Edition

reviewing existing  
fire flow

calculation

methodologies in

the U.S. and

globally, the

authors

determine the

new information

necessary to

validate the

existing fire flow

calculation

methodologies.  
After identifying  
19 methods from  
the U.S., UK,  
France, Germany,  
the Netherlands,  
New England, and  
Canada, two  
types of methods  
are evaluated:  
those for building  
planning based  
on fire and

building code requirements, and those for on-scene fire service use. Building planning methods are also examined, including an explanation of the range of building variables that determine fire

flow. A survey form for fire departments is provided to help fire departments identify key predictive features based on construction and building parameters. Researchers and professionals in
