Service-learning is entering a post-initiatory phase. At tertiary institutions of all types and sizes, service-learning programs are common and service-learning requirements for graduation are growing in popularity. Taken together -- alongside continued faculty interest in effective teaching -- these factors have raised the visibility and popularity of service-learning. Now the greater need in service-learning is not to prove the need for, or efficacy of, service-learning, but to turn the focus squarely back on practice.

Following established best practice is not enough; instructors also need to reflect on how this fits within the specific context and application of each unique course and service-learning partnership. While there are many excellent resources that detail best practice and showcase exemplary service-learning courses, faculty reflection and course revision often goes unmentioned. In response to the lack of attention on the role of reflection and course revision, we convened groups of faculty from a variety of disciplines to reflect deeply on their courses, paying specific attention to obstacles and challenges. These conversations were converted to articles for this edited collection, each chapter representing the process of reflection and revision and serving as a guide to develop effective practice in varied curricular contexts. This text contributes to the body of literature on service-learning in a unique and practical manner. Faculty teaching or interested in teaching service-learning classes would benefit from this text as well as university administrators and community service directors involved in service-learning at a programmatic and institutional level. This book should be marketed to faculty teaching disciplinary service-learning classes and service-learning pedagogy classes and administrative offices involved in service-learning. This could be a supplementary text for graduate-level pedagogy courses. Higher

education institutional libraries would benefit from this text, as well as the national and state campus compact offices. It's true that state standards often have way too much content and aren't written in a way that enhances classroom instruction and formative assessment. That's why this guide is invaluable for any educator who wants to ensure that standards actually lead to higher student achievement. The authors give you good reasons for why some content standards should be dropped and explain how benchmark statements in standards should be rewritten. Learn how to sequence content and set up grading scales that help facilitate formative assessment and effective instruction. And get clear steps for unpacking and converting standards into guidelines that are much more useful to classroom teachers. To implement this book's much more efficient approach, the authors included over 240 pages of detailed scoring scales and sample measurement topics for k-8 science, math, language arts, social studies, and critical life skills topics for elementary through high school students. *Understanding Computers in a Changing Society* gives your students a classic introduction to computer concepts with a modern twist!
