In Kidney to Share, Martha Gershun tells the story of her decision to donate a kidney to a stranger. She takes readers through the complex process by which such donors are vetted to ensure that they are physically and psychologically fit to take the risk of a major operation. John D. Lantos, a physician and bioethicist, places Gershun's story in the larger context of the history of kidney transplantation and the ethical controversies that surround living donors. Together, they help readers understand the discoveries that made transplantation relatively safe and well as the legal, ethical, and economic policies that make it feasible. Gershun and Lantos explore the steps involved in recovering and allocating organs. They analyze the differences that arise depending on whether the organ comes from a living donor or one who has died. They observe the expertise—and the shortcomings—of doctors, nurses, and other professionals and describe the burdens that we place on people who are willing to donate. In this raw and vivid book, Gershun and Lantos ask us to consider just how far society should go in using a person's body parts in order to save another person. Kidney to Share provides an account of organ donation that is both personal and analytical. The combination of perspectives leads to a profound and compelling exploration of a largely opaque practice. Gershun and Lantos pull back the curtain to offer readers a more transparent view of the fascinating world of organ donation.

Where once surgical patients with cancer were placed in specialized care centres trained and certified oncology nurses, surgical oncology patients are now often found on mixed units housing similar surgical patient populations and often in the care of nurses who are not specialized in oncology. In today's changing climate, oncology nurses work much more closely with a diverse team of healthcare professionals and having an intimate knowledge of the surgical oncology patient and treatment process has become even more important. Surgical Oncology Nursing provides you a detailed examination of surgical patients with cancer from diagnosis to survivorship. The care of the surgical patient with cancer involves a diverse healthcare team with many hands touching the patient at different stages, and the editors of this new book bring a varied set of backgrounds, from nurse navigation to advanced practice nursing.Chapters provide you with a full view of the process for a variety of patients with cancer. You'll gain details in areas such as diagnosis, preoperative and perioperative care, nutritional care, surgical wounds and ostomy care, as well as survivorship issues. In addition, you'll gain insight into implications for pediatric and geriatric patients. You'll also get details on surgical procedures used on patients with cancer, including robotic minimally invasive surgery, interventional radiology, intraoperative radiation therapy, and reconstructive surgery. The core of the book focuses on the surgical care needed for patients with different types of tumours. Surgical Oncology Nursing reviews a variety of tumour types, from breast cancer to skin cancer, and details the specifics for the care of each patient population. In all, 11 types of cancers are reviewed, providing you the comprehensive information you need. Whether care is provided in a dedicated, oncology setting or within a diverse patient care environment, you'll need the type of knowledge found in Surgical Oncology Nursing to provide the best care possible for this unique patient population.
