Includes index.

This fully updated edition presents practices and principles applicable for the reconstruction of automobile and commercial truck crashes. Like the First Edition, it starts at the very beginning with fundamental principles, information sources, and data gathering and inspection techniques for accident scenes and vehicles. It goes on to show how to analyze photographs and crash test data. The book presents tire fundamentals and shows how to use them in spreadsheet-based reverse trajectory analysis. Such methods are also applied to reconstructing rollover crashes. Impacts with narrow fixed objects are discussed. Impact mechanics, structural dynamics, and conservation-based reconstruction methods are presented. The book contains a comprehensive treatment of crash energy and how to develop structural stiffness properties from crash test data. Computer simulations are reviewed and discussed. Extensively revised, this edition contains new material on side pole impacts. It has entirely new chapters devoted to low-speed impacts, downloading electronic data from vehicles, deriving structural stiffness in side impacts, and incorporating electronic data into accident reconstructions

Collision Estimating Guide Imported

The authors provide an organized source of examples of Library of Congress cataloguing practice according to Anglo-American Cataloguing Rules, Second Edition (AACR 2) and seek to save the cataloger's time and assist them in maintaining consistency in their catalogs. The examples are arranged by AACR 2 rule numbers. The book includes numerous examples of descriptive cataloguing and of serial cataloguing, while it does not include examples of chapters 7-11 of the rules, which cover motion-pictures and video recordings, graphic materials, machine readable data files, three-dimensional artifacts and microforms, and of rules covering geographic names and references. Throughout the book, few examples are given for rules requiring little or no interpretation and many when individual judgement is required. ISBN 0-8108-1683-0 : \$19.50 (For use only in the library).

COLLISION REPAIR AND REFINISHING: A FOUNDATION COURSE FOR TECHNICIANS, 2E covers all the major areas of collision repair and refinishing as outlined by NATEF. In-depth coverage includes structural and non-structural analysis and damage repair, welding, painting and refinishing, paint chemistry, sacrificial coatings for corrosion resistance, mechanical & electrical systems, and more. The logical progression of topics and easy-to-understand writing style are perfect for students with little or no prior exposure to collision repair. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.
