vocabulary building and in correct English usage, with emphasis on 600 English words that appear frequently on IELTS exams. Author Lin Lougheed presents exercises that teach ESL students how to decipher the meanings of new words by reading or by hearing them in the context that they are used.. You'll find helpful strategies for learning and retaining word meanings, tips on analyzing unfamiliar compound words to determine their meanings, and vocabulary expanding exercises with answers in every chapter. Also included are recommendations for web-based self-study activities. The included downloadable MP3 Files present all of the listening comprehension exercises.*

*This glorious visual celebration of train travel keeps you on the right track with stop-offs at the most important and incredible rail routes from all over the world. Your first stop in The Train Book is the groundbreaking steam locomotives of the 19th century and your final destination is the high-speed bullet trains of today. From the Union-Pacific Railroad to the Trans-Siberian Railway, you'll cross the continents to experience epic journeys and staggering scenery. You'll pick a seat on the most iconic locomotives, including the Orient Express, the Blue Train, and the Eurostar. You can also inspect the engines of famous British trains, such as Rocket, Mallard, and Javelin, and international trains, such as India's Palace on Wheels and America's Thatcher Perkins. You'll meet the true pioneers of train and track, including "Father of the Railways" George Stephenson, engineering legend Isambard Kingdom Brunel, and Métro maestro Fulgence Bienvenüe. For train-spotters and transport enthusiasts everywhere, this is your trip of a lifetime.*

*Non-Exhaust Emissions: An Urban Air Quality Problem for Public Health comprehensively summarizes the most recent research in the field, also giving guidance on research gaps and future needs to evaluate the health impact and possible remediation of non-exhaust particle emissions. With contributions from some of the major experts and stakeholders in air quality, this book comprehensively defines the state-of-the-art of current knowledge, gaps and future needs for a better understanding of particulate matter (PM) emissions, from non-exhaust sources of road traffic to improve public health. PM is a heterogeneous mix of chemical elements and sources, with road traffic being the major source in large cities. A significant part of these emissions come from non-exhaust processes, such as brake, tire, road wear, and road dust resuspension. While motor exhaust emissions have been successfully reduced by means of regulation, non-exhaust emissions are currently uncontrolled and their importance is destined to increase and become the dominant urban source of particle matter by 2020. Nevertheless, current knowledge on the non-exhaust emissions is still limited. This is an essential book to researchers and advanced students*

from a broad range of disciplines, such as public health, toxicology, atmospheric sciences, environmental sciences, atmospheric chemistry and physics, geochemistry, epidemiology, built environment, road and vehicle engineering, and city planning. In addition, European and local authorities responsible for air quality and those in the industrial sectors related to vehicle and brake manufacturing and technological remediation measures will also find the book valuable. Acts as the first book to explore the health impacts of non-exhaust emissions Authored by experts from several sectors, including academia, industry and policy Gathers the relevant body of literature and information, defining the current knowledge, gaps and future needs

*An exciting new generation of railway architecture has emerged in Europe and elsewhere over the past decade. This book explains the reasons for the renaissance of the station as a building type and the current changes it is undergoing. The functional, social and technical factors which shape railway architecture are examined. As stations are essential elements of sustainable development, the environmental benefits of railways are also discussed. Essential guidance is provided for those who design, commission or manage railway stations. By drawing on technical design manuals and examples of recent stations (many designed by leading architects) the book gives help and instruction to all those with an interest in the future of railway architecture.*

*Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art contains the contributions presented at the World Tunnel Congress 2019 (Naples, Italy, 3-9 May 2019). The use of underground space is continuing to grow, due to global urbanization, public demand for efficient transportation, and energy saving, production and distribution. The growing need for space at ground level, along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives, demand greater and better use of the underground space to ensure that it supports sustainable, resilient and more liveable cities. This vision was the source of inspiration for the design of the logos of both the International (ITA) and Italian (SIG) Tunnelling Association. By placing key infrastructures underground – the black circle in the logos – it will be possible to preserve and enhance the quality of the space at ground level – the green line. In order to consider and value underground space usage together with human and social needs, engineers, architects, and artists will have to learn to collaborate and develop an interdisciplinary design approach that addresses functionality, safety, aesthetics and quality of life, and adaptability to future and varied functions. The 700 contributions cover a wide range of topics, from more traditional subjects connected to technical challenges of design and construction of underground works, with emphasis on innovation in tunneling engineering, to less conventional and archetypically Italian themes such as archaeology, architecture, and art. The book has the following main themes: Archaeology, Architecture and Art in underground construction; Environment sustainability in underground construction; Geological and geotechnical knowledge and requirements for project implementation; Ground improvement in underground constructions; Innovation in underground engineering, materials and equipment; Long and deep tunnels; Public communication and awareness; Risk management, contracts and financial aspects; Safety in underground construction; Strategic use of underground space for resilient cities; Urban tunnels. Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art is a valuable reference text for tunneling specialists, owners, engineers, architects and others involved in underground planning, design and building around the world, and for academics who are interested in underground constructions and geotechnics.*

*A historian and lifelong Francophile takes readers on a fascinating journey through the ages, revealing a rarely seen Paris, as he, using 21 stops of the subway system as focal points, reveals the often violent events that shaped one of the world's most romanticized city. 50,000 first printing.*

*A box set containing the first three thrillers featuring troubled PI Adam Park, the popular series that thrusts a detective from the sleazy corporate world into a hard-boiled existence where he must access the darkest corners of his soul to survive. The Dead and the Missing A brutal international underworld. A lost girl. A PI who will burn it all. Adam Park is an ex-private investigator, now too wealthy to need a job. But when his old mentor's niece rips off a local criminal and flees the UK, Adam tracks the young woman and her violent, manipulative boyfriend through the Parisian underground. Here, and onward in Asia, he learns of a brutal criminal enterprise for whom people are just a business commodity. To return the girl safely and protect the ones he loves, Adam will need to burn down his concepts of right and wrong, at any cost to his soul. Review from Readers' Favourite: The Dead and the Missing is loaded with twists and turns and excitement, and had me holding my breath in fear several times, never being one hundred percent sure of how it would end. A.D. Davies is a very talented author. A*

*Desperate Paradise* With a damaging, violent case behind him, Adam Park is happy tending to his late mother's canal barge and catching up on his reading. Unfortunately, he owes favors, and when the parents of an aid worker is murdered on the Greek island of Paramatra believe the investigation is deeply flawed, one such favor is called in. With the island struggling to cope with an influx of refugees, Adam must battle corruption and ruthless smuggling gangs, all amid people so desperate they will do anything to reach the paradise of the west. If he cannot stay the course and dig out the truth, a murderer will go free, and Adam will fall prey to the same evil. *The Shadows of Empty Men* When Adam Park is retained to confirm the accuracy of a young heiress's family tree, it sounds like the simple case he needs to break the monotony of life on an Aegean island. But it soon becomes clear that others wish to stake a claim to the girl's fortune, and something as inconvenient as a private investigator will not stand in their way. Delving into a decades-old secret that people will murder to protect, Adam must fight smart and fight hard—against a seemingly supernatural mercenary, against people of unfathomable greed, and against his own darkening nature. D. Davies is also the author of the Detective Sergeant Alicia Friend novels, plus a number of stand-alone books.
