This book describes the latest research on the geological, geochemical, geochronological, biological, and geomorphic evolution of the unique and relatively pristine landscape of the Cape Mountains and the Karoo Basin, a region in South Africa that is currently being targeted for shale gas exploration and development. With up-to-date graphics, maps, drill-core and seismic data, it offers the latest observations and synthesis, and highlights areas of ongoing research. The work presented also considers a wider connection of the Cape-Karoo system to other basins in Central Gondwana, including South America, thus

In what ways does access to undergraduate education have a transformative impact on people and societies? What conditions are required for this impact to occur? What are the pathways from an undergraduate education to the public good, including inclusive economic development? These questions have particular resonance in the South African higher education context, which is attempting to tackle the challenges of widening access and improving completion rates in in a system in which the

segregations of the apartheid years are still apparent. Higher education is recognised in core legislation as having a distinctive and crucial role in building post-apartheid society. Undergraduate education is seen as central to addressing skills shortages in South Africa. It is also seen to yield significant social returns, including a consistent positive impact on societal institutions and the development of a range of capabilities that have public, as well as private, benefits. This book offers comprehensive contemporary evidence that allows for a fresh engagement with these pressing issues.

This book is an examination of post-colonial land reforms across various African states. One of the decisive contradictions of colonialism in Africa was the distortion of use, access to and ownership of land. Land related issues and the need for land reform

have consistently occupied a unique position in public discourse in Africa. The post-colonial African states have had to embark on concerted efforts at redressing historical grounded land policies and addressing the growing needs of land by the poor. However, agitations for land continue, while evidence of policy gaps abound. In many cases, policy change in terms of land use, distribution and ownership has reinforced inequalities and affected power and social relations in respective post-colonial African countries.

Land has assumed major causes of structural violence and impediments to human and rural development in Africa; hence the need for holistic assessment of land reforms in post-colonial African states. The central objective of the text is to identify post-independence and current trends in land reform and to address the grievances in relation to land use, ownership and distribution. The book suggests practicable policy options towards addressing the land hunger and conflict, which could derail the 'moderate' socio-

The past ten years in South Africa has seen many changes in education - the creation of a single department of education; common examinations for all learners in public schools in the country, a new outcomes based education curriculum which was introduced to learners in the general education and training phase since 1998 and will be introduced to the further education and training phase from 2006. To evaluate the success of these changes South African researchers still use the indicator of student achievement. The matriculation examination is the visible, high profile and public performance indicator. Every year parents, learners, teachers, researchers, government officials, policymakers, and the general public get involved in the debate around the matric examination with the most frequently asked questions being - Did the pass rate go up? Are standards dropping? Are the results real

This book provides university teachers, leaders and policymakers with evidence on how researchers in several countries are monitoring and improving student engagement—the extent to which students are exposed to and participate in effective educational practices. It captures insights from international implementations of the National Survey of Student Engagement (NSSE), developed in the United States. In the last half decade NSSE has been adapted and used in several other countries, producing the largest international collaboration yet involving educationally relevant data on students' engagement in higher education. Leaders of

established national collaborations draw on their experiences with hundreds of institutions to contribute their insights. Framed by their cultural and educational contexts, they discuss issues concerning first-year learners, international students, part-time and distance learners, as well as teaching and leadership in support of student learning. Each chapter outlines strategies based on national case studies and presents perspectives supported by concrete examples of how these have played out in diverse settings. The book suggests mechanisms that can be used by institutions, ministries and quality agencies around the world.

This volume in the Monographs in Evolutionary Biology series addresses issues that are part of an emerging area of research loosely called "molecular evolution." Its practitioners include both molecular biologists curious about the evolutionary implications of their data and evolutionary biologists pushing their analyses to the molecular level. The union of these fields of molecular and organismal biology has been turbulent at times, and, as shall be seen, this

dialectic has led to some very serious challenges to long-held notions about the role of natural selection in evolution and the economy of genome organization in eukaryotes. As an inevitable outgrowth of molecular biology, molecular evolution is necessarily a young discipline, but it can already point proudly to two major discoveries. The first, is the molecular clock, a concept that has emerged from the analysis of at least four data sets-amino acid sequences, immunologic data, DNA renaturation studies, and, recently, analyses of DNA

sequences. The reality of a strong stochastic component in the evolution of nucleotide sequences can no longer be doubted, although the accuracy of the clock with regard to particular sequences and within particular groups of organisms should be independently measured each time it is used. Nevertheless, molecular clocks will assume increasingly important roles in phylogenetic reconstructions, especially since the fossil record is so fragmentary. The second major discovery of molecular evolution has been the incredible
