*The world of investment is fascinating and, at the same time, enigmatic. The investor's behaviour the world over had oscillated between panic and enthusiasm, guided by the psychological forces of fear and greed. What investment should be held? When should an investment be bought? How long an investment should be held? When is the right time to dispose an investment? How can a profit be made through investments? There is no magic mantra that assures investors on these issues. Only knowledgeable investors can minimize investment-related risks through systematic planning and efficient and effective management of their investments. Investment Analysis and Portfolio Management helps you gain that knowlegde. It will be useful to academicians and practitioners and offers a scientific approach to investment management, comprehensive coverage of theory, tools, and techniques of investments, a focus on stock market instruments and is richly illustrated to help understand methods of processing investment information.*

This textbook is designed as a core text for finance courses that cover market investments, portfolio formation, and the management of investment portfolios. As such, the text seeks to convey insight and actual wisdom as to the nature of these activities. When combined with a commitment to thinking independently, the text offers the student a rigorous preparation for entry to the funds management industry. The text is presented in three parts. In Part A, the text introduces the fundamental techniques of investment analysis: a "bottom-up" and "top-down" analysis of the firm aimed at an evaluation of the underlying share as a "buy", "hold", or a "sell" recommendation. Part B offers the reader an intuitive grasp of the nature of investment growth, both across time and across assets. Part C introduces the reader to the technicalities of portfolio construction and portfolio management. The text concludes with an assessment of the funds management industry. The text builds in step-by-step stages with Illustrative Examples that consolidate the student's progress and understanding through each chapter. Each of parts A, B, and C (above) has sufficient material to justify a separate course. If the student has exposure to a more foundational course in finance, Parts A and B can be covered as a single course. If from other courses, the student is familiar with the essence of Parts A and B and with statistical concepts, the text can be covered as a single course. The text can therefore be presented readily at either an undergraduate or postgraduate level at a pace appropriate to the student's prior exposure to the concepts.
