

Nissan Primera 1999 Engine

The Japanese motor industry worldwide.

Forty years ago, Buzz Aldrin became the second human - minutes after Neil Armstrong - to set foot on a celestial body other than the Earth. The event remains one of mankind's greatest achievements and was witnessed by the largest worldwide television audience in history. In the years since, millions more have had their earth-centric perspective changed forever by gazing at the iconic photograph of Aldrin standing on the surface of the Moon with the blackness of space behind him. He described what he saw as 'magnificent desolation'. The flight of Apollo 11 made Aldrin one of the most famous people on the planet, yet few people know the rest of the story. In *Magnificent Desolation*, Aldrin not only gives us a harrowing first-person account of the lunar landing that came within seconds of failure, as well as the ultimate insider's view of life as one of the superstars of America's space program, he also opens up with remarkable candor about his more personal trials - and eventual triumphs - back on Earth. From the glory of being part of the mission that fulfilled President Kennedy's challenge to reach the Moon before the decade was out, Aldrin returned home to an Air Force career stripped of purpose or direction, other than as a public relations tool that NASA put to relentless use in a seemingly nonstop world tour. The twin demons of depression and alcoholism emerged - the first of which Aldrin confronted early and publicly and the second of which he met with denial until it nearly killed him. As an adventure story, a searing memoir of self-destruction and self-renewal, and as a visionary rallying cry to once again set our course for Mars and beyond, *Magnificent Desolation* is the thoroughly human story of a genuine hero.

This report examines the application of plastics in European cars in the middle of the year 2000. It evaluates the changes in use and considers possible developments over the next decade. The use of plastics for specific components is examined, comparison is made between competitive materials and examples of commercial application are included. Estimates are presented for current plastics usage in European cars with forecasts to 2008.

This book revisits the long contested negotiation between the Thatcher administration and Nissan for the latter's first green-field plant in Europe. From the very beginning, the plant took Britain's EC/EU membership and tariff-free access to the single market as a token. A considerable amount of aid including component supplies was provided to attract Japanese investment and to prevent its transfer to the continent. The successful launch of Sunderland highlighted improved Anglo-Japanese relations and put an end to the Japan-EC/EU trade conflict. But the price was paid by Nissan's slump and fall, and by trade unions in both countries failing to keep counterchecks on management. Brexit and the fall of Carlos Ghosn were a double blow to Anglo-Japanese relations which are in a state of drift and need redefinition.

The North of England has claimed more inward investment form East Asia than any other region in Britain, or indeed any region in the other member states of the European Union. Specialists from business organization and management join with political economists and geographers to consider how this Foreign Direct Investment (FDI) has influenced change in the region, and plot the dynamics of this particularly British phenomenon.

Ward's Auto World

This book tells the story of the modern car industry from the inside. What is it really like to work for the carmakers – the industrial giants that influence the daily lives of millions? How are mass-production cars really designed, engineered, and manufactured? What does it take to engineer a successful vehicle? The story is told through the author's own journey around the globe – starting as a young graduate engineer working for Nissan in the UK, to working for Nissan in Japan and, finally, for Renault in France as Chief Engineer of its ‘halo’ sports-car, designed to relaunch the Alpine brand. It tells the behind-the-scenes story of three well-known vehicles, whose development teams were led by the author – the Nissan Qashqai, the Renault ZOE, and the Alpine A110 – revealing some of the fascinating stories of how these vehicles came into being. The book seeks to show the real work that goes on behind the glamour of the Motor Shows and the well-honed corporate press releases – work that is sometimes exciting, but often grindingly difficult.
