This book analyses Rabindranath Tagore's contribution to Bengali drama and theatre. Throughout this book, Abhijit Sen locates and studies Rabindranath's experiments with drama/theatre in the context of the theatre available in nineteenth-century Bengal, and explores the innovative strategies he adopted to promote his 'brand' of theatre. This approach finds validation in the fact that Rabindranath combined in himself the roles of author-actor-producer, who always felt that, without performance, his dramatic compositions fell short of the desired completeness. Various facets of his plays as theatre and his own role as a theatre-practitioner are the prime focus of this book. This book will be of great interest to students and scholars in Theatre and Performance Studies and most notably, those focusing on Indian Theatre and Postcolonial Theatre.

It's the second half of the twenty-first century. The advent of the next industrial revolution has brought forth a new series of automation - machines that can perform any task safer, faster, better, and cheaper than any human ever could. With their introduction, unemployment levels soar, trade collapses, and the world falls into ruin. China becomes a closed state, Germany remains the only nation in Europe to retain stability, and the role of the United States government shifts primarily into a position of humanitarian aid for its own citizens. With this vast computational ability, however, comes a new possibility: artificial emulation of human consciousness, and with it, the creation of IEBs. These non-human citizens roam the streets, interact with the people that came before them, and work to determine their meaning. Their existence alone is enough to change the face of mankind forever.

The Story of a Legend & Pat Foster's award-winning The Story of Jeep is back - bigger, more colorful, and more complete than ever. With updates on models from 2000 through 2005, Foster's new tribute to "the world's greatest fighting machine" is an essential part of any Jeep lover's library. In this history-packed, full-color second edition, the country's preeminent Jeep writer and historian details Jeep's roller-coaster history, from the early war-time prototypes, to the Kaiser and AMC eras, to the big buyout by Chrysler. With the help of more than 400 photos, Foster expertly tells the tale of how Jeep has evolved from a military workhorse, to 4x4 pioneer, to popular family hauler, all the while retaining its place as a great American icon.

The Economics of Alfred Marshall brings together a number of leading international scholars for a timely reappraisal of Marshall's contribution to the development of economics. The aims of the contributors are firstly to revisit the work of Alfred

Marshall and to investigate the unity of his projects, which contemporary authors often tend to underestimate; and secondly to show how Marshall's approach is not only a subject for historians of economic thought, but may also provide a message that is relevant for the progress of economics.

Seventy-five percent of processed foods on supermarket shelves—from soda to soup, crackers to condiments—contain genetically engineered ingredients. The long-term effects of these foods on human health and ecology are still unknown, and public concern has been steadily intensifying. This new book from the Council for Responsible Genetics

gathers the best, most thought-provoking essays by the leading scientists, science writers, and public health advocates. Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really controls the power structure of food production? Are GM foods ecologically safe and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, of lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.
