The latest book from Cengage Learning on Economics

This book evaluates the global labour market in the context of gender equality, and the associated policies and regulations, particularly in developing markets, to recommend measures for encouraging gender equality. It exposes the barriers that women employees encounter as well as some of the societal and workplace policies they, specifically, are subject to. Important themes within this topic include participation rates, the looming gap in hourly pay, availability of part-time and full-time positions, value, and social status associated with jobs held by men and women. The book examines how global gender policy objectives, such as gender equality in careers, gender balance in decision-making, and gender dimensions in research, can be incorporated into policy frameworks. The book analyzes the gendered nature of assumptions, processes and theories. The juxtaposition between family and work, tradition and modernity, and dependency and autonomy, clearly still seems to be misunderstood. Therefore, the book asks whether work improves women’s positions in society and/or changes their roles in their families. The authors explore and uncover the connections among employment, entrepreneurship, migration economics, and gender global labour markets and provide helpful solutions to the perceptions surrounding women’s status, risks, and inequality that limit their economic participation. This insightful read provides comprehensive details on a variety of themes and encourages further research on policies that are key to promoting gender equality. The book will appeal to postgraduate students and researchers of labour and feminist economics, the economics of gender, women’s studies and sociology.

"To change the way students see the world: this is my goal in teaching economics and in writing this book. Three facts about students are my guiding principles. First, they want to learn, but they are over-wheled by the volume of claims on their time and energy. So, they must see the relevance to their lives and future careers of what they are being asked to learn. Second, students want to get it, and get it quickly. So, they must be presented with clear and succinct explanations. And third, students want to make sense of today's world and be better prepared for life after school. So, they must be shown how to apply the timeless principles of economics and its models to illuminate and provide a guide to understanding today's events and issues, and the future challenges they are likely to encounter. The organization of this text arises directly from these guiding principles"--

An Introduction to the World's Oceans

People make decisions regarding the use of natural resources every day, from the individual recycling a sheet of paper to governments of large nations creating energy policy. Those decisions ultimately affect people around the world. Their motivation and results are best framed and analyzed using the tools of natural resource economics. Field presents the methods and applications of the discipline in the latest edition of his popular text. The updated book retains its successful structure, first presenting basic economic principles as they apply to natural resource use and then examining the economic issues surrounding individual resources. New material is included on: energy demand and efficiency; nonrenewable resources; individual transferable fishing quotas; water pricing; agricultural cropland programs; and the Endangered Species Act.
