Protection of Industrial Designs of Useful Articles

This is a comprehensive series of 5 ASE test preparation booklets; they cover the tests for Collision Repair. These books are intended for any automotive technician who is preparing to take an ASE examination. These books combine refresher materials with an abundance of sample test questions, as well as a wealth of information regarding test-taking strategies and the ASE exam style.

New Serial Titles

Information trade directory

This fully updated edition presents practices and principles applicable for the reconstruction of automobile and commercial truck crashes. Like the First Edition, it starts at the very beginning with fundamental principles, information sources, and data gathering and inspection techniques for accident scenes and vehicles. It goes on to show how to analyze photographs and crash test data. The book presents tire fundamentals and shows how to use them in spreadsheet-based reverse trajectory analysis. Such methods are also applied to reconstructing rollover crashes. Impacts with narrow fixed objects are discussed. Impact mechanics, structural dynamics, and conservation-based reconstruction methods are presented. The book contains a comprehensive treatment of crush energy and how to develop structural stiffness properties from crash test data. Computer simulations are reviewed and discussed.

Extensively revised, this edition contains new material on side pole impacts. It has entirely new chapters devoted to low-speed impacts, downloading electronic data from vehicles, deriving structural stiffness in side impacts, and incorporating electronic data into accident reconstructions

LC and AACR 2

The authors provide an organized source of examples of Library of Congress cataloguing practice according to Anglo-American Cataloguing Rules, Second Edition (AACR 2) and seek to save the cataloger's time and assist them in maintaining consistency in their catalogs. The examples are arranged by AACR 2 rule numbers. The book includes numerous examples of descriptive cataloguing and of serial cataloguing, while it does not include examples of chapters 7-11 of the rules, which cover motion-pictures and video recordings, graphic materials, machine readable data files, three-dimensional artifacts and microforms, and of rules covering geographic names and references. Throughout the book, few examples are given for rules requiring little or no interpretation and many when individual judgement is required. ISBN

0-8108-1683-0 : \$19.50 (For use only in the library).
