Andreu describes the Egyptians as they spend a day in the marshes with family and friends. They glide on light skiffs through the papyrus plants, stopping occasionally to marvel at the marsh creatures: frogs, butterflies, kingfishers, ibises, herons, lapwings, weasels, and mongooses. Because the marshes also shelter crocodiles and hippopotamuses, the day is not without its perils.

Today's calendar is set in the minds of many people by the World Series, Wimbledon, the Super Bowl, and the World Cup, rather than by months and days. Sport must mean something. What? Richard Mandell's Sport: A Cultural History shows that sport has always vividly illustrated and reinforced the existing social and moral order. Considering that much of modern sport has evolved in England and America, it is remarkable that so few comprehensive serious studies of sport have appeared in English. This fascinatingly written, generously illustrated volume fills a gap in the literature of world cultural history. The author deals here not only with sport in the classical world where the Olympics were born, but also with sport in early industrial England, China, Japan, and modern America.

This is a short pamphlet-like book that describes the current state of computer technology and its' impact upon the Humanities. The discipline of History is specifically chosen to be analyzed, because it is the most vulnerable to being trivialized and erased from the increasingly technically-oriented school and university curriculum. The problems of what history is, what it means, and how it can deal with the computer age are all discussed and a solution is proposed. This book is for anyone with an interest in philosophy of computer science, philosophy of history or philosophy of science.

The book is organised around three broad themes, exploring key ideas and debates that have occurred during the last 20 or so years: the meanings of the term 'visual culture' and of the various practices that form its basis; conceptual approaches to the contemporary analysis of visual culture the cultural, social and historical contexts informing its production, distribution and consumption Drawing on a wide range of examples from the last 100 years, the book adopts a cross-disciplinary perspective: It also explores, however, the limits of visual culture as an interdisciplinary field of study, engaging in current debates about the uses and value of the study of visual culture. Contains the proceedings of the First International Conference on Sustainable Planning and Development, to be held on Skiathos Island, Greece, October 1-3, 2003. Sustainable planning and development 2003 will address the subjects of spatial planning and regional development in an integrated way as well as in accordance with the principles of sustainability. It has become apparent, in the beginning of the 21st century, that planners, environmentalists, engineers, policy makers and economists have to work together in order to ensure that planning and development can meet our present needs without compromising the ability of future generations to meet their own requirements. In recent years, there has been in many countries an increase in spatial problems that has led to planning crises. Planning problems are often connected with uneven development, deterioration of the quality of urban life and destruction of the environment. The increasing urbanisation of the world coupled with the global issues of environmental pollution, resources shortage and economic restructuring demand that we make our cities places worth living in. On the other hand, problems of environmental management and planning are not restricted to urban areas. Environments such as rural areas, forests, coastal regions and mountains face their own problems that require urgent solutions in order to avoid irreversible damages. The use of modern technologies in planning, such as geographical information systems and remote sensing, give us new potential to monitor and prevent environmental degradation. Effective strategies for management should consider planning and regional development, two closely related disciplines, and emphasize the demand to handle these matters in an integrated way. This conference is the first that faces the challenge of providing a common forum for all scientists, specializing in the range of subjects included within sustainable planning and development. Specific topics covered include: Urban Planning; Environmental Economics; Geo-Informatics; Rural Planning; Regional Economics; Social Issues; Environmental Legislation and Policy; Resources Management; Waste Management; Utilities and Networks; Ecosystem Analysis and Protection; Remediation and Recovery.

As a result, however, the family of her intended husband breaks their marriage agreement. And as she enters adolescence, Ailin finds that her family is no longer willing to support her. Chinese society leaves few options for a single woman of good family, but with a bold conviction and an indomitable spirit, Ailin is determined to forge her own destiny.
