This book is an introductory outline of NFPA 72, 2010 edition based upon the National Fire Protection Association training seminar in Fire Alarm Inspection and Testing given in December 2009. This book concentrates on Inspections as opposed to Testing and gives a foundation in the NFPA 72, 2010 edition of the National Fire Alarm Code book for Inspections as a separate job function. The purpose of this book is to clarify to other inspectors, managers, customers, and authorities having jurisdiction; when to inspect and when to test; based upon the National Fire Protection Association training seminar in December 2009.

This important new manual goes beyond the published NFPA standards on installation of standpipe systems to include the rules in the International Building Code, municipal fire codes, the National Fire Code of Canada, and information on inspection, testing, and maintenance of standpipe systems. Also covered are the interactions between standpipe and sprinkler systems, since these important fire protection systems are so frequently installed together. Illustrated with design examples and practical applications to reinforce the learning experience, this is the go-to reference for engineers, architects, design technicians, building inspectors, fire inspectors, and anyone that inspects, tests or maintains fire protection systems. Fire marshals and plan review authorities that have the responsibility for reviewing and accepting plans and hydraulic calculations for standpipe systems are also an important audience, as are firefighters who actually use standpipe systems. As a member of the committees responsible for some of these documents, Isman also covers the rules of these standards and codes as they are written, but also provides valuable insight as to the intent behind the rules. A noted author and lecturer, Professor Isman was an engineer with the National Fire Sprinkler Association (NFSA), is an elected Fellow of the Society of Fire Protection Engineers (SFPE), and currently Clinical Professor in the Department of Fire Protection Engineering at University of Maryland. /div
