Human behavior and decision making is subject to social and motivational influences such as emotions, norms and self/other regarding preferences. The identification of the neural and psychological mechanisms underlying these factors is a central issue in psychology, behavioral economics and social neuroscience, with important clinical, social, and even political implications. However, despite a continuously growing interest from the scientific community, the processes underlying these factors, as well as their ontogenetic and phylogenetic development, have so far remained elusive. In this Research Topic we collect articles that provide challenging insights and stimulate a fruitful controversy on the question of “what determines social behavior”. Indeed, over the last decades, research has shown that introducing a social context to otherwise abstract tasks has diverse effects on social behavior. On the one hand, it may induce individuals to act irrationally, for instance to refuse money, but on the other hand it improves individuals’ reasoning, in that formerly difficult abstract problems can be easily solved. These lines of research led to distinct (although not necessarily mutually exclusive) models for socially-driven behavioral changes. For instance, a popular theoretical framework interprets human behavior as a result of a conflict between cognition and emotion, with the cognitive system promoting self-interested choices, and the emotional system (triggered by the social context) operating against them. Other theories favor social norms and deontic heuristics in biasing human reasoning and encouraging choices that are sometimes in conflict with one’s interest. Few studies attempted to disentangle between these (as well as other) models. As a consequence, although insightful results arise from specific domains/tasks, a comprehensive theoretical framework is still missing. Furthermore, studies employing neuroimaging techniques have begun to shed some light on the neural substrates involved in social behavior, implicating consistently (although not exclusively) portions of the limbic system, the insular and the prefrontal cortex. In this context, a challenge for present research lies not only in further mapping the brain structures implicated in social behavior, or in describing in detail the functional interaction between these structures, but in showing how the implicated networks relate to different theoretical models. This is Research Topic hosted by members of the Swiss National Center of Competence in Research “Affective Sciences – Emotions in Individual Behaviour and Social Processes”. We collected contributions from the international community which extended the current knowledge about the psychological and neural structures underlying social behavior and decision making. In particular, we encouraged submissions from investigators arising from different domains (psychology, behavioral economics, affective sciences, etc.) implementing different techniques (behavior, electrophysiology, neuroimaging, brain stimulations) on different populations (neurotypical adults, children, brain damaged or psychiatric patients, etc.). Animal studies are also included, as the data reported are of high comparative value. Finally, we also welcomed submissions of meta-analytical articles, mini-reviews and perspective papers which offer provocative and insightful interpretations of the recent literature in the field.

Sustainability Accounting, Management Control and Reporting: A European Perspective traces a picture of innovative performance measurement tools and approaches to drive organizations to implement their shared value and sustainability strategy, considering different perspectives around accounting, managerial control and reporting. In recent years, organizations managing their responsible approach with relevance and pressure from stakeholders and regulations has proven to be a major challenge. During the first two decades of the 21st century, many companies have reached a real maturity in this area and have deployed coherent responsible approaches that are integrated into their overall strategy. It is now a matter of steering these responsible approaches from an accounting and managerial standpoint, but also of reporting on them. It requires the simultaneous use of comprehensive accounting, controlling and reporting tools. This book provides an innovative perspective on sustainable management control, comprehensive accounting and integrated reporting, presenting the most recent proposals and the main critical issues. Aimed at researchers, academics, managers, business leaders and advanced students, the book will be especially valuable to those in the fields of corporate social responsibility, strategic management, and accounting.

The Performance Strategy Practice & Revision Kit allows you to apply your knowledge by putting theory in to practice. It contains three complete mock exams and many past exam questions on every area of the syllabus. The questions are supported by detailed solutions and tips on how to approach questions and earn easy marks. Through practice, you are equipped with the best techniques to face the exam and earn the maximum number of marks.

In Project Risk Governance, Dieter Fink breaks new ground in two ways. Firstly, he places project risk management in the context of today’s organisations in which objectives are increasingly implemented through projects to better respond to fast-changing markets. Secondly, he applies a governance perspective to examine project risk at the project and corporate levels, an approach which is significantly under-researched and for which theoretical knowledge and professional practice are at an early stage of maturity. Project risk governance falls between corporate governance and project governance and is attracting increasing attention. The author argues that there are two reasons for this. The first is the ‘projectisation’ of organisations, in particular within organisations conforming to the Project-Based Organisation (PBO) model. The second is the prevalence of a strategic approach to managing risk for the purposes of protecting organisational values and creating competitive advantage. The book addresses governance, strategy, value management and building enterprise-wide Project Risk Governance (PRG) capabilities. Chapters examine the role of projects in organisations and the need to integrate project and business strategy within the framework of the Project-Based Organisation. PRG is introduced via its links with corporate and project governance and its scope is covered in chapters that identify relevant processes, structures and relationship mechanisms. Contextual influences such as the professionalisation of project management are recognised and insights provided to increase readers’ understanding of uncertainty, risk events, and probabilities and of the essential requirements of managing risks at project level. The final chapter provides a roadmap to the stages and dimensions of a PRG maturity model.

Increasing Professionalism in Public Finance Management

Are you looking for an engaging, decision-focussed approach to financial reporting that encourages students to develop their interpretative skills? Building on the success of the first edition, this textbook takes a ‘how, why, what’ approach to financial accounting, interwoven in each chapter. From chapter one, students understand how financial information is prepared and presented, why it is prepared and presented in this way, and what the resulting financial information means for users. Designed for students taking a step beyond their introductory financial accounting training, the textbook equips them with all the key tools they will require when they enter professional practice. Reflective of the latest International Financial Reporting Standards (IFRS) and International Accounting Standards (IAS), this textbook delivers concise, clear explanations of all the key issues in accounting standards that students need to know. Content maps to professional accounting body syllabi, making this the perfect choice for accounting courses which offer exemptions. Chapters are rich with 3 types of examples to enhance understanding: - Illustrative examples of real-world situations; - Worked examples demonstrating the calculation of figures required for financial statements; - Extracts from company annual reports demonstrate how the theory relates to financial reporting in practice. More engaging, more balanced, and more applied than other offerings, this is exactly the textbook your financial reporting students need! An extensive Online Resource Centre accompanies the textbook and includes: For students: DT Solutions to all the end-of-chapter questions in the book including walkthroughs of solutions to key questions; DT Additional graded questions including professional body questions; DT Additional interpretative case studies based on real-life companies; DT A guided tour through a company report DT Specific study skills tips for accounting students For lecturers: DT Customisable PowerPoint slides DT Solutions to all the additional online questions DT Outline solutions to the interpretative case studies DT Group discussion questions

African audiences and users are rapidly gaining in importance and increasingly targeted by global media companies, social media platforms and mobile phone operators. This is the first edited volume that addresses the everyday lived experiences of Africans in their interaction with different kinds of media: old and new, state and private, elite and popular, global and national, material and virtual. So far, the bulk of academic research on media and communication in Africa has studied media through the lens of media-state relations, thereby adopting liberal democracy as the normative ideal and examining the potential contribution of African media to development and democratization. Focusing instead on everyday media culture in a range of African countries, this volume contributes to the broader project of provincializing and decolonizing audience and internet studies.

This textbook is a refreshingly clear introduction to the core accounting topics that non-specialist students need to master. Designed to help students learn key principles, reinforce understanding, and apply accounting concepts to real business decisions, it is an ideal first stepping stone into the world of accounting. Peter Scott’s Accounting for Business:· Offers full coverage of key accounting concepts in an authoritative mannerwhilst remaining sensitive to the needs of non-specialist students in employing an excellent writing style and clarity of explanation;· Firmly sets accounting principles in context through a varietyof newspaper articles and online media to help students understand the relevance of accounting to a variety of business professions;· Uses running examples across Financial and Management Accounting so students can strengthen their understanding of the material covered as the author regularly reviews and recaps information;· Is a complete solution to teaching accounting, offering a brand new online learning and assessment tool, Dashboard. The Dashboard courseoffers a test bank of over 500 ready-to-use questions, tailored specifically to this text, which can be automatically graded to cut down time spent marking.· Dashboard also offers students numerousopportunities to revisit, reinforce and revise their understanding, through the provision of an online workbook fully integrated with the chapter material.

This volume examines the range of Non-Trade Concerns (NTCs) that may conflict with international economic rules and proposes ways to protect them within international law and international economic law. Globalization without local concerns can endanger relevant issues such as good governance, human rights, right to water, right to food, social, economic, cultural and environmental rights, labor rights, access to knowledge, public health, social welfare, consumer interests and animal welfare, climate change, energy, environmental protection and sustainable development, product safety, food safety and security. Focusing on China, the book shows the current trends of Chinese law and policy towards international standards. The authors argue that China can play a leading role in this context: not only has China adopted several reforms and new regulations to address NTCs; but it has started to play a very relevant role in international negotiations on NTCs such as climate change, energy, and culture, among other. While China is still considered a developing country, in particular from the NTCs’ point of view, it promises to be a key actor in international law in general and, more specifically, in international economic law in this respect. This volume assesses, taking into consideration its special context, China’s behavior internally and externally to understand its role and influence in shaping NTCs in the context of international economic law.

This book discusses the foundations of social and environmental accounting and highlights local differences in countries like Italy and Bulgaria. It also describes the institutional environment, which affects the development and application of environmental accounting and reporting, as a basis for evaluating current achievements and the future steps that need to be taken to develop and spread environmental accounting. The book is unique in presenting exemplary cases from different emerging and developed countries. It is a valuable resource for theorists in the field, practitioners in companies, as well as investors and other stakeholders. Moreover, it provides students with the necessary theoretical constructs, empirical studies as well as practical and managerial tools to allow for a quick orientation in the methodology, techniques and selected practices used in environmental accounting and reporting.

This proceedings book presents a multidisciplinary perspective on risk and risk management. Featuring selected papers presented at the European Risk Research Network (ERRN) 8th European Risk Conference “Multiple Perspectives in Risk and Risk Management” held in Katowice, Poland, it explores topics such as risk management systems, risk behaviors, risk culture, big data and risk reporting and

regulation. The contributors adopt a wide variety of theoretical approaches and either qualitative or quantitative methodologies. Contemporary companies operate in a highly dynamic environment, accompanied by the constant development of the information technology, making decision-making processes highly complex and increasing the risk related to company performance. The European Risk Research Network (ERRN) was established in 2006 with the aim of stimulating cross-disciplinary research in the area of risk management. The network includes academics and industry experts from the fields of accounting, auditing, financial economics and mathematical finance. To keep the network lively and fruitful, regular “European Risk Conferences” are organized to present papers from a broad spectrum of risk and risk management areas. Featuring contributions for Italy, South Africa, Germany and Poland, this proceedings book is a valuable reference resource for students, academics, and practitioners in risk and risk management

In the 21st century, environmental harm is an ever-present reality of our globalised world. Over the last 20 years, criminologists, working alongside a range of other disciplines from the social and physical sciences, have made great strides in their understanding of how different institutions in society, and criminal justice systems in particular – respond – or fail to respond – to the harm imposed on ecosystems and their human and non-human components. Such research has crystallised into the rapidly evolving field of green criminology. This pioneering volume, with contributions from leading experts along with younger scholars, represents the state of the art in criminologists’ pursuit of understanding in the environmental sphere while at the same time challenging academics, lawmakers and policy developers to explore new directions in the study of environmental harm.

Stelae dating to the Epiclassic and Early Postclassic from Tula, Xochicalco, and other sites in Central Mexico have been cited as evidence of Classic Maya `influence' on Central Mexican art during these periods. This book re-evaluates these claims via detailed comparative analysis of the Central Mexican stelae and their claimed Maya counterparts.

In recent years, artificial intelligence has increasingly been playing an essential role in diverse areas in medicine, assisting clinicians in patient management. In nephrology and transplantation, artificial intelligence can be utilized to enhance clinical care, such as through hemodialysis prescriptions and the follow-up of kidney transplant patients. Furthermore, there are rapidly expanding applications and validations of comprehensive, computerized medical records and related databases, including national registries, health insurance, and drug prescriptions. For this Special Issue, we made a call to action to stimulate researchers and clinicians to submit their invaluable works and present, here, a collection of articles covering original clinical research (single- or multi-center), database studies from registries, meta-analyses, and artificial intelligence research in nephrology including acute kidney injury, electrolytes and acid-base, chronic kidney disease, glomerular disease, dialysis, and transplantation that will provide additional knowledge and skills in the field of nephrology and transplantation toward improving patient outcomes.

In countries such as the United Kingdom, the need to manage fi nances in a professional manner has been hampered by the severe fi scal constraints of the 2008 fi nancial crisis. These pressures are likely to persist in the long term as a result of an aging population and rising public expectations of the quality of public services. Whereas much attention has been paid to technical reforms to improve budgeting, expenditure control, accounting, and auditing, less attention has been given to the process of developing skilled financial managers, whose expertise is key to sustained improvement in the management of public finances. Successive governments in the United Kingdom have recognized the need to strengthen professionalism in financial management, but the financial crisis gave an additional impetus for change. This change has been refl ected in policy statements, changes in recruitment and human resource management practices, and the development of professional networks in accounting, audit, procurement, and project management. Increasing Professionalism in Public Finance Management: A Case Study of the United Kingdom describes the journey from a civil service where generalist skills were overwhelmingly preferred toward one where professional technical skills in finance are recognized and valued. This book represents one of a number of country case studies aimed at sharing information about alternative paths and models to help developing countries seeking to strengthen public fi nancial management skills on a long-term sustainable basis. This book will be of importance to public policy makers and public practitioners looking for ways to improve the quality of public sector management and to a range of professional finance/ management bodies looking to strengthen their relevance to the government sector.

Peter Scott's Introduction to Management Accounting provides a thorough but accessible and engaging introduction to the subject for first year students. This highly practical textbook uses a multitude of worked and real life examples, supportive learning features, crystal clear explanations, and extensive online resources (all fully integrated with the book) to guide students towards a confident understanding of the fundamentals of management accounting. Scott's lively writing style sets the numerical content within an easy-to-follow narrative, and the real life relevance of each tool or technique is explained at every turn. All key areas of first year management accounting courses are covered to provide a solid foundation for more advanced modules. The book's online resources include a wealth of materials which can be downloaded into a university's local VLE. The student resources include: - Interactive Multiple Choice Questions for revising key topics; - Numerical exercises for practising the calculation of accounting information from given sets of data; - 'Go back over this again' features containing a mix of further examples, written exercises, true or false questions, and annotated accounting information to help consolidate learning and revise or revisit concepts; - 'Show me how to do it' videos that provide practical demonstrations of dealing with more complex accounting tasks; - Web links for primary source material and articles through which readers can learn more about the companies and organizations discussed in the book. Lecturer resources include PowerPoint slides, examples and solutions, and hundreds of ready-to-use multiple-choice questions, all arranged by chapter. Lecturers can choose to make the online materials available to their students via Dashboard, a learning and assessment tool which provides sophisticated analytics for student achievement and engagement with the resources, also facilitating discussions and course updates.

Tinnitus is the perception of a sound when no external sound is present. The severity of tinnitus varies but it can be debilitating for many patients. With more than 100 million people with chronic tinnitus worldwide, tinnitus is a disorder of high prevalence. The increased knowledge in the neuroscience of tinnitus has led to the emergence of promising treatment approaches, but no uniformly effective treatment for tinnitus has been identified. The large patient heterogeneity is considered to be the major obstacle for the development of effective treatment strategies against tinnitus. This eBook provides an inter- and multi-disciplinary collection of tinnitus research with the aim to better understand tinnitus heterogeneity and improve therapeutic outcomes.

This books draws a comparative balance of twenty years' international media assistance in the five countries of the Western Balkans. The central question was what happens to imported models when they are transposed onto the newly evolving media systems of transitional societies. Albania, Bosnia-Herzegovina, Kosovo, Macedonia and Serbia undertook a range of media reforms to conform with accession requirements of the European Union and the standards of the Council of Europe, among others. The essays explore the nexus between the democratic transformation of the media and international media assistance. The cross-national analysis concludes that the effects of international assistance are highly constrained by the local context. From today's vantage point it becomes obvious, that scaling media assistance does not necessarily improve outcomes. The experiences in the region suggest that imported solutions have not been very cognitive in all aspects of local conditions but international strategies tent to be rather schematic and lacked strategic approaches to promote media policy stability, credible media reform and implementation. The book offers valuable insights into the nature and effects of media assistance and the strategies deployed by international aid agencies, local political forces, media professionals, civil society organizations and other actors.

What Determines Social Behavior? Investigating the Role of Emotions, Self-Centered Motives, and Social Norms

"Written under the direction of West Point social sciences faculty for its Student Conference on US Affairs, or SCUSA, the contributors to this edited volume introduce undergraduate students to issues of transnational conflict, providing context to a variety of contemporary issues, such as immigration, terrorism, and environmental security. The goal is to challenge students by sparking policy level debate and formulation of policy recommendations, putting students in the driver's seat and asking them to think as policymakers. Well acquainted with the demands of classroom discussion, the contributors know how to make world politics, international relations, and foreign policy accessible to undergraduate students. The primary question driving the volume is "how does the US promote or even determine an effective and appropriate policy response to boundary-spanning problems?" And if future political and military leaders are all but guaranteed to face the challenge of collective action within the confines of an uncoordinated international system, then what domestic and foreign factors should be considered, what elements brought to the foreground? The book's three part organization--Transnational Challenges and Domestic Sources of U.S. Foreign Policy; Transnational Challenges and Regional Issues in US Foreign Policy; and Transnational Challenges and Opportunities for U.S. Foreign Policy--coupled with topic-recommended reading lists at the end of each chapter will help students develop an approach to the substantial topic of "foreign policy" as a whole, making it more manageable" --
