Inhaltsangabe:Introduction: I have chosen the topic of using pop songs in the EFL classroom because I strongly believe that working with pop songs is a highly motivational device. When I was a student at a lower and upper secondary school, listening to songs in English classes was my favourite activity. I have always wanted to be able to understand the lyrics of songs I listened to. Later, I realized that I have learned a lot from listening to pop songs and analyzing their lyrics. Therefore, in my diploma project, I would like to prove that using pop songs is a highly motivational device in teaching English with instructional value, and that students enjoy working with pop songs. The theoretical part of this diploma project is based on relevant sources of background literature. In the first two chapters, the use of songs is described with regard to motivation and the Multiple Intelligences Theory. The third and fourth chapter deal with the reasons for using songs and their classification. In the last two chapters of the theoretical part, pedagogical principles of using pop songs in class, as well as the pros and cons of teaching through pop songs are presented. The practical part is based on the findings of three surveys I have conducted in the field of using songs in the EFL classroom. In the first part of the research, I present an analysis of questionnaires which I distributed among English teachers at lower and upper secondary schools and grammar schools. In the second part of the research, I describe students' attitudes to pop song based lessons which I taught during my teaching practice at grammar schools. In the third part of the research, I analyze the types of songs presented in commonly used textbooks at lower and upper secondary schools. In addition, I present a self-developed teaching material containing a list of pop songs suitable for the EFL classroom. In the last part of the practical part, I answer the research questions and provide some implications for my own teaching. The Oxford Handbook of Project Management presents and discusses leading ideas in the management of projects. Positioning project management as a domain much broader and more strategic than simply 'execution management', this Handbook draws on the insights of over 40 scholars to chart the development of the subject over the last 50 years or more as an area of increasing practical and academic interest. It suggests we could be entering an emerging 'third wave' of analysis and interpretation following its early technical and operational beginnings and the subsequent shift to a focus on projects and their management.

Topics dealt with include: the historical evolution of the subject; its theoretical base; professionalism; business and societal context; strategy; organization; governance; innovation; overruns; risk; information management; procurement; relationships and trust; knowledge management; practice and teams. This handbook is of particular relevance to those interested in the research issues underlying project management.

Doing Oral History is considered the premier guidebook to oral history, used by professional oral historians, public historians, archivists, and genealogists as a core text in college courses and throughout the public history community. Over the past decades, as recording technology has continued to alter the practice of oral history, making it even easier to produce quality recordings and to disseminate them on the Internet. This basic manual offers detailed advice on setting up an oral history project, conducting interviews, and building oral history collections in archives and libraries, and teaching and presenting oral history. Using the existing Q&A format, the third edition asks new questions and augments previous answers with new material, particularly in these areas: 1. Technology: As both a tool and a specific equipment, but weighs the merits of the types of technology available for audio and video recording, transcription, preservation, and dissemination. Information about web sites is expanded, and more discussion is provided about how other oral history projects have used technology. 2. Teaching: The new edition addresses the use of oral history in online teaching. It also expands the discussion of Institutional Review Boards (IRBs) with the latest information about compliance issues. 3. Presentation: Once interviews have been conducted, how to present them in a variety of ways, including presentation. There is much new material available on innovative forms of presentation developed over the last decade, including interpretive dance and other public performances. 4. Legal considerations: The recent Boston College case, in which the courts ruled that oral history transcripts are sealed oral history transcripts, has re-focused attention on the problems of protecting donor restrictions. The new edition offers case studies from the past decade. 5. Theory and Memory: As a beginner's manual, Doing Oral History has not dealt extensively with theory. These emerge best from practice. But the third edition includes the latest thinking about memory and provides a sample of some of the theoretical issues surrounding oral sources. It will include examples of increased studies into catastrophe and trauma, and the impact of oral history for interviewers. 6. Internationalism: Perhaps the biggest development in the past decade has been the spreading of oral history around the world, facilitated in part by the International Oral History Association. New oral history projects have developed in an increasing number of countries, where the traditional archives reflect the old regimes, particularly in Eastern Europe, the Middle East, Asia, Africa, and Latin America. The third edition includes many more references to non-U.S. projects that will still be relevant to an American audience. The new edition of Doing Oral History an even more useful tool for beginners, teachers, archivists, and all those oral history managers who have inherited older collections that must be converted to the latest technology.

The Alex-award winning The Oxford Project is back in an abridged paperback edition. Less expensive, more portable, and retaining all the drama of this extraordinary true tale of a seemingly ordinary Midwestern town through the pictures and words its residents. Equal parts art, American history, cultural anthropology, and human narrative - The Oxford Project is at once personal and universal, surprising and predictable, simple and profound. The Project began in 1984, when photographer Peter Feldstein set out to photograph every single resident of his town, Oxford, IA (pop. 676). He converted an abandoned storefront on Main Street into a makeshift studio and posted fliers inviting people to stop by. At first they trickled in slowly but in the end nearly all of Oxford stood before his lens. Twenty years later, Feldstein decided to do it again. Only this time he invited writer Stephen G. Bloom to join him, and together they went in search of the same Oxford residents Feldstein had originally shot two decades earlier. What emerges is a living composite of a quintessential Midwestern community, told through the words and images of its residents - then and now. This intricate web of human connections among neighbors, friends, and family is the mainstay of small-town American life - unforgettably captured here in Feldstein's candid black-and-white photography and Bloom's rhythmic storytelling.
