This book explores evidence-based practice in college science teaching. It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman’s (2014) challenge seriously, and to investigate claims about the efficacy of alternative strategies in college science teaching. In editing this book, we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence, and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines. Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence. Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges, 4-year liberal arts institutions, comprehensive regional campuses, and flagship research universities. In keeping with Wieman’s challenge, our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences. The content is structured as follows: after an Introduction based on Constructivist Learning Theory (Section I), the practices we explore are Eliciting Ideas and Encouraging Reflection (Section II); Using Clickers to Engage Students (Section III); Supporting Peer Interaction through Small Group Activities (Section IV); Restructuring Curriculum and Instruction (Section V); Rethinking the Physical Environment (Section VI); Enhancing Understanding with Technology (Section VII), and Assessing Understanding (Section VIII). The book’s final section (IX) is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses. The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events. Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years. In this view, learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base. For most students, that knowledge base is riddled with a host of naive notions, misconceptions and alternative conceptions they have acquired throughout their lives. To a considerable extent, the job of the teacher is to coax out these ideas; to help students understand how their ideas differ from the scientifically accepted view; to assist as students restructure and reconcile their newly acquired knowledge; and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances. Clearly, this prescription demands far more than most college and university scientists have been prepared for.

**Over and over, studies have concluded that the doctoral experience is a monumental challenge in higher education, particularly for women. This book, Women Scholars: Navigating the Doctoral Journey, provides an enlightening ethnographic look at women and their doctoral developmental experiences. The book's aim is to empower women to be able to contextualize their experience while also offering support and inspiring readers to consider alternative ways to successfully approach the doctoral process. Women anticipating and entering the life of academia will benefit from the voices and experiences shared by the women scholars in this book. The essay writers in this volume offer an examination of critical incidents in their doctoral experiences and offer strategies they have found helpful in managing those incidents. The book also addresses challenges presented by the transition from doctoral study to post-doc employment. The volume presents 46 essays from 40 women representing a range of ages, ethnicities, academic disciplines, sexual orientations, family circumstances, and family educational histories. Their stories are told in five stages: Stage 1: Preadmission to Enrollment Stage 2: First Year of Program Stage 3: Second Year Through Candidacy Stage 4: The Dissertation Stage Stage 5: Completion and Transition to Employment These are stories of empowerment, of pitfalls and barriers overcome, of successful negotiations of the graduate school process, of the joys and challenges of scholarly pursuits, of positive help-seeking behaviors and strategies, and of life after the dissertation is completed. Potential applicants for doctoral studies will walk away with a sense that graduate education is possible and that one can be successful. Higher educators in doctoral programs, as well, will acquire a deeper understanding and appreciation for the idiosyncratic challenges facing their female students and, one hopes, develop policies and/or strategies and behaviors that empower and encourage these students' completion of their doctoral studies.**

**This book is a review and high-yield reference on the clinical molecular diagnostics of malignant neoplasms. It aims to address the practical questions frequently encountered in the molecular oncology practice, as well as key points and pitfalls in the clinical interpretation of molecular tests in guiding precision cancer management.
