Most interpretations of ethnicity concentrate either on particular societies or on specific dimensions of 'world society'. This work takes quite a different approach, arguing that variations within and across societies are vital for understanding contemporary dilemmas of ethnicity. The author aims to develop a new analysis of the relation between the nation on the one hand, and ethnicity and citizenship on the other. Oommen conceives of the nation as a product of a fusion of territory and language. He demonstrates that neither religion nor race determines national identities. As territory is seminal for a nation to emerge and exist, the dissociation between people and their 'homeland' makes them an ethnies. Citizenship is conceptualized both as a status to which nationals and ethnies ought to be entitled and a set of obligations, a role they are expected to play. Analyses of three historical episodes - colonialism and European expansion, Communist internationalism and the nation-state and its project of cultural unity - are examined to provide the empirical content of the argument. This book will be essential reading for second-year undergraduates and above in the areas of sociology, anthropology and cultural studies.

Reviews subjects on the exam, offers test-taking strategies and advice, and includes two full-length practice exams with answers and explanations.

From one of the most admired admirals of his generation -- and the only admiral to serve as Supreme Allied Commander at NATO -- comes a remarkable voyage through all of the world's most important bodies of water, providing the story of naval power as a driver of human history and a crucial element in our current geopolitical path. From the time of the Greeks and the Persians clashing in the Mediterranean, sea power has determined world power. To an extent that is often underappreciated, it still does. No one understands this better than Admiral Jim Stavridis. In *Sea Power*, Admiral Stavridis takes us with him on a tour of the world's oceans from the admiral's chair, showing us how the geography of the oceans has shaped the destiny of nations, and how naval power has in a real sense made the world we live in today, and will shape the world we live in tomorrow. Not least, *Sea Power* is marvelous naval history, giving us fresh insight into great naval engagements from the battles of Salamis and Lepanto through to Trafalgar, the Battle of the Atlantic, and submarine conflicts of the Cold War. It is also a keen-eyed reckoning with the likely sites of our next major naval conflicts, particularly the Arctic Ocean, Eastern Mediterranean, and the South China Sea. Finally, *Sea Power* steps back to take a holistic view of the plagues to our oceans that are best seen that way, from piracy to pollution. When most of us look at a globe, we focus on the shape of the of the seven continents. Admiral Stavridis sees the shapes of the seven seas. After reading *Sea Power*, you will too. Not since Alfred Thayer Mahan's legendary *The Influence of Sea Power upon History* have we had such a powerful reckoning with this vital subject.

A brilliant, kaleidoscopic narrative of Oklahoma City—a great American story of civics, basketball, and destiny, from award-winning journalist Sam Anderson NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The New York Times Book Review • NPR •

Chicago Tribune • San Francisco Chronicle • The Economist • Deadspin Oklahoma City was born from chaos. It was founded in a bizarre but momentous “Land Run” in 1889, when thousands of people lined up along the borders of Oklahoma Territory and rushed in at noon to stake their claims. Since then, it has been a city torn between the wild energy that drives its outsized ambitions, and the forces of order that seek sustainable progress. Nowhere was this dynamic better realized than in the drama of the Oklahoma City Thunder basketball team’s 2012-13 season, when the Thunder’s brilliant general manager, Sam Presti, ignited a firestorm by trading future superstar James Harden just days before the first game. Presti’s all-in gamble on “the Process”—the patient, methodical management style that dictated the trade as the team’s best hope for long-term greatness—kicked off a pivotal year in the city’s history, one that would include pitched battles over urban planning, a series of cataclysmic tornadoes, and the frenzied hope that an NBA championship might finally deliver the glory of which the city had always dreamed. Boom Town announces the arrival of an exciting literary voice. Sam Anderson, former book critic for New York magazine and now a staff writer at the New York Times magazine, unfolds an idiosyncratic mix of American history, sports reporting, urban studies, gonzo memoir, and much more to tell the strange but compelling story of an American city whose unique mix of geography and history make it a fascinating microcosm of the democratic experiment. Filled with characters ranging from NBA superstars Kevin Durant and Russell Westbrook; to Flaming Lips oddball frontman Wayne Coyne; to legendary Great Plains meteorologist Gary England; to Stanley Draper, Oklahoma City’s would-be Robert Moses; to civil rights activist Clara Luper; to the citizens and public servants who survived the notorious 1995 bombing of the Alfred P. Murrah federal building, Boom Town offers a remarkable look at the urban tapestry woven from control and chaos, sports and civics.

Most leaders of the U.S. expansion in the years before the Civil War were southern slaveholders. As Matthew Karp shows, they were nationalists, not separatists. When Lincoln’s election broke their grip on foreign policy, these elites formed their own Confederacy not merely to preserve their property but to shape the future of the Atlantic world.

"The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

The bloodshed and hatred of frontier conflict at once made go-betweens obsolete and taught the harsh lesson of the woods: the final incompatibility of colonial and native dreams about the continent they shared. Long erased from history, the go-betweens of early America are recovered here in vivid detail.

No Barriers is about my journey since coming down from Mt. Everest in 2001, and the path to where I am today. It is the story of my own life, the personal and professional struggles in the pursuit of growth, learning, and family, as well as a dream to kayak one of the world's great rivers as a blind athlete. It is also about the many people I've encountered along the way who possess what I call a "No Barriers" mindset, who live a No Barriers life. It highlights these pioneers who give those around them the courage to do great things. People who have risked failure, transcended their personal barriers, and shown others a way forward: scientists and innovators, artists and musicians, climbers and adventurers, activists and soldiers. No Barriers is a way of living, and it exists in all of us, like a deep internal light. But sometimes through trauma, loss, isolation, and disillusionment, people get shoved into a dark place, and that light is almost extinguished. Making hard choices is what feeds that light, and becomes the energy we need to propel us forward. This book is about making the hard choices to fuel that flickering light, so that we can ignite with purpose and become our very best selves.

A fascinating journey into the hidden psychological influences that derail our decision-making, Sway will change the way you think about the way you think. Why is it so difficult to sell a plummeting stock or end a doomed relationship? Why do we listen to advice just because it came from someone "important"? Why are we more likely to fall in love when there's danger involved? In Sway, renowned organizational thinker Ori Brafman and his brother, psychologist Rom Brafman, answer all these questions and more. Drawing on cutting-edge research from the fields of social psychology, behavioral economics, and organizational behavior, Sway reveals dynamic forces that influence every aspect of our personal and business lives, including loss aversion (our tendency to go to great lengths to avoid perceived losses), the diagnosis bias (our inability to reevaluate our initial diagnosis of a person or situation), and the "chameleon effect" (our tendency to take on characteristics that have been arbitrarily assigned to us). Sway introduces us to the Harvard Business School professor who got his students to pay \$204 for a \$20 bill, the head of airline safety whose disregard for his years of training led to the transformation of an entire industry, and the football coach who turned conventional strategy on its head to lead his team to victory. We also learn the curse of the NBA draft, discover why interviews are a terrible way to gauge future job performance, and go inside a session with the Supreme Court to see how the world's most powerful justices avoid the dangers of group dynamics. Every once in a while, a book comes along that not only challenges our views of the world but changes the way we think. In Sway, Ori and Rom Brafman not only uncover rational explanations for a wide variety of irrational behaviors but also point readers toward ways to avoid succumbing to their pull.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration.

Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators. "Fascinating.... Lays a foundation for understanding human history."—Bill Gates In this "artful, informative, and delightful" (William H. McNeill, New York Review of Books) book, Jared Diamond convincingly argues that geographical and environmental factors shaped the modern world. Societies that had had a head start in food production advanced beyond the hunter-gatherer stage, and then developed religion --as well as nasty germs and potent weapons of war --and adventured on sea and land to conquer and decimate preliterate cultures. A major advance in our understanding of human societies, Guns, Germs, and Steel chronicles the way that the modern world came to be and stunningly dismantles racially based theories of human history. Currently used at many colleges, universities, and high schools, this hands-on introduction to computer science is ideal for people with little or no programming experience. The goal of this concise book is not just to teach you Java, but to help you think like a computer scientist. You'll learn how to program—a useful skill by itself—but you'll also discover how to use programming as a means to an end. Authors Allen Downey and Chris Mayfield start with the most basic concepts and gradually move into topics that

are more complex, such as recursion and object-oriented programming. Each brief chapter covers the material for one week of a college course and includes exercises to help you practice what you've learned. Learn one concept at a time: tackle complex topics in a series of small steps with examples Understand how to formulate problems, think creatively about solutions, and write programs clearly and accurately Determine which development techniques work best for you, and practice the important skill of debugging Learn relationships among input and output, decisions and loops, classes and methods, strings and arrays Work on exercises involving word games, graphics, puzzles, and playing cards

As political, economic, and environmental issues increasingly spread across the globe, the science of geography is being rediscovered by scientists, policymakers, and educators alike. Geography has been made a core subject in U.S. schools, and scientists from a variety of disciplines are using analytical tools originally developed by geographers. Rediscovering Geography presents a broad overview of geography's renewed importance in a changing world. Through discussions and highlighted case studies, this book illustrates geography's impact on international trade, environmental change, population growth, information infrastructure, the condition of cities, the spread of AIDS, and much more. The committee examines some of the more significant tools for data collection, storage, analysis, and display, with examples of major contributions made by geographers. Rediscovering Geography provides a blueprint for the future of the discipline, recommending how to strengthen its intellectual and institutional foundation and meet the demand for geographic expertise among professionals and the public.

NEW YORK TIMES BESTSELLER "In her book, Melinda tells the stories of the inspiring people she's met through her work all over the world, digs into the data, and powerfully illustrates issues that need our attention—from child marriage to gender inequity in the workplace." — President Barack Obama "The Moment of Lift is an urgent call to courage. It changed how I think about myself, my family, my work, and what's possible in the world. Melinda weaves together vulnerable, brave storytelling and compelling data to make this one of those rare books that you carry in your heart and mind long after the last page." — Bren é Brown, Ph.D., author of the New York Times #1 bestseller Dare to Lead "Melinda Gates has spent many years working with women around the world. This book is an urgent manifesto for an equal society where women are valued and recognized in all spheres of life. Most of all, it is a call for unity, inclusion and connection. We need this message more than ever." — Malala Yousafzai "Melinda Gates's book is a lesson in listening. A powerful, poignant, and ultimately humble call to arms." — Tara Westover, author of the New York Times #1 bestseller Educated A debut from Melinda Gates, a timely and necessary call to action for women's empowerment. "How can we summon a moment of lift for human beings – and especially for women? Because when you lift up women, you lift up humanity." For the last twenty years, Melinda Gates has been on a mission to find solutions for people with the most urgent needs, wherever they live. Throughout this journey, one thing has become increasingly clear to her: If you want to lift a society up, you need to stop keeping women down. In this moving and compelling book, Melinda shares lessons she's learned from the inspiring people she's met during her work and travels around the world. As she writes in the introduction, "That is why I had to write this book—to share the stories of people who have given focus and urgency to my life. I want all of us to

see ways we can lift women up where we live.” Melinda’s unforgettable narrative is backed by startling data as she presents the issues that most need our attention—from child marriage to lack of access to contraceptives to gender inequity in the workplace. And, for the first time, she writes about her personal life and the road to equality in her own marriage. Throughout, she shows how there has never been more opportunity to change the world—and ourselves. Writing with emotion, candor, and grace, she introduces us to remarkable women and shows the power of connecting with one another. When we lift others up, they lift us up, too.

How an ordinary mammal manipulated nature to become technologically sophisticated city-dwellers -- and why our history points to an optimistic future in the face of environmental crisis Our species long lived on the edge of starvation. Now we produce enough food for all 7 billion of us to eat nearly 3,000 calories every day. This is such an astonishing thing in the history of life as to verge on the miraculous. The Big Ratchet is the story of how it happened, of the ratchets -- the technologies and innovations, big and small -- that propelled our species from hunters and gatherers on the savannahs of Africa to shoppers in the aisles of the supermarket. The Big Ratchet itself came in the twentieth century, when a range of technologies -- from fossil fuels to scientific plant breeding to nitrogen fertilizers -- combined to nearly quadruple our population in a century, and to grow our food supply even faster. To some, these technologies are a sign of our greatness; to others, of our hubris. MacArthur fellow and Columbia University professor Ruth DeFries argues that the debate is the wrong one to have. Limits do exist, but every limit that has confronted us, we have surpassed. That cycle of crisis and growth is the story of our history; indeed, it is the essence of The Big Ratchet. Understanding it will reveal not just how we reached this point in our history, but how we might survive it.

This publication covers global megatrends for the next 20 years and how they will affect the United States. This is the fifth installment in the National Intelligence Council's series aimed at providing a framework for thinking about possible futures and their implications. The report is intended to stimulate strategic thinking about the rapid and vast geopolitical changes characterizing the world today and possible global trajectories during the next 15-20 years by identifying critical trends and potential discontinuities. The authors distinguish between megatrends, those factors that will likely occur under any scenario, and game-changers, critical variables whose trajectories are far less certain. NIC 2012-001. The record-breaking phenomenon from Elizabeth Kostova is a celebrated masterpiece that "refashioned the vampire myth into a compelling contemporary novel, a late-night page-turner" (San Francisco Chronicle). Breathtakingly suspenseful and beautifully written, The Historian is the story of a young woman plunged into a labyrinth where the secrets of her family's past connect to an inconceivable evil: the dark fifteenth-century reign of Vlad the Impaler and a time-defying pact that may have kept his awful work alive through the ages. The search for the truth becomes an adventure of monumental proportions, taking us from monasteries and dusty libraries to the capitals of Eastern Europe—in a feat of storytelling so rich, so hypnotic, so exciting that it has enthralled readers around the world. "Part thriller, part history, part romance...Kostova has a keen sense of storytelling and she has a marvelous tale to tell." —Baltimore Sun

Krakauer's page-turning bestseller explores a famed missing person mystery while unraveling the larger riddles it holds: the profound pull of the American wilderness on our imagination; the allure of high-risk activities to young men of a certain cast of mind; the complex, charged bond between fathers and sons. "Terrifying... Eloquent... A heart-rending drama of human yearning." —New York Times In April 1992 a young man from a well-to-do family hitchhiked to Alaska and walked alone into the wilderness north of Mt. McKinley. He had given \$25,000 in savings to charity, abandoned his car and most of his possessions, burned all the cash in his wallet, and invented a new life for himself. Four months later, his decomposed body was found by a moose hunter. How Christopher Johnson McCandless came to die is the unforgettable story of Into the Wild. Immediately after graduating from college in 1991, McCandless had roamed through the West and Southwest on a vision quest like those made by his heroes Jack London and John Muir. In the Mojave Desert he abandoned his car, stripped it of its license plates, and burned all of his cash. He would give himself a new name, Alexander Supertramp, and, unencumbered by money and belongings, he would be free to wallow in the raw, unfiltered experiences that nature presented. Craving a blank spot on the map, McCandless simply threw the maps away. Leaving behind his desperate parents and sister, he vanished into the wild. Jon Krakauer constructs a clarifying prism through which he reassembles the disquieting facts of McCandless's short life. Admitting an interest that borders on obsession, he searches for the clues to the drives and desires that propelled McCandless. When McCandless's innocent mistakes turn out to be irreversible and fatal, he becomes the stuff of tabloid headlines and is dismissed for his naiveté, pretensions, and hubris. He is said to have had a death wish but wanting to die is a very different thing from being compelled to look over the edge. Krakauer brings McCandless's

uncompromising pilgrimage out of the shadows, and the peril, adversity, and renunciation sought by this enigmatic young man are illuminated with a rare understanding--and not an ounce of sentimentality. Mesmerizing, heartbreaking, Into the Wild is a tour de force. The power and luminosity of Jon Krakauer's stoytelling blaze through every page.
