With the rise of science,
we moderns believe, the
world changed irrevocably,
separating us forever from
our primitive, premodern

Online Library Pearson Science

8

ancestors. But if we were to let go of this fond conviction, Bruno Latour asks, what would the world look like? His book, an anthropology of science, shows us how much of

Online Library Pearson Science

8

modernity is actually a matter of faith. What does it mean to be modern? What difference does the scientific method make? The difference, Latour explains, is in our

Online Library Pearson Science

8

careful distinctions
between nature and
society, between human and
thing, distinctions that
our benighted ancestors,
in their world of alchemy,
astrology, and phrenology,

Online Library Pearson Science

8

never made. But alongside this purifying practice that defines modernity, there exists another seemingly contrary one: the construction of systems that mix politics,

Online Library Pearson Science

8

science, technology, and nature. The ozone debate is such a hybrid, in Latour's analysis, as are global warming, deforestation, even the idea of black holes. As

Online Library Pearson Science

8

these hybrids proliferate, the prospect of keeping nature and culture in their separate mental chambers becomes overwhelming—and rather than try, Latour suggests,

Online Library Pearson Science

8

we should rethink our distinctions, rethink the definition and constitution of modernity itself. His book offers a new explanation of science that finally recognizes

Online Library Pearson Science

8

the connections between nature and culture—and so, between our culture and others, past and present. Nothing short of a reworking of our mental landscape. We Have Never

With the view that children are capable young scientists, authors encourage science teaching in ways that nurture students' curiosity about how the natural world works including

Online Library Pearson Science

8

research-based approaches to support all K-5 children constructing scientific explanations via talk and writing. Grounded in NSF-funded research, this book/DVD provides K-5 teachers with a

Online Library Pearson Science

8

framework for explanation
(Claim, Evidence, Reasoning)
that they can use to organize
everything from planning to
instructional strategies and from
scaffolds to assessment.
Because the framework

Online Library Pearson Science

8

addresses not only having students learn scientific explanations but also construct them from evidence and evaluate them, it is considered to build upon the new NRC framework for K-12 science

education, the national standards, and reform documents in science education, as well as national standards in literacy around argumentation and persuasion, including the Common Core Standards for

Online Library Pearson Science

English Language Arts (Common Core State Standards Initiative, 2010). The chapters guide teachers step by step through presenting the framework for students, identifying opportunities to incorporate

Online Library Pearson Science

8

scientific explanation into lessons, providing curricular scaffolds (that fade over time) to support all students including ELLs and students with special needs, developing scientific explanation assessment tasks,
