This book studies the limits imposed by the depletion of fossil fuels and the requirements of climate stabilization on economic growth with a focus on China. The book intends to examine the potentials of various energy resources, including oil, natural gas, coal, nuclear, wind, solar, and other renewables, as well as energy efficiency. Unlike many other

books on the subject, this book intends to argue that, despite the large potentials of renewable energies and energy efficiency, economic growth eventually will have to be brought to an end as China and the world undertake the transition from fossil fuels to renewable energies. China has overtaken the US to become the world's largest energy consumer and greenhouse gas emitter. Their energy consumption is dominated by coal and China now accounts for one quarter of the world's total carbon dioxide emissions. Moreover, China is set to become the world's largest oil importer in the next decade. This book will consider energy development in the broader context of economic and social changes, especially the historical dynamics of the capitalist world system. Historical lessons of capitalism and socialism will be

discussed. The book will evaluate the implications of ecological limits to growth on the economic system and argue that the existing capitalist system is fundamentally incompatible with ecological sustainability.

1945. Yet hindsight, propaganda, and the imperative of the defeat of Hitler and Imperial Japan, have led to a tendency to oversimplify the image of Churchill the war leader, and 'his' Army. For whilst Churchill was undeniably a towering statesman, his relations with both the Army and War Office were ambiguous and altered considerably not only with the progress of the Second World War, but over decades. In this comprehensive book, Stephen Bull examines every aspect of the British Army during the Second World War, and considers in detail the strengths and weaknesses of an organisation that was tested to its limits on many fronts but made an immense contribution to the successful Allied outcome. The book explores the structure of military power from the men who ran it, the Generals to the detail of the regiments they

commanded. It looks at the uniforms the soldiers wore and the badges and insignia they bore on their uniforms. The weaponry Churchill's army used is discussed in detail, from small arms including rifles, bayonets, grenades, carbines and machine guns to the massed firepower of the artillery along with the increasing sophistication of tanks and other military vehicles during the period. Finally the role of auxiliary and special forces and their contribution to the campaign is considered. The comprehensive text is enhanced by more than 200 contemporary photographs.
