New York City popout® is a portable, comprehensive, and multipart map to this international destination. Complete with easy-to-read color maps, this pocket-size guide includes at-a-glance travel information about New York City. The PopOut maps detail downtown and central Manhattan; three smaller maps provide overviews of the city's transit system and Greenwich Village. Additional details show places of interest, historic sites, shopping, parks, and more.

This book is about the next generation of the Google Maps API. It will provide the reader with the skills and knowledge necessary to incorporate Google Maps version 3 on web pages in both desktop and mobile browsers. It also describes how to deal with common problems that most map developers encounter at some point, like performance and usability issues with having too many markers and possible solutions to that. What is innovation and how should it be measured? Understanding the scale of innovation activities, the characteristics of innovative firms and the internal and systemic factors that can influence innovation is a prerequisite for the pursuit and analysis of policies aimed at fostering innovation.

A concise, modern textbook on group theory written especially for physicists Although group theory is a mathematical subject, it is indispensable to many areas of modern theoretical physics, from atomic physics to condensed matter physics, particle physics to string theory. In particular, it is essential for an understanding of the fundamental forces. Yet until now, what has been missing is a modern, accessible, and self-contained textbook on the subject written especially for physicists. Group Theory in a Nutshell for Physicists fills this gap, providing a user-friendly and classroom-tested text that focuses on those aspects of group theory physicists most need to know. From

the basic intuitive notion of a group, A. Zee takes readers all the way up to how theories based on gauge groups could unify three of the four fundamental forces. He also includes a concise review of the linear algebra needed for group theory, making the book ideal for self-study. Provides physicists with a modern and accessible introduction to group theory Covers applications to various areas of physics, including field theory, particle physics, relativity, and much more Topics include finite group and character tables; real, pseudoreal, and complex representations; Weyl, Dirac, and Majorana equations; the expanding universe and group theory; grand unification; and much more The essential textbook for students and an invaluable resource for researchers Features a brief, self-contained treatment of linear algebra An online illustration package is available to professors Solutions manual (available only to professors)

One day Sophie comes home from school to find two questions in her mail: "Who are you?" and "Where does the world come from?" Before she knows it she is enrolled in a correspondence course with a mysterious philosopher. Thus begins Jostein Gaarder's unique novel, which is not only a mystery, but also a complete and entertaining history of philosophy.

This insightful book explores the relationship between theater and digital culture. The authors show that the marriage of traditional performance with new technologies leads to an upheaval of the implicit "live" quality of theatre by introducing media interfaces and Internet protocols, all the while blurring the barriers between theater-makers and their audience.

Universal Methods of Design provides a thorough and critical presentation of 100 research methods, synthesis/analysis techniques, and research deliverables for human centered design, delivered in a concise and accessible format perfect for designers, educators, and students. Whether research is already an integral part of a practice or curriculum, or whether it has been unfortunately avoided due to perceived limitations of time, knowledge, or resources, Universal Methods of Design will serve as an invaluable compendium of methods that can be easily referenced and utilized by cross-disciplinary teams in nearly any design project. Universal Methods of Design : dismantles the myth that user research methods are complicated, expensive, and time-consuming ; creates a shared meaning for cross-

disciplinary design teams ; illustrates methods with compelling visualizations and case studies ; characterizes each method at a glance ; indicates when methods are best employed to help prioritize appropriate design research strategies. Universal Methods of Design distills each method down to its most powerful essence, in a format that will help design teams select and implement the most credible research methods best suited to their design culture within the constraints of their projects.

This book examines a new trend affecting cartography and geographic information science. Presenting the work of over 30 authors from 16 different countries, the book provides an overview of current research in the new area of Internet Cartography. Chapters deal with the growth of this form of map distribution, uses in education, privacy issues, and technical aspects from the point of view of the map provider - including Internet protocols such as XML and SVG. Many see the Internet as a revolution for cartography. Previously tied to the medium of paper and expensive large-format color print technology, maps had a limited distribution and use. The Internet made it possible to not only distribute maps to a much larger audience but also to incorporate interaction and animation in the display. Maps have also become timelier with some maps of traffic and weather being updated every few minutes. In addition, it is now possible to access maps from servers throughout the world. Finally, the Internet has made historic maps available for viewing to the public that were previously only available in map libraries with limited access. * Provides comprehensive coverage of maps and the internet * Delivers a global perspective * Combines theoretical and practical aspects

For more than forty years Jan Gehl has helped to transform urban environments around the world based on his research into the ways people actually use—or could use—the spaces where they live and work. In this revolutionary book, Gehl presents his latest work creating (or recreating) cityscapes on a human scale. He clearly explains the methods and tools he uses to reconfigure unworkable cityscapes into the landscapes he believes they should be: cities for people. Taking into account changing demographics and changing lifestyles, Gehl emphasizes four human issues that he sees as essential to successful city planning. He explains how to develop cities that are Lively, Safe, Sustainable, and Healthy. Focusing on these issues leads Gehl to think of even the largest city on a very small scale. For Gehl, the urban landscape must be considered through the five human senses and experienced at the speed of walking rather than at the speed of riding in a car or bus or train. This small-scale view, he argues, is too frequently neglected in contemporary projects. In a final chapter, Gehl makes a plea for city planning on a human scale in the fast- growing cities of developing countries. A "Toolbox," presenting key principles, overviews of methods, and keyword lists, concludes the book. The book is extensively illustrated with over 700 photos and drawings of examples from Gehl's work around the globe.

Salman Abu Sitta, who has single-handedly made available crucial mapping work on Palestine, was just ten years old when he left his home near Beersheba in 1948, but as for many Palestinians of his generation, the profound effects of that traumatic loss would form the defining feature of his life from that moment on. In this rich and moving memoir, Abu Sitta draws on oral histories and personal recollections to vividly evoke the vanished world of his family and home from the late nineteenth century to the eve of the British withdrawal from Palestine and subsequent war. Alongside accounts of an idyllic childhood spent on his family's farm estate Abu Sitta gives a personal and very human face to the dramatic events of 1930s and 1940s Palestine, conveying the acute sense of foreboding felt by Palestinians as Zionist ambitions and militarization expanded under the mandate. Following his family's flight to Gaza during the 1948 mass exodus of Palestinians from their homes, Abu Sitta continued his schooling and university education in Cairo, where he witnessed the heady rise of Arab nationalism after the overthrow of King Farouk in 1952 and the momentous events surrounding the Israeli invasion of Sinai and Gaza in 1956. With warmth and humor, he chronicles his peripatetic exile's existence, as an engineering student in Nasser's Egypt, his crucial, formative years in 1960s London, his life as a family man and academic in Canada, and several sojourns in Kuwait, all against the backdrop of seismic political events in the region, including the 1967 and 1973 Arab-Israeli wars, the 1982 Israeli invasion of Lebanon, and the 1991 Gulf War. Abu Sitta's narrative is imbued throughout with a burning sense of justice, a determination to recover and document what rightfully belongs to his people, an aim given poignant expression in his painstaking cartographic and archival work on Palestine, for which he is justifiably acclaimed.

At the turn of the fourteenth century in Scotland, young Archie Forbes becomes involved with both William Wallace and Robert the Bruce in the struggle for Scottish independence from English rule.

Textbooks are symbols of centuries-old education. They're often outdated as soon as they hit students' desks. Acting "by the textbook" implies

compliance and a lack of creativity. It's time to ditch those textbooks--and those textbook assumptions about learning In Ditch That Textbook, teacher and blogger Matt Miller encourages educators to throw out meaningless, pedestrian teaching and learning practices. He empowers them to evolve and improve on old, standard, teaching methods. Ditch That Textbook is a support system, toolbox, and manifesto to help educators free their teaching and revolutionize their classrooms.

Now available for Pre-Order! A common resolution set at the beginning of a new year is to "get my financial house in order." But how can you build a house, let alone pour any kind of foundation, without a blueprint? There are dozens of books and gurus trying to push their advice and tell you how to spend and invest your money. And then, there are three suburban dads just trying to make the world a little bit better. Meet Brad Barrett and Jonathan Mendonsa of the award-winning ChooseFI podcast and Chris Mamula of the popular blog "Can I Retire Yet?". They have walked the talk and now want to share their knowledge with you. Together, these three regular guys will show you how they did something extraordinary. They are all financially independent and doing meaningful work that fulfills them. All three left their corporate 9 to 5 jobs and are reaping the benefits of extra time with their families. Mirroring the format of the popular ChooseFI podcast, this book pulls from the collective knowledge of those who have decided to build a lifestyle around their passions instead of allowing their finances to dictate their future. These stories demonstrate universal principles, giving you the opportunity to pick the elements that are the most applicable to your financial situation and "choose your own adventure." The book covers a wide range of topics that will help you build a strong financial foundation: Developing a growth mindset Defining your values and aligning them with your spending Cutting years from your estimated retirement date Questioning the status quo on "required expenses" Cutting travel expenses and putting family vacations within your reach Learning how to earn more and live with abundance Updating the commonly accepted wisdom on college education and the debt associated with it Cutting through the noise on investing to discover strategies that work Showing how to implement investment strategies that enable the lifestyle you desire while controlling downside risk FI or Financial Independence is the new debt-free and getting back to 0 is just the beginning of a wonderful journey. Whether you have mountains of debt now or are recently debt free and wondering what to do next, Choose FI: Your Blueprint to Financial Independence will give you the information to guide your next move.

Little did Isaac Newton, Charles Darwin and other 'gentlemen scientists' know, when they were making their scientific discoveries, that some centuries later they would inspire a new field of scientific practice and innovation, called citizen science. The current growth and availability of citizen science projects and relevant applications to support citizen involvement is massive; every citizen has an

opportunity to become a scientist and contribute to a scientific discipline, without having any professional qualifications. With geographic interfaces being the common approach to support collection, analysis and dissemination of data contributed by participants, 'geographic citizen science' is being approached from different angles. Geographic Citizen Science Design takes an anthropological and Human-Computer Interaction (HCI) stance to provide the theoretical and methodological foundations to support the design, development and evaluation of citizen science projects and their user-friendly applications. Through a careful selection of case studies in the urban and non-urban contexts of the Global North and South, the chapters provide insights into the design and interaction barriers, as well as on the lessons learned from the engagement of a diverse set of participants; for example, literate and non-literate people with a range of technical skills, and with different cultural backgrounds. Looking at the field through the lenses of specific case studies, the book captures the current state of the art in research and development of geographic citizen science and provides critical insight to inform technological innovation and future research in this area.
"The Israeli-Palestinian peace process is the story of the defining failure of the entire two-state peace paradigm, a rote religion that still dominates the international discourse on Palestine. In its two first parts - Anatomy of a Seminal Mis-encounter and A Savage War for Peace - this book is an insider account of the July 2000 Camp David summit and the negotiations that followed it, amid the Second Intifada, the cruelest war on Palestine since 1948, until the last days of Bill Clinton's presidency. Clinton's Peace Parameters were the "final product" of that endeavor. The failure of Camp David is also explained through the drama of the interplay between its main actors, Ehud Barak, Bill Clinton and Yasser Arafat. The Third Part -Defying the Imperatives of Conflict Resolution - comprises six chapters that offer an interpretive account of all peace negotiations to this day; a description of the occupation's traits of permanence; the inherent contradictions of the two-state solution; a scrutiny of ominous alternatives such as the binational state, an Israeli unilateral pullout from much of the West Bank and Donald Trump's Deal of the Century; and a discussion of the "Jordanian option", a solution with a long pedigree here revisited. Underlining the singularity of the Israeli-Palestinian conflict, the last essay examines it in a broad comparative perspective. The Epilogue addresses the consequences of Israel's supposed defeat of the Palestinian national movement on her moral profile and international standing"--

From the visionary bestselling author of The Second World and How to Run the World comes a bracing and authoritative guide to a future shaped less by national borders than by global supply chains, a world in which the most connected powers—and people—will win. Connectivity is the most revolutionary force of the twenty-first century. Mankind is reengineering the planet, investing up to ten trillion dollars per year in transportation, energy, and communications infrastructure linking the world's burgeoning megacities together. This has profound consequences for geopolitics, economics, demographics, the environment, and social identity. Connectivity, not geography, is our destiny. In Connectography, visionary strategist Parag Khanna travels from Ukraine to Iran, Mongolia to North Korea, Pakistan to Nigeria, and across the Arctic Circle and the South China Sea to explain the rapid and unprecedented changes affecting every part of the planet. He shows how militaries are deployed to protect supply chains as much as borders, and how nations are less at war over territory than engaged in tugs-of-war over pipelines, railways, shipping lanes, and Internet cables. The new arms race is to connect to the most markets—a race China is now winning, having launched a wave of infrastructure investments to unite Eurasia around its new Silk Roads. The United States can only regain ground by fusing with its neighbors into a super-continental North American Union of shared resources and prosperity. Connectography offers a unique and hopeful vision for the future. Khanna argues that new energy discoveries and technologies have eliminated the need for resource wars; ambitious transport corridors and power grids are unscrambling Africa's fraught colonial borders; even the Arab world is evolving a more peaceful map as it builds resource and trade routes across its war-torn landscape. At the same time, thriving hubs such as Singapore and Dubai are injecting dynamism into young and heavily populated regions, cyber-communities empower commerce across vast distances, and the world's ballooning financial assets are being wisely invested into building an inclusive global society. Beneath the chaos of a world that appears to be falling apart is a new foundation of connectivity pulling it together. Praise for Connectography "Incredible . . . With the world rapidly changing and urbanizing, [Khanna's] proposals might be the best way to confront a radically different future."—The Washington Post "Clear and coherent . . . a well-researched account of how companies are weaving ever more complicated supply chains that pull the world together even as they squeeze out inefficiencies. . . . [He] has succeeded in demonstrating that the forces of globalization are winning."—Adrian Woolridge, The Wall Street Journal "Bold . . . With an eye for vivid details, Khanna has . . . produced an engaging geopolitical travelogue."—Foreign Affairs "For those who fear that the world is becoming too inward-looking, Connectography is a refreshing, optimistic vision."—The Economist "Connectivity has become a basic human right, and gives everyone on the planet the opportunity to provide for their family and contribute to our shared future. Connectography charts the future of this connected world."—Marc Andreessen, general partner, Andreessen Horowitz "Khanna's scholarship and foresight are world-class. A must-read for the next president."—Chuck

Wolf Hollow meets The Thing About Jellyfish in Danielle Binks's debut middle grade novel set in 1999, where a twelve-year-old girl grapples with the meaning of home and family amidst a refugee crisis that has divided her town. "Timeless and beautiful, and it deserves to be read by people of all ages." —Printz Award-winning author Melina Marchetta If you asked eleven-year-old Fred to draw a map of her family, it would be a bit confusing. Her birth father was never in the picture, her mom died years ago, and her stepfather, Luca, is now expecting a baby with his new girlfriend. According to Fred's teacher, maps don't always give the full picture of our history, but more and more it feels like Fred's family is redrawing the line of their story . . . and Fred is feeling left off the map. Soon after learning about the baby, Fred hears that the town will be taking in hundreds of refugees seeking safety from a war-torn Kosovo. Some people in town, like Luca, think it's great and want to help. Others, however, feel differently, causing friction within the community. Fred, who has been trying to navigate her own feelings of displacement, ends up befriending a few refugees. But what starts as a few friendly words in Albanian will soon change their lives forever, not to mention completely redrawing Fred's personal map of friends, family, and home, and community.
