Cyberbullying on social networking sites (SNS bullying) has emerged as a societal challenge in recent years. The prevalence and

adverse consequences of SNS bullying have been extensively reported in the mass media and drawn increasing attention from government agencies, parents, and the academic community. The research on SNS bullying is broad, and little effort has

been devoted to consolidating its findings.

Furthermore, scant attention has been paid to understanding the role technological factors play in the development of SNS bullying.

This book is directed to academics,

educators, and government policy-makers who are concerned about addressing emerging cyber-bullying and anti-authority student expressions through the use of cell phone and Internet technologies. There is a current policy vacuum relating to

In 2010, the International Cyberbullying Think Tank was held in order to discuss questions of definition, measurement, and methodologies related to cyberbullying research. The attendees' goal was to develop a set of guidelines that current and future researchers could use to improve the

quality of their research and advance our understanding of cyberbullying and related issues. This book is the product of their meetings, and is the first volume to provide researchers with a clear set of principles to inform their work on cyberbullying. peer group such as the relation between bullying, dominance and popularity and the role of bystanders in the social dynamic of the attacks.

However, nothing is known about the cyber community.

Contributors to this volume attempt to
