A cross-disciplinary approach is offered to consider the challenge of emerging technologies designed to enhance human bodies and minds. Perspectives from philosophy, ethics, law, and policy are applied to a wide variety of

**enhancements,
including integration
of technology within
human bodies, as
well as genetic,
biological, and
pharmacological
modifications.**

**Humans may be
permanently or
temporarily
enhanced with
artificial parts by**

**manipulating (or
reprogramming)
human DNA and
through other
enhancement
techniques (and
combinations
thereof). We are on
the cusp of
significantly
modifying (and
perhaps improving)
the human**

ecosystem. This evolution necessitates a continuing effort to re-evaluate current laws and, if appropriate, to modify such laws or develop new laws that address enhancement technology. A legal, ethical, and policy

**response to current
and future human
enhancements
should strive to
protect the rights of
all involved and to
recognize the
responsibilities of
humans to other
conscious and living
beings, regardless of
what they look like
or what abilities they**

have (or lack). A potential ethical approach is outlined in which rights and responsibilities should be respected even if enhanced humans are perceived by non-enhanced (or less-enhanced) humans as “no longer human” at all.

"The book develops in precise terms the genetic structure, cross-breedings, and varieties of the numerous strawberry species. Large portions of this volume are devoted to detailed accounts of the experimental work on the strawberry in

all parts of the world. The numerous contributors and their contributions to the development of the plant are fully discussed".--BOOKJACKET.

U.S. Arctic waters north of the Bering Strait and west of the Canadian border encompass a vast

area that is usually ice covered for much of the year, but is increasingly experiencing longer periods and larger areas of open water due to climate change. Sparsely inhabited with a wide variety of ecosystems found nowhere else, this

region is vulnerable to damage from human activities. As oil and gas, shipping, and tourism activities increase, the possibilities of an oil spill also increase. How can we best prepare to respond to such an event in this challenging environment?

**Arctic Marine
Environment reviews
the current state of
the science regarding
oil spill response and
environmental
assessment in the
Arctic region north
of the Bering Strait,
with emphasis on the
potential impacts in**

U.S. waters. This report describes the unique ecosystems and environment of the Arctic and makes recommendations to provide an effective response effort in these challenging conditions.

**According to
Responding to Oil
Spills in the U.S.**

Arctic Marine Environment, a full range of proven oil spill response technologies is needed in order to minimize the impacts on people and sensitive ecosystems. This report identifies key oil spill research priorities, critical

data and monitoring needs, mitigation strategies, and important operational and logistical issues. The Arctic acts as an integrating, regulating, and mediating component of the physical, atmospheric and

cryospheric systems that govern life on Earth. Not only does the Arctic serve as regulator of many of the Earth's large-scale systems and processes, but it is also an area where choices made have substantial impact on life and choices everywhere on planet

Earth. This report's recommendations will assist environmentalists, industry, state and local policymakers, and anyone interested in the future of this special region to preserve and protect it from damaging oil spills.
