

Official Catalogue Of Swiss Watch Repair Parts A New Standard Guide For The Ordering Of Genuine Swiss Watch Parts Part 1

World watch production today is concentrated in three countries: Switzerland, Japan and China. Former centres such as Great Britain, France, the United States and Russia saw the industrial manufacture of watches disappear from their territory during the twentieth century. How did this situation come about? The business of time aims to answer this question by presenting the first comprehensive history of the sector. It traces the evolution and transformation of the global watch industry from the mid-nineteenth to the present day, highlighting the conditions that enabled watch production to expand across the globe and revealing how multinational companies gradually emerged to dominate the industry.

Written in French and English, Edward Heaton's catalogue provides a brief history of modern watchmaking and introduces the Swiss watches created by Mido. This vintage short from 1939 covers watch characteristics, genres and Swiss watchmaking production methods. This charming work is now being republished in a new modern edition complete with reprints of the plates featured in the original version and a brand new commissioned introduction.

This book tackles the history of the Swiss watch industry in a global perspective: it gives particular attention to rival nations such as the United Kingdom, the USA and Japan. The author demonstrates how Swiss watchmakers succeeded in facing various challenges: the industrialization of production at the end of the 19's, the delocalization of production in the interwar years and globalization since the 1960's. These challenges helped Switzerland to maintain and strengthen its position as a leader on the world market. This study shows how innovation and new technologies, the industrial policy of the Swiss authorities, the industrial district organization and the relations with trade unions explain the worldwide success of the Swiss watch industry.
