Countdown to Global Catastrophe

Loose Leaf for Natural Disasters

Thriving on Our Changing Planet

Forthcoming Books

Natural Hazards, People's Vulnerability and Disasters

Health Informatics (HI) focuses on the application of Information Technology (IT) to the field of medicine to improve individual and population healthcare delivery, education and research. This extensively updated fifth edition reflects the current knowledge in Health Informatics and provides learning objectives, key points, case studies and references.

Natural Disasters

A fictionalized account based on the mysterious 1949 disappearance of actress Jean Spangler, whose demise had been linked to the Black Dahlia killings, is a darkly sensual tale that imagines what may have been her fate. By the Edgar Award-shortlisted author of *Die a Little*. Reprint. 15,000 first printing.

The first book to focus exclusively on the subject, *Geodiversity, Second Edition* describes the interrelationships between geodiversity and biodiversity, the value of geodiversity to society, as well as current threats to its existence. Illustrated with global case studies throughout, the book examines traditional approaches to protecting geodiversity and the new management agenda now being implemented. The Second Edition of this successful textbook continues to build on the success of the first edition which is still the standard reference for the subject. Fully revised and updated throughout, the Second Edition now includes new material on geoparks, geotourism and implications of climate change for geoconservation. Reviews of previous edition: "Murray Gray's new book is the first widely available text to bring together and analyse some of these emerging ideas....The result is a book that should be in the library of every land manager and one that is likely to lead many practicing geoscientists and quaternarists to a new view of the importance of their field for nature conservation and environmental management.." —*Journal of Quaternary Science*, Vol.19, No.8, December 2004 "It is strange that it is necessary to justify the importance of geodiversity.... Murray Gray does it with brilliance, not only to convince 'non-believers', but giving inspiration to us that have worked in geoconservation for a long time." —*ProGEO News*, 3 & 4, 2003 "...The author provides a timely review of recent advances in the integration of geodiversity into wider conservation and planning strategies..." —*Journal of Quaternary Science*, Vol.19, No.8, December 2004 "...the book is well-written and follows a clear and concise outline." —*Environmental Geology*, Vol. 48, No. 2, July 2005

Carbon Dioxide Capture and Storage

Planning and Design

IPCC Report on sources, capture, transport, and storage of CO2, for researchers, policy-makers and engineers.

Many books have been written about the press and terrorism - particularly since September 11th - but this is the first press-focused exploration of their relationship. Drawing upon the history of terrorism, mass communication research, media theory, and journalism practice, this book examines how the press reports terrorism, and how that reporting varies depending on the medium and location. Examining the differences in reporting - globally and historically within different media and government systems - <Terrorism and the Press provides insights for how, in the future, we can better navigate the relationship between the press, government, and audience when terrorists attack.

Disasters by Design provides an alternative and sustainable way to view, study, and manage hazards in the United States that would result in disaster-resilient communities, higher environmental quality, inter- and intragenerational equity, economic sustainability, and improved quality of life. This volume provides an overview of what is known about natural hazards, disasters, recovery, and mitigation, how research findings have been translated into policies and programs; and a sustainable hazard mitigation research agenda. Also provided is an examination of past disaster losses and hazards management over the past 20 years, including factors--demographic, climate, social--that influence loss. This volume summarizes and sets the stage for the more detailed books in the series.

Natural Disasters, 7th edition, focuses on how the normal processes of the Earth concentrate their energies and deal heavy blows to humans and their structures. It is concerned with how the natural world operates and, in so doing, kills and maims humans and destroys their works. Throughout the book, certain themes are maintained.

A Novel

The Plague Year

The 2030 Spike

Religious Responses to Natural Disasters in the Middle Ages

Seventh Edition
