Some of today’s educational experts were asked to envision the year 2020, when technology has assumed a major role in elementary and secondary education. The informed conjecture that followed is contained in this volume; contributors offer visions of the future as well as specific steps that could turn those visions into realities. Innovative ideas for research, development, hardware, software, teacher training, technical assistance, organizational and cultural change are offered as a means to illuminate the potential role of technology in the educational systems of tomorrow. Technology in Education is a thought-provoking statement of what can and should be done to advance the application of technology to education over the next few decades. As such, it should be read by all researchers and professionals in educational technology.

Introduction to Wireless and Mobile Systems

The past 50 years have witnessed a revolution in computing and related communications technologies. The contributions of industry and university researchers to this revolution are manifest; less widely recognized is the major role the federal government played in launching the computing revolution and sustaining its momentum. Funding a Revolution examines the history of computing since World War II to elucidate the federal government's role in funding computing research, supporting the education of computer scientists and engineers, and equipping university research labs. It reviews the economic rationale for government support of research, characterizes federal support for computing research, and summarizes key historical advances in which government-sponsored research played an important role. Funding a Revolution contains a series of case studies in relational databases, the Internet, theoretical computer science, artificial intelligence, and virtual reality that demonstrate the complex interactions among government, universities, and industry that have driven the field. It offers a series of lessons that identify factors contributing to the success of the nation's computing enterprise and the government's role within it.

Identifying 'permissive populism', the trickle down of permissiveness into mass consumption, as a key feature of the 1970s, Leon Hunt considers the values of an ostensibly 'bad' decade and analyses the implications of the 1970s for issues of taste and cultural capital. Hunt explores how the British cultural landscape of the 1970s coincided with moral panics, the troubled Heath government, the three day week and the fragmentation of British society by nationalism, class conflict, race, gender and sexuality.

*This is the first volume exclusively dedicated to planning education, with a focus on India and learning from global experiences for India. Prior to the 1990s, planning education in India was largely confined to national and local economic concerns. Within a globalized scenario, such pedagogies and theories have become outmoded. With new concerns emerging in planning, new pedagogical tools and theorizations need to be developed within planning curricula to provide today's planners with the wherewithal to adapt to changing and globalizing cities and regions in India. Therefore, the eminent contributors to this volume deal exclusively and comprehensively with planning education in a globalized context. Divided into four thematic sections, this volume provides a comprehensive view of planning education in India, with focus on:
• The trajectory of planning education in India.
• The kinds of knowledge used for teaching in Indian planning schools, and whether some sort of integration of diverse knowledges is achieved.
• The ethical foundations of urban and regional planning in Indian planning schools.
• The role of international planning perspectives in providing new insights for Indian planning education. Comprehensive and topical, this volume is of interest to academics and researchers from planning institutes, urban and regional planners and policy makers, as well as architects, social geographers and economists.*

I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). This volume contains ten papers, by many prominent authors, examining antitrust issues of current interest. The first paper summarizes the other papers and presents original research on the meaning of consumer welfare and the sources of buyer power. The next five articles evaluate older antitrust cases to determine whether the decisions reached, the relief ordered, or both, enhanced consumer welfare. The seventh paper describes a new measure of efficiency that gives greater weight to consumer harm and applies it to a recent merger. The next paper explains a new way in which vertical foreclosure can enhance the market power of an upstream supplier. The ninth article refines an innovative technique for identifying substitutes among a set of differentiated products. The tenth paper confronts a contentious policy issue - the treatment of patent settlements in which the patent holder pays the challenger to exit the market - and concludes that they should be per se illegal.
