R and Data Mining introduces researchers, post-graduate students, and analysts to data mining using R, a free software environment for statistical computing and graphics. The book provides practical methods for using R in applications from academia to industry to extract knowledge from vast amounts of data. Readers will find this book a valuable guide to the use of R in tasks such as classification and prediction, clustering, outlier detection, association rules, sequence analysis, text mining, social network analysis, sentiment

analysis, and more. Data mining techniques are growing in popularity in a broad range of areas, from banking to insurance, retail, telecom, medicine, research, and government. This book focuses on the modeling phase of the data mining process, also addressing data exploration and model evaluation. With three in-depth case studies, a quick reference guide, bibliography, and links to a wealth of online resources, R and Data Mining is a valuable, practical guide to a powerful method of analysis. Presents an introduction into using R for data mining applications, covering most popular data mining techniques Provides code examples and data so that readers can easily learn the techniques Features case studies in real-world applications to help readers apply the techniques in their work It is thirty years since the technique of high-yield preparation of isolated hepatocytes, by collagenase perfusion of the liver, was published. The original method described by Berry and Friend has undergone many minor modifications by other workers, and the two-step procedure introduced by Seglen in 1976 has become the most frequent way to prepare hepatocyte suspensions. An important development introduced by Bissell in 1973 was the use of the cells as the first step in monolayer culture. The availability of the isolated hepatocyte preparation as cells in suspension or culture has undoubtedly facilitated research on the liver. This was emphasised in our book, published (with Dr. Greg Barritt) in 1990, which described in detail methods of preparation and the properties of the isolated hepatocytes. It also discussed the usefulness of the preparation for the study of intermediary and xenobiotic metabolism, calcium ion transport, and the growth and differentiation of hepatocytes in culture. The book also touched briefly on a range of specialised techniques, including peri fusion, subcellular fractionation, transplantation,

cryopreservation and measurement of intracellular pH. Although standard procedures for the manipulation of hepatocytes have not changed a great deal in ten years, they have undoubtedly been refined. This applies particularly to hepatocyte culture techniques, cryopreservation, and even to preparation of hepatocyte suspensions, where it is now feasible to use purified enzymes. There is also much more emphasis on the use and study of human hepatocytes, particularly in the field of pharmacology and therapeutics.

This important catalogue presents the collection in its entirety, before the looting and destruction of war. It is an invaluable tool in the fight against illicit trafficking and the preservation of Afghanistan's cultural heritage. Situated at the crossroads of the world's oldest trade routes and populated by a mosaic of cultures, Afghanistan has been the theatre of repeated conflicts over its long and complex history. In the midst of the warfare and civil unrest that ravaged this ancient land during the last two decades of the twentieth century, hundreds of precious artefacts were plundered from the collections of the National Museum of Afghanistan in Kabul, which was founded in the early 1930s. The destruction of these irreplaceable treasures like the much-publicized Bamiyan Buddhas that were brutally destroyed in 2001 represents a tremendous loss not only for the people of Afghanistan but for all of humanity. With the aim of keeping alive the memory of the museum's scattered collections, specialist Francine Tissot has compiled a systematic listing of the holdings as they were conserved, in their intact state, in the museum's showcases and reserve collections until 1985. This comprehensive catalogue, is illustrated with over 1,600 photographs and drawings. A cumulative list of works represented by Library of Congress printed cards. The Rosetta Stone and Decipherment

A comprehensive history of the indigenous people of Sudan based on interviews and local genealogies, first published in 1922.

Chart Number One is essential to correct and accurate use of nautical charts. More than a chart, it is a book that defines the symbols, abbreviations and terms used on charts. It also provides important information about buoys, light visibility (range) and aids to navigation. This new and improved edition from Paradise Cay is a complete and accurate high quality reproduction of information provided by NOAA and NIMA.

This book presents a catalogue and discussion of the Late Bronze Age Minoan-Mycenaean agricultural, wood-working, met-allurgical and general purpose tools found in Europe. It primarily discusses the affect sites and finds made on the mainland of Greece; in an attempt to investigate into the nature and extent of contact between Europe and Greece during this era.

Authors and subjects

Completely revised and updated edition. The book covers the entire field of satellite geodesy (status spring/\break summer 2002). Basic chapters on reference systems, time, signal propagation, and satellite orbits are updated. All currently important observation methods are included and also all newly launched satellites of interest to geodesy. Particular emphasis is

given to the current status of the Global Positioning System (GPS), which covers now about one third of the book. A new chapter on Differential GPS and active GPS reference networks is included. The GPS modernization plans, GLONASS, the forthcoming European system GALILEO, modern developments in GPS data analysis, error modelling, precise real time methods and ambiguity resolution are dealt with in detail. New satellite laser ranging missions, new altimetry missions (e.g. TOPEX/Poseidon, ERS-1/2, GFO, JASON), and new and forthcoming gravity field missions (CHAMP, GRACE, GOCE) are also considered. The book serves as a textbook for advanced undergraduate and graduate students, as well as a reference for professionals and scientists in the field of engineering and geosciences such as geodesy, surveying, geo-information, navigation, geophysics and oceanography.
