

Paper Finder

There is little appreciation for what happens to graphic design artifacts after their useful life has ended. Sustainable Graphic Design outlines graphic design's relationship to production and consumption, demonstrating how designers can contribute solution-oriented responses to consumption, through tools and methodologies applicable to both education and practice. The book provides an overview of sustainable graphic design, based on global engagement with design's relationship to consumption, and features highly creative work inspired by complex issues and including studies of a variety of visual artifacts, the larger built environment and the very ordinary products of consumption. Presenting cutting-edge work in graphic design from practitioners, educators and students from North America, Northern Europe, Australia and the Far East, the book helps students visualize their future roles engaging with the field in response to ecological concerns, social justice and present systems of design by using extensive case studies of student work with step-by step instructions adapted for use by instructors.

Memoir

Mine Finder is a single-player puzzle game. The objective of the game is to clear a rectangular board containing hidden "mines" or bombs without detonating any of them, with help from clues about the number of neighboring mines in each field. The game originates from the 1960s, and it has been written for many computing platforms in use today, this is one of first books utilizing Mine Finder Puzzle. A logic puzzle variant of minesweeper, suitable for playing on paper, starts with some squares already revealed. The player cannot reveal any more squares, but must instead mark the remaining mines correctly. Unlike the usual form of minesweeper, these puzzles have a unique solution.
