Health planning is a critical component when responding to the health needs of low and middle income countries, characterised by particularly stringent resource constraints. The major communicable diseases such as AIDS, TB and malaria often appear in parallel with growing non-communicable diseases including heart disease and diabetes, and yet resources are often less than the levels recommended by the World Health Organisation for basic health care. The new edition of this well-respected text explains the importance of health planning in both developing regions such as Africa, and those in transition, such as Central and Eastern Europe. It stresses the importance of understanding the national and international context in which planning occurs, and provides an up to date analysis of the major current policy issues, including health reforms. Separate chapters are dedicated to the distinct issues of finance for health care and human resource planning. The various techniques used at each stage of the planning process are explained, starting with the situational analysis and then looking in turn at priority-setting, option appraisal, programming, implementation, monitoring, and evaluation. The book ends by examining the challenges facing planners in the 21st century, particularly in the light of growing globalisation. A major theme of the book is the need to recognise and reconcile the inevitable tension that lies between value judgements and 'rational' decision-making. As such, in addition to introducing techniques such as costing and economic appraisal, it also outlines techniques such as stakeholder analysis for understanding the relative attitudes and power of different groups in planning decisions. Each chapter includes a comprehensive bibliography (including key websites), a summary, and exercises to help the reader practise techniques and better understand the content. The book argues that all health professionals and community groups should be involved in the planning process for it to be effective, and will therefore appeal to anyone involved in planning.

ESSENTIALS OF PERSONAL FINANCIAL PLANNING Essentials of Personal Financial Planning was written to challenge the status quo by promoting personal financial planning (PFP) as a profession, not as a sales tool to gather assets under management or facilitate sales of insurance products. The book takes a comprehensive and integrated approach to PFP for accounting students, allowing them to view the profession through the lens of a CPA - with integrity and objectivity. This book systematically introduces the essentials of all the major PFP topics (estate, retirement, investments, insurance, and tax), as well as: The PFP process, concepts and regulatory environment. Professional responsibilities of a CPA personal financial planner and the requirements of the Statement on Standards in PFP Services. Time value of money concepts. The book then builds on these foundational concepts, showing their interconnectivity and professional opportunities, to provide a deeper understanding of PFP and its application. After reading this book, students will be able to apply the knowledge and skills gained from this course to have an immediate and long-term positive impact for themselves and for the clients they serve.
