This book weighs alternative conceptions of the equal opportunity principle through empirical and ethical explorations of the Federal law directing local school districts to award special educational opportunities to students classified as learning disabled. The authors examine the vexing question of how we should distribute extra education funds.

Based on the author's popular workshop, this concise volume provides scientific and practical guidance on assessing learning disabilities and ADHD in adults. It includes instructions for accessing the author's downloadable PowerPoints, as well as a Continuing Education component (3 credits) that is administered by the American Academy of Clinical Neuropsychology. Topics include definitions of disability (including legal definitions), assessment, and management approaches (from medications and therapy to educational and workplace accommodations), and assistive technology and software. Three case examples are provided, along with a sample report. The book is aimed at clinical neuropsychologists and clinical psychologists who are involved in the assessment and management of adults with learning disabilities and/or ADHD.

The Handbook of Police Psychology features contributions from over 30

leading experts on the core matters of police psychology. The collection surveys everything from the beginnings of police psychology and early influences on the profession; to pre-employment screening, assessment, and evaluation; to clinical interventions. Alongside original chapters first published in 2011, this edition features new content on deadly force encounters, officer resilience training, and police leadership enhancement. Influential figures in the field of police psychology are discussed, including America's first full-time police psychologist, who served in the Los Angeles Police Department, and the first full-time police officer to earn a doctorate in psychology while still in uniform, who served with the New York Police Department. The Handbook of Police Psychology is an invaluable resource for police legal advisors, policy writers, and police psychologists, as well as for graduates studying police or forensic psychology.

Working memory has been one of the most intensively studied systems in cognitive psychology. It is only relatively recently however that researchers have been able to study the neural processes might underlye working memory, leading to a proliferation of research in this domain. The Cognitive Neuroscience of Working Memory brings together world class researchers from around the world to summarize our current knowledge of this field, and directions for future research. An historical opening chapter by Alan

Baddeley and Graham Hitch sets the context for the subsequent chapters. The scope of the book is exceptionally broad, providing a showcase for leading edge research on all contemporary concepts of working memory, using techniques from experimental psychology, from single cell recording, from neuropsychology, from cognitive neuroimaging and from computational modelling. The Cognitive Neuroscience of Working Memory will be an important reference text for all those seeking an authoritative and comprehensive synthesis of this field.

A research study exploring the validity of predictor measures in the selection of successful Florida police officers is summarized. The project, undertaken by the Human Resources Institute at the University of Florida at the request of the Florida Police Department, tested the validity of two types of prediction measures in selecting successful law enforcement

officers. The measures were physical, biographic, and demographic characteristics of the applicants and psychological tests including civil service exam, aptitude and intelligence tests, measures of values, interests, and attitudes, and tests of personality and motivation. These predictors were verified against actual job performance of law enforcement officers. Performance at the police academy and performance on the job during the probationary period and/or as tenured patrol officer were indicators of actual performance. The test population consisted of 317 recruit volunteers at various Florida testing centers who were categorized as 'successful' (i.e., rehirable by their department) or 'failures' (recruits who failed police academy, were discharged, or resigned). Four biodata items discriminated between successes and failures for the Caucasian males: participation in high school athletics, fewer family moves, less need for job encouragement, and higher values for achievement and societal contributions. Successful females were less likely to be single and they more often reported that they were not bothered by bragging co-workers. All four N-D scales (Nelson-Denny) significantly discriminated between successful and failing Caucasian males and females. Other important factors for male Caucasian officers were capacity for status, intellectual efficiency, sociability, dominance, and achievement via conformance scales. The preliminary

results of the Florida project provide encouraging evidence of the predictive value of demographic variables and psychological tests in police selection.

Police Psychology: New Trends in Forensic Psychological Science is a relatively new specialty that can be broadly defined as the application of psychological principles and methods to assist law enforcement. This publication aims to bring together the contributions of some of the most prolific authors in the field to bridge the gap between the knowledge base of researchers, practitioners, and policymakers regarding the interface of psychological sciences and law enforcement. Explores the contribution of psychology on the way patrol officers deal with offenders with mental illness or respond and assess the risk of vulnerable victims (e.g. domestic violence, sexual assault) Contains ethically correct investigation techniques Written by the foremost authorities on the subject from around the globe This important resource is an update of the best-selling book The Special Educator's Resource Guide to 109 Diagnostic Tests. The greatly expanded second edition contains 301 new and enhanced tests, which are vital to understanding assessment in special education. Designed as an easy-to-use, hands-on resource, the book is filled with practical tools, information, and suggestions. Step-by-step, this practical guide explores the various stages

of evaluation, interpretation, diagnosis, prescription, and remediation. A powerful new tool for all forensic accountants, or anyone who analyzes data that may have been altered Benford's Law gives the expected patterns of the digits in the numbers in tabulated data such as town and city populations or Madoff's fictitious portfolio returns. Those digits, in unaltered data, will not occur in equal proportions; there is a large bias towards the lower digits, so much so that nearly one-half of all numbers are expected to start with the digits 1 or 2. These patterns were originally discovered by physicist Frank Benford in the early 1930s, and have since been found to apply to all tabulated data. Mark J. Nigrini has been a pioneer in applying Benford's Law to auditing and forensic accounting, even before his groundbreaking 1999 Journal of Accountancy article introducing this useful tool to the accounting world. In Benford's Law, Nigrini shows the widespread applicability of Benford's Law and its practical uses to detect fraud, errors, and other anomalies. Explores primary, associated, and advanced tests, all described with data sets that include corporate payments data and election data. Includes ten fraud detection studies, including vendor fraud, payroll fraud, due diligence when purchasing a business, and tax evasion. Covers financial statement fraud, with data from Enron, AIG, and companies that were the target of hedge fund short sales. Looks at how to

detect Ponzi schemes, including data on Madoff, Waxenberg, and more Examines many other applications, from the Clinton tax returns and the charitable gifts of Lehman Brothers to tax evasion and number invention Benford's Law has 250 figures and uses 50 interesting authentic and fraudulent real-world data sets to explain both theory and practice, and concludes with an agenda and directions for future research. The companion website adds additional information and resources.

This volume provides an excellent overview of the field of discourse processes, capturing both its breadth and its depth. World-renowned researchers present the latest theoretical developments and thought-provoking empirical data. In doing so, they cover a broad range of communicative activities, including text comprehension, conversational communication, argumentation, television or media viewing, and more. A central theme across all chapters concerns the notion that coherence determines the interpretation of the communication. The various chapters illustrate the many forms that coherence can take, and explore its role in different communicative settings.

A fantastic and monumental contribution to our field. ã Ralph M. Reitan, PhD "The field of neuropsychology has many specialized books on particular diseases, but there is always a need for a general text to cover the major aspects of neuropsychology from neuroanatomy to assessment to practice issues. This is one such book that attempts to provide comprehensive coverage of the field." --Doody's In the last decade, the number of books, courses, training opportunities, and journals dealing with clinical neuropsychology has greatly increased. Demand for a complete reference in the field is growing as practitioners in private practice, the court system, and the medical field continue to make discoveries and advance our knowledge of the brain system and how it affects our everyday lives. In order to address this urgent need, Drs. Horton and Wedding have edited this Third Edition of the classic *Neuropsychology Handbook*. In its pages are reviews of all the major areas in which clinical neuropsychologists work: the foundations of clinical neuropsychology brain structure and function neurological disorders psychiatric disorders diagnostic decision-making symptom validity testing neuroimaging behavioral change following traumatic brain injury disability determination rehabilitation planning, and more Very specialized areas of practice such as clinical neuropsychology with children, clinical neurotoxicology, and neuropsychological assessment in criminal law cases also receive chapters.

The Boston Process Approach to neuropsychological assessment, advanced by Edith Kaplan, has a long and well-respected history in the field. However, its theoretical and empirical support has not previously been assembled in an easily accessible format. This volume fills that void by compiling the historical, empirical, and practical teachings of the Process Approach. The reader will find a detailed history of the precursors to this model of thought, its

development through its proponents such as Harold Goodglass, Nelson Butters, Laird Cermak, and Norman Geschwind, and its continuing legacy. The second section provides a guide to applying the Boston Process Approach to some of the field's most commonly used measures, such as the various Wechsler Intelligence Scales, the Trail Making Test, the California Verbal Learning Test, and the Boston Naming Test. Here, the reader will find a detailed history of the empirical evidence for test administration and interpretation using Boston Process Approach tenets. The final section of the book provides various perspectives on the implementation of the Boston Process Approach in various clinical and research settings and with specialized populations.

With a well-publicized trial in the foreground, this volume explores psychiatric diagnoses, the meaning of "disability," and current law regarding when psychological conditions should allow for special allowances.

The Biographical Dictionary of Iowa

Narrative Comprehension, Causality, and Coherence

Benford's Law

Iowa has been blessed with citizens of strong character who have made invaluable contributions to the state and to the nation. In the 1930s alone, such towering figures as John L. Lewis, Henry A. Wallace, and Herbert Hoover hugely influenced the nation's affairs. Iowa's Native Americans, early explorers, inventors, farmers, scholars, baseball

players, musicians, artists, writers, politicians, scientists, conservationists, preachers, educators, and activists continue to enrich our lives and inspire our imaginations. Written by an impressive team of more than 150 scholars and writers, the readable narratives include each subject's name, birth and death dates, place of birth, education, and career and contributions. Many of the names will be instantly recognizable to most Iowans; others are largely forgotten but deserve to be remembered. Beyond the distinctive lives and times captured in the individual biographies, readers of the dictionary will gain an appreciation for how the character of the state has been shaped by the character of the individuals who have inhabited it. From Dudley Warren Adams, fruit grower and Grange leader, to the Younker brothers, founders of one of Iowa's most successful department stores, *The Biographical Dictionary of Iowa* is peopled with the rewarding lives of more than four hundred notable citizens of the Hawkeye State. The histories contained in this essential reference work should be eagerly read by anyone who cares about Iowa and its citizens. Entries include Cap Anson, Bix Beiderbecke, Black Hawk, Amelia Jenks Bloomer, William Carpenter, Philip Greeley Clapp, Gardner Cowles Sr., Samuel Ryan Curtis, Jay Norwood Darling, Grenville Dodge, Julien Dubuque, August S. Duesenberg, Paul Engle, Phyllis L. Propp Fowle, George Gallup, Hamlin Garland, Susan Glaspell, Josiah Grinnell, Charles Hearst, Josephine Herbst, Herbert Hoover, Inkpaduta, Louis Jolliet, MacKinlay Kantor, Keokuk, Aldo Leopold, John L. Lewis, Marquette, Elmer Maytag, Christian Metz, Bertha Shambaugh, Ruth Suckow, Billy Sunday, Henry Wallace, and Grant Wood. Excerpt from the entry on: Gallup, George Horace (November 19, 1901–July 26, 1984)—founder of the American

Institute of Public Opinion, better known as the Gallup Poll, whose name was synonymous with public opinion polling around the world—was born in Jefferson, Iowa. . . . A New Yorker article would later speculate that it was Gallup’s background in “utterly normal Iowa” that enabled him to find “nothing odd in the idea that one man might represent, statistically, ten thousand or more of his own kind.” . . . In 1935 Gallup partnered with Harry Anderson to found the American Institute of Public Opinion, based in Princeton, New Jersey, an opinion polling firm that included a syndicated newspaper column called “America Speaks.” The reputation of the organization was made when Gallup publicly challenged the polling techniques of The Literary Digest, the best-known political straw poll of the day. Calculating that the Digest would wrongly predict that Kansas Republican Alf Landon would win the presidential election, Gallup offered newspapers a money-back guarantee if his prediction that Franklin Delano Roosevelt would win wasn’t more accurate. Gallup believed that public opinion polls served an important function in a democracy: “If govern-ment is supposed to be based on the will of the people, somebody ought to go and find what that will is,” Gallup explained.

This book is the most comprehensive reference ever written for individuals interested in law enforcement selection. The chapters contain meta-analyses (statistical reviews of the literature) investigating the validity of methods used to predict police performance. These methods include education requirements, cognitive ability, background variables (e.g., military experience, arrest record, discipline problems at work), personality inventories, interest inventories, physical agility tests, assessment

centers, and interviews. The first chapter in the book is a short primer on meta-analysis that informs the reader about the purpose of meta-analysis and how to interpret the meta-analysis tables contained in the book. Chapter 2 describes the methods used to conduct the meta-analyses for this project. Chapters 3-11 list the meta-analysis results for the various predictors of police performance. Chapter 12 describes a meta-analysis of the relationships among criteria (e.g., performance ratings, discipline problems, commendations), Chapter 13 describes a meta-analysis of the relationships among selection methods, and Chapter 14 describes a meta-analysis of the relationship between the various criteria and sex, race, age, and tenure. Chapter 15 summarizes the previous chapters and identifies future research needs.

In recent years, personality assessment by professional psychologists has taken on an increasingly important role in the field of police work. Most importantly, personality assessment instruments have been utilized in the pre-employment psychological screening of police officer candidates. This psychological screening takes place at the end of the hiring process to ensure that candidates do not have personality characteristics or existing psychopathology that would interfere with their job performance. Personality assessment is also used for other applications in police psychology. These applications include fitness-for-duty evaluations (FFDEs) and second opinion evaluations of officers who challenge hiring decisions. Moreover,

police psychologists are involved in a considerable amount of research in order to determine which tests and scales are most appropriate for evaluations. The present volume is divided into four parts to cover the relevant issues in personality assessment for police work. Part I provides an introduction and the basic principles of personality assessment in police psychology. Part II focuses on the major assessment instruments used in police psychology. These include the MMPI-2, the Personality Assessment Inventory (PAI), the Inwald Personality Inventory (IPI) and Hilson Tests, the M-PULSE Inventory, pre-offer integrity instruments, and the Rorschach Comprehensive System. Part III examines multiple issues in personality assessment research in the field of police psychology. Part IV covers applications of personality assessment in police psychology. These applications include pre-employment evaluations, fitness for duty evaluations, conditional second opinion psychological evaluations of candidates, using multiple sources of information when conducting mandatory or required evaluations, and the politics of personality assessment in police agencies. This unique and comprehensive text is designed for psychologists who are actively working in the field of law enforcement, including psychologists in both applied and research/academic settings. The new edition of this basic reference for the practicing clinical

and behavioral neuropsychologist and text for graduate student expands its coverage of the major areas in which clinical neuropsychologists work.

The transition from high school is challenging for any student, but for young adults with disabilities, it can be even more difficult. In addition to adjusting to increased academic demands in an environment where there is less structure and support, students have to navigate a disability services system that is very different from the one they knew in high school. But with the proper preparation, students can enjoy success! This practical guide explains how the system for accommodations works, describes students' rights and responsibilities within that system, and employs the voices of seasoned professionals and college students to explain the skills and strategies students should develop while they are in high school to ensure success when they reach college. As a bonus, it also offers answers to questions students with disabilities

frequently ask about disclosing their disability in the admissions process.
