

## Nutrition And Diet Therapy 8th Edition DeBruyne Jizhoure

This work talks about the taking in and use of food and other nourishing material by the body. Nutrition is a 3-part process. First, food or drink is consumed. Second, the body breaks down the food or drink into nutrients. Third, the nutrients travel through the bloodstream to different parts of the body where they are used as fuel and for many other purposes. To give the body proper nutrition, a person has to eat and drink enough of the foods that contain key nutrients. This new book examines new research in this field which is belatedly receiving the proper attention.

As the AIDS crisis continues, nutrition therapy has taken an important role in maximizing the body's capacity to fight HIV infection and AIDS as well as improving the quality of life when living with AIDS. Nutritional Care of HIV-Positive Persons: A Manual for Individuals and Their Caregivers presents principles, rules, and directions needed to address diet and nutrition issues for those living with HIV, with or without a diagnosis of AIDS. Written by nutritionists who have experience with AIDS, this "how-to" manual balances traditional sources of information with common experiences. It addresses all groups, including women, infants, and children, reflecting the spread of the disease into all segments of the population. Discussion of selected topics are spiced with "how to" specifics that provide information on how nutrition can be used to maximize the body's capacity to fight HIV infection and AIDS. Focusing only on nutrition, Nutritional Care of HIV-Positive Persons fills the gap between "brochures" and scholarly research publications. INTRODUCTION Welcome to the new Prentice Hall Reviews and Rationales Series! This 9-book series has been specifically designed to provide a clear and concentrated review of important nursing knowledge in the following content areas: Child Health Nursing/Maternal-Newborn Nursing/Mental Health Nursing/Medical-Surgical Nursing/Pathophysiology/Pharmacology/Nursing Fundamentals/Nutrition and Diet Therapy/Drugs, Electrolytes, & Acid-Base Balance. The books in this series have been designed for use either by current nursing students as a study aid for nursing course work or NCLEX-RN licensing exam preparation, or by practicing nurses seeking a comprehensive yet concise review of a nursing specialty or subject area. This series is truly unique. One of its most special features is that it has been authored by a large team of nurse educators from across the United States and Canada to ensure that each chapter is written by a nurse expert in the content area under study. Prentice Hall Health representatives from across North America submitted names of nurse educators and/or clinicians who excel in their respective fields, and these authors were then invited to write a chapter in one or more books. The consulting editor for each book, who is also an expert in that specialty area, then reviewed all chapters submitted for comprehensiveness and accuracy. The series editor designed the overall series in collaboration with a core Prentice Hall team to take full advantage of Prentice Hall's cutting edge technology, and also reviewed the chapters in each book. All books in the series are identical in their overall design for your convenience (further details follow at the end of this section). As an added value, each book comes with a comprehensive support package, including free CD-ROM, free companion website access, and a Nursing Notes card for quick clinical reference. STUDY TIPS Use of this review book should help simplify your study. To make the most of your valuable study time, also follow these simple but important suggestions: Use a weekly calendar to schedule study time and follow the timeframes for all of your activities (home, school, appointments, etc.) on a weekly calendar. Find the "holes" in your calendar—the times in which you can plan to study. Add study sessions to the calendar at times when you can expect to be mentally alert and follow it. Create the optimal study environment. Eliminate external sources of distraction, such as television, telephone, etc. Eliminate internal sources of distraction, such as hunger, thirst, or dwelling on items or problems that cannot be worked on at the moment. Take a break for 10 minutes or so after each hour of concentrated study both as a reward and an incentive to keep studying. Use pre-reading strategies to increase comprehension of chapter material. Skim the headings in the chapter (because they identify chapter content). Read the definitions of key terms, which will help you learn new words to comprehend chapter information. Review all graphic aids (figures, tables, boxes) because they are often used to explain important points in the chapter. Read the chapter thoroughly but at a reasonable speed. Comprehension and retention are actually enhanced by not reading too slowly. Do take the time to reread any section that is unclear to you. Summarize what you have learned. Use questions supplied with this book, CD-ROM, and companion website to test your recall of chapter content. Review again any sections that correspond to questions you answered incorrectly or incompletely. TEST TAKING STRATEGIES Use the following strategies to increase your success on multiple-choice nursing tests or examinations: Get sufficient sleep and have something to eat before taking a test. Take deep breaths during the test as needed. Remember, the brain requires oxygen and glucose as fuel. Avoid concentrated stressors before a test, however, to avoid rapid upward and then downward surges in blood glucose levels. Read each question carefully, identifying the stem, the four options, and any key words or phrases in either the stem or options. Key words in the stem such as "most important" indicate the need to pre-empt priorities, since more than one option is likely to contain a statement that is technically correct. Remember that the presence of absolute words such as "never" or "only" in an option is more likely to make that option incorrect. Determine who is the client in the question; often this is the person with the health problem, but it may also be a significant other, relative, friend, or another nurse. Decide whether the response stem or a false response stem. With a true response stem, the correct answer will be a true statement, and vice-versa. Determine what the question is really asking, sometimes referred to as the issue of the question. Evaluate all answer options in relation to this issue, and not strictly to the "correctness" of the statement in each individual option. Eliminate options that are obviously incorrect, then go back and reread the stem. Evaluate the remaining options against the stem once more. If two answers seem similar and correct, try to decide whether one of them is more global or comprehensive. If the global option includes the alternative option within it, it is likely that the more global response is the correct answer. THE NCLEX-RN LICENSING EXAMINATION The NCLEX-RN licensing examination is a Computer Adaptive Test (CAT) that ranges in length from 75 to 265 individual (stand-alone) test items, depending on individual performance during the examination. Upon graduation from a nursing program, successful completion of this exam is the gateway to your professional nursing practice. The blueprint for the exam is reviewed and revised every three years by the National Council of State Boards of Nursing according to the results of a job analysis study of new graduate nurses (practicing within the first six months after graduation). Each question on the exam is coded to one or more Client Need Category and one or more Integrated Concepts and Processes. Client Need Categories There are 4 categories of client needs, and each exam will contain a minimum and maximum percent of questions from each category.

Each major category has subcategories within it. The Client Need categories according to the NCLEX-RN Test Plan effective April 2001 are as follows: Safe, Effective Care Environment/Management of Care (7-13%) Safety and Infection Control (5-11 %) Health Promotion and Maintenance/Growth and Development/Throughout the Lifespan (7-13%) Prevention and Early Detection of Disease (5-11 %) Psychosocial Integrity/Coping and Adaptation (11%) Physiological Adaptation (5-11%) Physiological Integrity: Basic Care and Comfort (7-13%) Pharmacological and Parenteral Therapies (5-11%) Reduction of Risk Potential (12-18%) Physiological Adaptation (12-18%) Integrated Concepts and Processes The integrated concepts and processes identified on the NCLEX-RN Test Plan effective April 2001, with condensed definitions, are as follows: **Nursing Process: scientific problem-solving approach used in nursing practice, consisting of assessment, analysis, planning, implementation, and evaluation. Carrying client-nurse interaction(s) characterized by mutual respect and trust and directed toward achieving desired client outcomes. Communicative and Documentation: verbal and/or nonverbal interactions between nurse and others (client, family, health care team); a written or electronic recording of activities or events that occur during client care. Cultural Awareness: knowledge and sensitivity to the client's beliefs/values and how these might impact on the client's healthcare experience. Self-Care: assisting clients to meet their health care needs, which may include maintaining health or restoring function. Teaching/Learning: facilitating client's acquisition of knowledge, skills, and attitudes that lead to behavior change. In several chapters, one of the questions will have embedded art to use in answering the question. Some of the newly developed NCLEX test items are also designed in this way, so these items will give you valuable practice with this type of question. Companion Website (CW) The companion website is a "virtual" reference for virtually all your needs! The CW contains the following: 50 NCLEX-style questions: 10 pretest, 10 posttest, 10 CD-ROM, and 20 additional new questions. Definitions of key terms: the glossary is also stored on the companion website for ease of reference. In-Depth WITH NCLEX: features drawings or photos that are each accompanied by a one- to two-paragraph explanation. These are especially useful when describing something that is complex, technical (such as equipment), or difficult to mentally visualize. Suggested Answers to Practice to Pass and Case Study Questions: easily located on the companion website. Practice to Pass questions: these are end-of-chapter questions that stimulate critical thinking and reinforce mastery of the chapter content. NCLEX Alerts: the NCLEX icon identifies information or concepts that are likely to be tested on the NCLEX licensing examination. Be sure to learn the information flagged by this type of icon. Case Study: found at the end of the chapter, it provides an opportunity for you to use your critical thinking and clinical reasoning skills to "put it all together." It describes a true-to-life client case situation and asks you open-ended questions about how you would provide care for that client and/or family. Posttest: a 10-question multiple-choice test at the end of the chapter provides new questions that are representative of chapter content, and provide you with feedback about mastery of that content following review and study. All pretest and posttest questions contain rationales for the correct answer, and are coded according to the phase of the nursing process used and the NCLEX category of client need (called the Test Plan). The Test plan codes are PHYS (Physiological Integrity), PSYC (Psychosocial Integrity), SECE (Safe/Effective Care Environment), and HPM (Health Promotion and Maintenance). CD-ROM For those who want to practice taking tests on a computer, the CD-ROM that accompanies the book contains the pretest and posttest questions found in all chapters of the book. In addition, it contains 10 NEW questions for each chapter to help you further evaluate your knowledge base and hone your test-taking skills.
