Graphic Design for

Architects is a handbook of techniques, explanations and examples of graphic design most relevant to architects. The book covers a variety of scales of graphic design, everything from portfolio design and competition boards, to signage and building super-graphics - to address every phase of

architectural production. This book combines and expands on information typically found in graphic design, information design, and architectural graphics books. As architectural communication increases to include more territory and components of a project, it is important for designers to be knowledgeable about the various ways in which to communicate visually. For instance, signage should be designed as part of the process - not something added at the end of a project; and the portfolio is a manifestation of how the designer works, not just an application to sell a

design sensibility. In thinking about architecture as a systematic and visual project, the graphic design techniques outlined in this book will help architects process, organize and structure their work through the lens of visual communication. Each chapter is titled and organized by common architectural modes of communication and production. The chapters speak to architects by directly addressing projects and topics relevant to their work, while the information inside each chapter presents graphic design methods to achieve the architects' work. In this way, readers

don't have to search through graphic design books to figure out what's relevant to them - this book provides a complete reference of graphic techniques and methods most useful to architects in getting their work done.

A cross-disciplinary approach is offered to consider the challenge of emerging technologies

designed to enhance human bodies and minds. Perspectives from philosophy, ethics, law, and policy are applied to a wide variety of enhancements, including integration of technology within human bodies, as well as genetic, biological, and pharmacological modifications. Humans may be permanently or temporarily enhanced with artificial parts by manipulating (or reprogramming) human DNA and through other

enhancement techniques (and combinations thereof). We are on the cusp of significantly modifying (and perhaps improving) the human ecosystem. This evolution necessitates a continuing effort to re-evaluate current laws and, if appropriate, to modify such laws or develop new laws that address enhancement technology. A legal, ethical, and policy response to current and future human enhancements should strive to protect the

rights of all involved and to recognize the responsibilities of humans to other conscious and living beings, regardless of what they look like or what abilities they have (or lack). A potential ethical approach is outlined in which rights and responsibilities should be respected even if enhanced humans are perceived by non-enhanced (or less-enhanced) humans as “no longer human” at all.
The Joint Meteorological

and Oceanographic (METOC) Handbook (JMH) serves as a primary reference for the new Joint METOC Officer Course (JMOC). The intention of the JMH is to provide the Joint METOC Officer (JMO), associated METOC staff, and Service and functional component METOC personnel, an easy-to-use reference manual to assist in the planning and execution of METOC support for joint operations. Some information previously included is better found

through on-line sources which are more easily updated, and a web-based resources listing is included as an appendix. The JMH describes existing Joint METOC structure, how METOC personnel and organizations are integrated into the combatant command and JTF structures, and what METOC resources are available. Separate chapters cover METOC capabilities and support to operational forces within Service

organizational structures. It is important to understand the joint operational planning process and how the METOC officer fits into that process. The duties and responsibilities of the Senior METOC Officer (SMO) and JMO and their interaction during a joint operation are important concepts. The coordination between the JMO and his Service and functional component METOC units is vital to the success of joint METOC operations. The

concept of one theater, one forecast, highlighted in Joint Publication 3-59, is the cornerstone of METOC support to a joint operation. Joint METOC personnel should understand the capabilities of Service level METOC equipment and tactical and fixed communication systems for interoperability. The sources of METOC data and available products and services from various METOC production sites and theater level operational commands

are useful for any military operation.

"White's Barack Obama's America eloquently captures both the important nuances of the current political scene and its long-term consequences." ---Richard Wirthlin, former pollster for Ronald Reagan "This delightfully written and accessible book is the best available account of the changes in culture, society, and politics that have given us Barack Obama's America."

---Stan Greenberg,

pollster for Bill Clinton and Chairman and CEO of Greenberg Quinlan Rosner Research "From one of the nation's foremost experts on how values shape our politics, a clear and compelling account of the dramatic shifts in social attitudes that are transforming American political culture. White's masterful blend of narrative and data illuminates the arc of electoral history from Reagan to Obama, making a powerful case for why we are entering a

new progressive political era." ---Matthew R. Kerbel, Professor of Political Science, Villanova University, and author of Netroots "John Kenneth White is bold. He asks the big questions . . . Who are we? What do we claim to believe? How do we actually live? What are our politics? John Kenneth White writes compellingly about religion and the role it played in making Barack Obama president. White's keen insight into America's many faiths

clarifies why Barack Obama succeeded against all odds. It is a fascinating description of religion and politics in twenty-first-century America---a must-read." ---Kathleen Kennedy Townsend, former Lieutenant Governor of Maryland and author of Failing America's Faithful "In Barack Obama's America, John Kenneth White has written the political equivalent of Baedeker or Michelin, the definitive guide to and through the new,

uncharted political landscape of our world. White captures and explains what America means---and what it means to be an American---in the twenty-first century." ---Mark Shields, nationally syndicated columnist and political commentator for PBS NewsHour "John White has always caught important trends in American politics that others missed. With his shrewd analysis of why Barack Obama won, he's done it again." ---E. J.

Dionne, Jr., Senior Fellow, Brookings Institution, and University Professor in the Foundations of Democracy and Culture at Georgetown University
The election of Barack Obama to the presidency marks a conclusive end to the Reagan era, writes John Kenneth White in Barack Obama's America. Reagan symbolized a 1950s and 1960s America, largely white and suburban, with married couples and kids at home, who attended church more often than

not. Obama's election marks a new era, the author writes. Whites will be a minority by 2042. Marriage is at an all-time low. Cohabitation has increased from a half-million couples in 1960 to more than 5 million in 2000 to even more this year. Gay marriages and civil unions are redefining what it means to be a family. And organized religions are suffering, even as Americans continue to think of themselves as a religious people. Obama's

inauguration was a defining moment in the political destiny of this country, based largely on demographic shifts, as described in Barack Obama's America. The diminishment of Arctic sea ice has led to increased human activities in the Arctic, and has heightened interest in, and concerns about, the region's future. The United States, by virtue of Alaska, is an Arctic country and has substantial interests in the region. On January 21, 2015, President Obama issued an executive order for enhancing coordination of national efforts in the Arctic. The United States assumed the chairmanship of the Arctic Council on April 24, 2015, and will serve in that capacity for two years. Record low extents of Arctic sea ice over the past decade

have focused scientific and policy attention on links to global climate change and projected ice-free seasons in the Arctic within decades. These changes have potential consequences for weather in the United States, access to mineral and biological resources in the Arctic, the economies and cultures of peoples in the region, and national security. The five Arctic coastal states-the United States, Canada, Russia, Norway, and Denmark (of which Greenland is a territory)-have made or are in the process of preparing submissions to the Commission on the Limits of the Continental Shelf regarding the outer limits of their

extended continental shelves. The Russian submission includes the underwater Lomonosov Ridge, a feature that spans a considerable distance across the Arctic Ocean. The diminishment of Arctic ice could lead in coming years to increased commercial shipping on two trans-Arctic sea routes-the Northern Sea Route and the Northwest Passage. Current international guidelines for ships operating in Arctic waters are being updated. Changes to the Arctic brought about by warming temperatures will likely allow more exploration for oil, gas, and minerals. Warming that causes permafrost to melt could pose

challenges to onshore exploration activities. Increased oil and gas exploration and tourism (cruise ships) in the Arctic increase the risk of pollution in the region. Cleaning up oil spills in ice-covered waters will be more difficult than in other areas, primarily because effective strategies have yet to be developed. Large commercial fisheries exist in the Arctic. The United States is currently meeting with other countries regarding the management of Arctic fish stocks. Changes in the Arctic could affect threatened and endangered species. Under the Endangered Species Act, the polar bear was listed as threatened on May 15, 2008. Arctic

climate change is also expected to affect the economies, health, and cultures of Arctic indigenous peoples. Two of the Coast Guard's three polar icebreakers-Polar Star and Polar Sea-have exceeded their intended 30-year service lives, and Polar Sea is not operational. On May 12, 2011, representatives from the member states of the Arctic Council signed an agreement on cooperation on search and rescue in the Arctic. Although there is significant international cooperation on Arctic issues, the Arctic is increasingly being viewed by some observers as a potential emerging security issue. Some of the Arctic coastal states,
