describes a practical approach to integrating academic and vocational education, focusing on achieving a seamlessly integrated curriculum. Chapter 1 describes the rationale of a high school program--the Cocoa Academy for Aerospace Technology (CAAT) in Brevard County, Florida--that combines aerospace technology with traditional education. Chapter 2 discusses the role of technology in education and CAAT's use of technology-learning activities (TLAs), which are hands-on, interdisciplinary, problem-solving activities. Movement toward CAAT's system of learning, called "virtual learning," is

described in chapter 3. In virtual learning, students and facilitators teach each other how to learn; the curriculum blends a range of disciplines; students learn in teams; facilitators teach in teams; all problem-solving activities have real-world relevancy; and authentic assessment is used to evaluate learning objectives. Examples of virtual-learning activities are provided in the fourth chapter. Chapters 5 through 8 describe the process for developing a curriculum framework and learning objectives, the steps for writing virtual-learning activities, and ways to sustain the program. The final

There were 480 companies in the World Trade Center in NYC.

Only 230 companies had a disaster recovery plan in place. 100 companies probably did not need one due to their small size.

Which leaves 160 companies that did not have a plan in place and as a result they will not be around a year from now! This book explains to system administrators and architects what they need to know to plan for and get through disaster recovery. It incorporates the latest technologies in data storage, networks, server systems, and the Internet (Web-based recovery planning and crisis management) and shows how they can become components of a corporate survival strategy for

future disasters. This third edition is completely revised and updated to reflect new information on data storage topologies, challenges for recovery, problem of data re-hosting as well as coverage of latest technologies and trends. The book also covers the lessons learned from WTC disaster and includes references to the California power outages, new mailroom procedures--due to anthrax scares--and new physical access controls that enable you to know where everyone is in a building by tagging them with an electronic badge.

This third edition of a classic textbook can be used to teach at the senior undergraduate and graduate levels. The material concentrates on fundamental theories as well as techniques and algorithms. The advent of the Internet and the World Wide Web, and, more recently, the emergence of cloud computing and streaming data applications, has forced a renewal of interest in distributed and parallel data management, while, at the same time, requiring a rethinking of some of the traditional techniques. This book covers the breadth and depth of this re-

emerging field. The coverage consists of two parts. The first part discusses the fundamental principles of distributed data management and includes distribution design, data integration, distributed query processing and optimization, distributed transaction management, and replication. The second part focuses on more advanced topics and includes discussion of parallel database systems, distributed object management, peer-to-peer data management, web data management, data stream systems, and cloud computing. New in this Edition: • New chapters, covering database replication, database integration, multidatabase query processing, peer-to-peer data management, and web data management. • Coverage of emerging topics such as data streams and cloud computing • Extensive revisions and updates based on years of class testing

Recently, there has been a lot of interest in provably "good" pseudo-random number generators [10, 4, 14, 31]. These cryptographically secure generators are "good" in the sense that they pass all probabilistic polynomial time statistical tests. However, despite these nice properties, the secure generators known so far suffer from the handicap of being inefficient; the most efficient of these take n^2 steps (one modular multiplication, n being the length of the seed) to generate one bit. Pseudo-random number generators that are currently used in practice output n bits per multiplication (n^2 steps). An important open problem was to output even two

Online Library Mks Implementer Documentation

bits on each multiplication in a cryptographically secure way. This problem was stated by Blum, Blum & Shub [3] in the context of their $z^2 \bmod N$ generator. They further ask: how many bits can be output per multiplication, maintaining cryptographic security? In this paper we state a simple condition, the XOR-Condition and show that any generator satisfying this condition can output $\log n$ bits on each multiplication. We show that the XOR-Condition is satisfied by the \log least significant bits of the $z^2 \bmod N$ generator. The security of the $z^2 \bmod N$ generator was based on Quadratic Residu-ity [3]. This generator is an example of a Trapdoor Generator [13], and its trapdoor properties have been used in protocol design. We strengthen the security of this generator by proving it as hard as factoring.

This publication argues that Latin America and the Caribbean are in a position to move towards a "big push for sustainability" through a combination of economic, industrial, social and environmental policies capable of driving an equal and sustainable recovery and relaunching development in the region. Comprised of five chapters, the publication studies the three crises (slow growth, growing inequality and the

environmental emergency) affecting economies and societies around the world, placing particular focus on those of Latin America and the Caribbean. It goes on to present a framework for analysing these crises in an integrated manner and measuring their magnitude in the specified regions. It then examines the quantitative impacts on growth, emissions, income distribution and the external sector under different policy scenarios, highlighting the potential of various policy combinations to forge a more dynamic growth path, with lower emissions and greater equality. Further identifying seven sectors that
