*Although the construction industry employs only five percent of the nation's work force, it suffers 20 percent of the nation's occupational fatalities and 12 percent of all U.S. injuries. Because of this the Occupational Safety and Health Administration (OSHA) has consolidated their construction standards, compliance assistance, cooperative programs, and technical services to form the Directorate of Construction. Construction sites and operations have become the prime targets for the Directorate of Construction, which has greatly increased its number of inspections, citations and penalties. The Handbook*

The construction industry has a distressingly poor safety record, whether measured in absolute terms or alongside other industries. The level of construction safety in a country is influenced by factors such as variations in the labour forces, shifting economies, insurance rates, legal ramifications and the stage of technological development. Yet the problem is a world-wide one, and many of the ways of tackling it can be applied across countries. Effective tools include designing, preplanning, training, management commitment and the development of a safety culture. The introduction and operation of effective safety management systems represents a viable way forwards, but these systems are all too rarely implemented. How can this be done?

# Download Ebook Osha 10 Construction Final Exam Answers

Should we go back to prescriptive legislation? This book considers these questions by drawing together leading-edge research papers from the proceedings of an international conference conducted by a commission (W099) on Safety and Health on Construction Sites of CIB, the international council of building research organisations.
