A Resource for Practical Education and Occupational Training

Selected Materials, 1988-1994

Complementing Book 1 of the same title, this text takes the student up to the City and Guilds full Craft Certificate level. All aspects of the course are dealt with, along with the associated scientific background, mathematical calculations and drawings required. Although prior knowledge of the subject as provided in Book 1 is assumed, important principles are repeated so that this book can be read independently of the companion volume. Extensively illustrated, each chapter begins with clearly defined objectives and concludes with a series of questions and assignments. The text will prove

invaluable as a general workbook for those following advanced woodworking courses, including CITB business and self-employed carpenters, joiner and builders. It is useful supplementary reading for those taking courses in brickwork and cabinetmaking, for trainee woodworking machinists and construction technicians as well as for students of City and Guilds Foundation courses.

Put the Past to Work in Your Shop First printed in 1889, this book was written to educate college students in the craft and business of woodworking. Here, the original text is reprinted in its entirety, not only to help you discover late 19th-century practices in woodworking, but to help you make the most of traditional hand tools in the modern shop. As you work through a series of 39 exercises, you'll discover how to: • Set up your shop and identify the tools every well-stocked hand-tool shop needs • Effectively wield the most-used woodworking hand tools • Use the various marketing gauges like a professional cabinetmaker • Sharpen your tools - from plane blades to saw teeth • Mark and cut the most-used joints in furniture making • Use a frame saw (the quiet answer to the modern band saw) • Make a door and drawer • Install cabinet hardware including hinges and locks • And more Plus, there are chapters on home building and repair of wooden fixtures, basic boat building, wood and traditional woodworking trades and more.

Architectural Woodwork Details for Construction Stephen P. Major If you're spending too much time chasing down information on architectural woodwork and its many synthetic counterparts--and still not finding all the answers you need to do the job--you can stop looking now. Architectural Woodwork: Details for Construction is the one-stop resource you've been looking for. Written by a builder

for builders, architects, and designers, it's the first book exclusively devoted to the selection, design, detailing, and installation of both interior and exterior architectural woodwork. What's more, it also covers synthetic wood substitutes such as aluminum millwork, vinyl siding, and styrene reproduction moldings, and analyzes how each of these compares to traditional wood products.

Whether you're designing windows or walls, doors or decks, floors or fireplace trim, you'll find everything you need here to translate your design ideas into real woodwork. Just flip to the chapter on the type of woodwork you want and you'll find: • an explanation of the woodwork's practical function • characteristics of construction materials, and why some are better for the job • an

illustrated listing of choices available to you • commonly encountered problems • design considerations • and construction details. Convenient pro-and-con charts make the advantages and disadvantages of materials and styles easy to compare. Whatever your priority--durability, cost, safety, aesthetics--you'll find choices that work for you. In no time at all, you'll learn how to master every

phase of a project with the aid of clearly labeled, detailed cross-section construction drawings. And you'll get expert help on the special problems posed by curves and exterior protection. Armed with the practical why and how-to information in this book, you'll know what to look for, what questions to ask, and where not to cut corners on cost. Most important, all this information is in

one place, in a format that's uncluttered and easy to read. Don't get sidetracked by time-consuming research when you've got the real work ahead of you. Get Architectural Woodwork.
