Water Related Education, Training and Technology Transfer is a component of Encyclopedia of Water Sciences, Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. Learning processes offer knowledge, skills, and competencies to the individual through different methods of education and training. The learning society and the concept of lifelong learning form the basis for the so-called "knowledge-based" economy. Since water resources development and management are an essential part of this economy, education, training, and transfer of technology for water resources should be seen as important aspects of societal policies for a sustainable future. This book starts with a little history, and introduces several issues related to water resources in the learning environment. What does

the water profession expect from education? We must consider the methods and tools used the need to match demand and supply, and quality assessment of education and training. Transfer of technology to close the technology gap between countries can only be effective if an enabling learning environment exists. Capacity building must ensure that this environment is sustainable. This volume is aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

It hasn't taken Web developers long to discover that when it comes to creating dynamic, database-driven Web sites, MySQL and PHP provide a winning open source combination. Add this book to the mix, and there's no limit to the powerful, interactive Web sites that developers can create. With step-by-step instructions, complete scripts, and expert tips to guide readers, veteran author and database designer Larry Ullman gets right down to business: After grounding readers with separate discussions of first the scripting language (PHP) and then the database program (MySQL), he goes on to cover security, sessions and cookies, and using additional Web tools, with several sections devoted to creating sample applications. This guide is indispensable for intermediate- to advanced level Web designers who want to replace their static sites with something dynamic. In this edition, the bulk of the new material covers the latest versions of both technologies: PHP 6 and MySQL 5. The book's publication date is likely to beat the official release of PHP 6, making it one of the first books available on the subject.

The Internet of Things (IoT) has contributed greatly to the growth of data traffic on the Internet. Access technologies and object constraints associated with the IoT can cause performance and security problems. This relates to important challenges such as the control of radio communications and network access, the management of service quality and energy consumption, and the implementation of security mechanisms dedicated to the IoT. In response to these issues, this book presents new solutions for the management and control of performance and security in the IoT. The originality of these proposals lies mainly in the use of intelligent techniques. This notion of intelligence allows, among other things, the support of object heterogeneity and limited capacities as well as the vast dynamics characterizing the IoT.

The global shift toward delivering services online requires organizations to evolve from using traditional paper files and storage to more modern electronic methods. There has however been very little information on just how to navigate this change-until now. **Implementing Electronic Document and Record Management Systems** explains how to efficiently store and access electronic documents and records in a manner that allows quick and efficient access to information so an organization may meet the needs of its clients. The book addresses a host of issues related to electronic document and records management systems (EDRMS). From starting the project to systems administration, it details every aspect in relation to implementation and management processes. The text also explains managing cultural changes and business process re-engineering that organizations undergo as they switch from paper-based records to electronic documents. It offers case studies that examine how various organizations across the globe have implemented EDRMS. While the task of creating and employing an EDRMS may seem daunting at best, **Implementing Electronic Document and Record Management Systems** is the resource that can provide you with the direction and guidance you need to make the transition as seamless as possible.

Electronic Publishing: State of the Art Report provides an overview of the state of knowledge in electronic publishing. This Report is organized into three parts: Invited Papers, Analysis, and Bibliography. The Invited Papers describe some of the problems of producing effective commercial versions of electronic document transfer systems, drawing on the experience of participants in the DOCDEL project funded by the Commission of the European Communities (CEC). These projects show many interesting and potentially important possibilities for commercial activity, in areas ranging from authoring systems designed to help the electronic origination of scientific and mathematical works, to developments in the field of storing and transmitting graphical information. The Analysis assesses major advances in electronic publishing. The Analysis is constructed by the editor of the Report to provide a balanced and comprehensive view of the latest developments in electronic publishing. The editor's personal analysis of the subject is supplemented by quotations from the Invited Papers, written by leading authorities on the subject. The Bibliography is a specially selected compilation of the most important published material on the subject of electronic publishing. Each key item in the literature is reviewed and annotated to assist in selecting the required information.

In this book, educational consultant and group coach Donna Reid argues that popular vehicles for improving school cultures and student achievement, such as professional learning communities and critical friends groups, too often fail because the participants are unaware or unwilling to make the required changes for successful collaboration and change. To assist facilitators and group leaders, the author presents narrative cases that examine the experiences of teacher leaders, principals, consultants, and parents as they negotiate the difficulties of reluctant team members, hostile colleagues, maintaining group interest, sharing responsibility, using technology, and cultural competency. Each case includes questions for reflection that can be used individually or in small groups to improve facilitation skills. **Book Features:** Addresses the roles of the facilitator and participants. Focuses on the complex contexts in which educators must work. Illustrates a range of challenges with possible ways to manage them. Offers strategies for building sustainable relationships, such as how to include new colleagues and work with difficult people. Discusses common tensions, such as sharing responsibility, respecting confidentiality, and developing cultural competence. "With its engaging and informative mix of case descriptions, discussions following the cases, and questions for the reader, this book is a welcome change from other books on facilitation and coaching. As I read, I imagined that someone had been looking over my shoulder as I coached my first CFG, and as I have supported others doing the same over the years. A must-read for all those engaging in their first few years of facilitating collaborative teacher teams!" —Gene Thompson-Grove, educational consultant and founding board member, School Reform Initiative "This book is a must-read for anyone in the practice of collaborative coaching and facilitation. By tapping into the power of story, the author provides a reflective space that allows the reader to consider coaching moves, as well as experience and reflect on common potential pitfalls in coaching or facilitating a group." —P. Tim Martindell, president, Texas Council of Teachers of English Language Arts, Coordinator Secondary ELA, Fort Bend Independent School District

The Web is a global information space consisting of linked documents and linked data. As the Web continues to grow and new technologies, modes of interaction, and applications are being developed, the task of the Semantic Web is to unlock the power of information available on the Web into a common semantic information space and to make it available for sharing and processing by automated tools as well as by people. Right now, the publication of large datasets on the Web, the opening of data access interfaces, and the encoding of the semantics of the data extend the current human-centric Web. Now, the Semantic Web community is tackling the challenges of how to create and manage Semantic Web content, how to make Semantic Web applications robust and scalable, and how to organize and integrate information from different sources for novel uses. To foster the exchange of ideas and collaboration, the International Semantic Web Conference brings together researchers and practitioners in relevant disciplines such as artificial intelligence, databases, social networks, distributed computing, Web engineering, information systems, natural language processing, soft computing, and human-computer interaction. This volume contains the main proceedings of ISWC 2008, which we are excited to offer to the growing community of researchers and practitioners of the Semantic Web. We got a tremendous response to our call for research papers from a truly international community of researchers and practitioners from 41 countries submitting 261 papers. Each paper received an average of 3.
