Drawing on indigenous and scientific knowledge of medicinal plants, *Traditional Herbal Therapy for the Human Immune System* presents the protective and therapeutic potential of plant-based drinks, supplements, nutraceuticals, synergy food, superfoods, and other products. Medicinal plants and their products can affect the immune system and act as immunomodulators. Medicinal plants are popularly used in folk medicine to accelerate the human immune defence and improve body reactions against infectious or exogenous injuries, as well as to suppress the abnormal immune response occurring in immune disorders. This book explains how medicinal plants can act as a source of vitamins and improve body functions such as enhanced oxygen circulation, maintained blood pressure and improved mood. It also outlines how specific properties of certain plants can help boost the immune system of humans with cancer, HIV, and COVID-19. Key features: Provides specific information on how to accelerate and or fortify the human immune system by using medicinal plants. Presents scientific understanding of herbs, shrubs, climbers and trees and their potential uses in conventional and herbal medicine systems. Discusses the specific role of herbal plants that act as antiviral and antibacterial agents and offer boosted immunity for cancer, H1N1 virus, relieving swine flu, HIV and COVID-19 patients. Part of the *Exploring Medicinal Plants* series, this book is useful for researchers and students, as well as policy makers and people working in

In *Unani Medicine in the Making*, Kira Schmidt Stiedenroth examines the contemporary institutions and practices of Graeco-Islamic healing in India. Drawing on interviews with practitioners, clinical observations, and Urdu sources, the book focuses on Unani's multiplicity, scrutinizing apparent tensions between the understanding of Unani as a system of medicine and its multiple enactments as Islamic medicine, medical science, or alternative medicine. Ethnographic details provide vivid descriptions of the current practices of Unani in India and invite readers to rethink the idea that

Integration of complementary and alternative medicine therapies (CAM) with conventional medicine is occurring in hospitals and physicians offices, health maintenance organizations (HMOs) are covering CAM therapies, insurance coverage for CAM is increasing, and integrative medicine centers and clinics are being established, many with close ties to medical schools and teaching hospitals. In determining what care to provide, the goal should be comprehensive care that uses the best scientific evidence available regarding benefits and harm, encourages a focus on healing, recognizes the importance of compassion and caring, emphasizes the centrality of relationship-based care, encourages patients to share in decision making about therapeutic options,

and promotes choices in care that can include complementary therapies where appropriate. Numerous approaches to delivering integrative medicine have evolved. Complementary and Alternative Medicine in the United States identifies an urgent need for health systems research that focuses on identifying the elements of these models, the outcomes of care delivered in these models, and whether these models are cost-effective when compared to conventional practice settings. It outlines areas of research in convention and CAM therapies, ways of integrating these therapies, development of curriculum that provides further education to health professionals, and an amendment of the Dietary Supplement Health and Education Act to improve quality, accurate labeling, research into use of supplements, incentives for privately funded research into their efficacy, and consumer protection against all potential hazards.

This book is the 8th volume of the popular series 'Medicinal and Aromatic Plants of the World'. Like the previous volumes, this volume is being introduced in a monographic format containing an extremely rich and diverse medicinal flora of India. Both well-known and somewhat still ignored species have been described in view of their traditional, present day and prospective uses. The scientific and technological achievements are also included aptly in this volume, together with a careful and critical consideration to

our contemporary knowledge of this vast interdisciplinary domain with an Indian focus. In the era of global climate change and pandemics, building on the huge Indian traditions, this volume will make an important contribution to the better knowledge and understanding of MAPs. The Indian flora has always been recognized for its medicinal and aromatic plant values and this volume is explicitly focusing in that direction. With the rapidly expanding scope of natural nutraceuticals and herbal formulations, this book will be a fruitful acquisition for the interested readers globally.

facets of what many consider to be a wonder plant—from its cultivation to its potential for medicinal purposes. Divided into four parts, the book begins by examining cultural practices and their implications for date quality. The contributors discuss tissue culture studies, farm water management, mechanization approaches in pollination and harvesting operations, and marketing aspects. The second section focuses on postharvest operations such as drying and explores alternatives for methyl bromide fumigation and value-added products. It also reviews biofuel production from by-products and discusses the issue of waste generated from industry. The third part of the book highlights the physical, chemical, and structural characteristics of dates. It reviews fermentative products that use dates as substrate, discusses the fruits as a substitute for added sugar in food, and explores date palm feeding to livestock. The final section discusses the possibilities for nutritional and medicinal use and reviews the use of dates in indigenous medicine. Exploring essential properties and agricultural implications, this volume is a reliable resource for understanding the many aspects of the *Phoenix dactylifera* Linn.

This book unpacks the organized sets of practices that govern contemporary Asian medicine, from production of medications in the lab to their circulation within circuits and networks of all kinds, and examines the plurality of actors involved in such governance. Chapters analyze the process of industrialization and commercialization of Asian medicine and the ways in which the expansion of the market in Asian medicines has contributed to the inscription of products within a large system of governance, greatly dominated by global actors and the biomedical hegemony. At the same time, the contributors argue that local actors continue to play a major role in reshaping the regulations and their implementation, thus complexifying the trajectory of the remedies and their

natures. Examining in particular the plurality of actors involved in governance and circulation, and the converging or conflicting logics actors follow in regard to negotiations and tensions that arise, the book brings a unique multi-layered contribution to the study of governance and circulation of Asian medicines, offering further proof of their fluidity and resilience. Filling a significant gap in the market by addressing circulation and governance of Asian medicines in Asian countries, including Bangladesh, Myanmar, and Singapore, this book will be of interest to students and scholars in the field of Asian studies, Asian culture and society, global health, Asian medicine, and medical anthropology.

***This book describes the processes that are involved in the development of new drugs. The authors discuss the history, role of natural products and concept of receptor interactions with regard to the initial stages of drug discovery. In a single, highly readable volume, it outlines the basics of pharmacological screening, drug target identification, and genetics involved in early drug discovery. The final chapters introduce readers to stem therapeutics, pharmacokinetics, pharmacovigilance, and toxicological testing. Given its scope, the book will enable research scholars, professionals and young scientists to understand the key fundamentals of drug discovery, including stereochemistry, pharmacokinetics, clinical trials, statistics and toxicology.***

*Across the world, developing countries are attempting to balance the international standards of intellectual property concerning pharmaceutical patents against the urgent need for accessible and affordable medicines. In this timely and necessary book, Monirul Azam examines the attempts of several developing countries to walk this fine line. He evaluates the experiences of Brazil, China, India, and South Africa for lessons to guide Bangladesh and developing nations everywhere. Azam's legal expertise, concern for public welfare, and compelling grasp of principal case studies make Intellectual Property and Public Health in the Developing World a definitive work. The developing world is striving to meet the requirements of the World Trade Organization's TRIPS Agreement on intellectual property. This book sets out with lucidity and insight the background of the TRIPS Agreement and its implications for pharmaceutical patents, the consequences for developing countries, and the efforts of certain representative nations to comply with international stipulations while still maintaining local industry and public health. Azam then brings the weight of this research to bear on the particular case of Bangladesh, offering a number of specific policy recommendations for the Bangladeshi government—and for governments the world over. Intellectual Property and Public Health in the Developing World is a must-read for public policy-makers, academics and students, non-governmental organizations, and readers everywhere who are interested in making sure that developing nations meet the health care needs of their people.*

information on all aspects of the extraction of biological actives from plants and the development of dietary supplements and fortified food using herbal extracts. The book begins with a brief survey of the use of herbs in different civilizations and traces the evolution of herbal medicine, including the emergence of nutraceuticals from the discipline of ethnopharmacology and the Alma Ata Declaration of 1978. It moves on to describe various aspects of the extraction process, including selection of plant species, quality control of raw materials, the comminution of herbs, and the selection of solvents. It also describes the optimization of extraction in relation to response surface methodology before describing uses of herbal extracts in food supplements and fortified foods. With special attention paid to stability analysis and the masking of tastes, the book gives an overview of the formulation of various types of tablets, capsules, and syrups using herbal extracts. It also describes the benefits of foods fortified with herbal extracts such as soups, yogurt, sauces, mayonnaise, pickles, chutneys, jams, jellies, marmalades, cheese, margarine, sausages, bread, and biscuits, as well as some beverages. Herbal Bioactives and Food Fortification covers the fundamental steps in herbal extraction and processing in a single volume. The identification of such dietary compounds has prompted researchers to explore the vast array of***

***their beneficial effects. However, despite their widespread use, there is still limited data on the safety and efficacy of the products currently on the market. Current research on the side effects and safe usage of herbal medicines is necessary for providing optimal care and counseling for patients. Treating Endocrine and Metabolic Disorders With Herbal Medicines is a comprehensive reference book focused on spreading awareness on the safety, potential harmful effects, and rational use of herbal medicines. The chapters within explore and provide insight on the effectiveness, versatility, and side effects of various herbal medicines across a range of different diseases and conditions. While highlighting herbal medicine in areas such as diabetes, cancer, infertility, and endocrine disorders, this publication is ideally intended for clinical practitioners, pharmaceutical scientists, doctors, practitioners, stakeholders, researchers, academicians, and students interested in enhancing their knowledge and awareness in the field of complementary medicine.***

***This groundbreaking work calls for the overhaul of traditional Ayurveda and its transformation into a progressive, evidence-based practice. This book begins by looking back at the research of the last three centuries, Indian medicinal plants, and Ayurveda in a twenty-first-century context. The first part of this book explores the limitations of contemporary Ayurvedic pharmacognosy and pharmacology, discussing the challenges the practice faces from research and clinical trials. It makes a compelling argument for the necessity of change. The second part of the book defines and elaborates upon a new, scientific path, taking the reader from identification of the herb through all stages of drug development. An essential tool for herbal drug development, this text is designed for knowledgeable students, practitioners, and scholars of Ayurveda, pharmacy, and herbal medicine.***
