Theology and the University in Nineteenth-Century Germany examines the dual transformation of institutions and ideas that led to the emergence of theology as science, the paradigmatic project of modern theology associated with Friedrich Schleiermacher. Beginning with earlier educational reforms across central Europe and especially following the upheavals of the Napoleonic period, an impressive list of provocateurs, iconoclasts, and guardians of the old faith all confronted the nature of the university, the organization of knowledge, and the unity of theology's various parts, quandaries which together bore the collective name of 'theological encyclopedia'. Schleiermacher's remarkably influential programme pioneered the structure and content of the theological curriculum and laid the groundwork for theology's historicization. Zachary Purvis offers a comprehensive investigation of Schleiermacher's programme through the era's two predominant schools: speculative theology and mediating theology. Purvis highlights that the endeavour ultimately collapsed in the context of Wilhelmine Germany and the Weimar Republic, beset by the rise of religious studies, radical disciplinary specialization, a crisis of historicism, and the attacks of dialectical theology. In short, the project represented university theology par excellence. Engaging in detail with these developments, Purvis weaves the story of modern university theology into the broader tapestry of German and European intellectual culture, with periodic comparisons to other national contexts. In doing so, he Purvis presents a

substantially new way to understand the relationship between theology and the university, both in nineteenth-century Germany and, indeed, beyond.

This book includes twenty case studies of World Heritage sites from around the world that explore, from a human rights perspective, indigenous peoples' experiences with World Heritage sites and with the processes of the World Heritage Convention. The book will serve as a resource for indigenous peoples, World Heritage site managers, and UNESCO, as well as academics, and it will contribute to discussions about what changes or actions are needed to ensure that World Heritage sites can play a consistently positive role for indigenous peoples, in line with the spirit of the United Nations Declaration on the Rights of Indigenous Peoples.

For the first time, the social problem of untouchability, which is peculiar to India, is being studied mathematically. We have used Fuzzy Cognitive Maps and Neutrosophic Cognitive Maps to analyze the views of the revolutionary Periyar E. V. Ramasamy (17.09.1879 24.12.1973) who relentlessly worked for more than five decades to secure the rights of the oppressed people who were considered untouchables. This thought-

When thinking of India, it is hard not to think of caste. In academic and common parlance alike, caste has become a central symbol for India, marking it as fundamentally different from other places while expressing its essence. Nicholas Dirks argues that caste is, in fact, neither an unchanged survival of ancient India nor a single system that reflects a core cultural value. Rather than a basic expression of Indian tradition, caste is a modern phenomenon--the product of a concrete historical encounter between India and British colonial rule. Dirks does not contend that caste was invented by the British. But under British domination caste did become a single term capable of naming and above all subsuming India's diverse forms of social identity and organization. Dirks traces the career of caste from the medieval kingdoms of southern India to the textual traces of early colonial archives; from the commentaries of an eighteenth-century Jesuit to the enumerative obsessions of the late-nineteenth-century census; from the ethnographic writings of colonial administrators to those of twentieth-century Indian scholars seeking to rescue ethnography from its colonial legacy. The book also surveys the rise of caste politics in the twentieth century, focusing in particular on the emergence of caste-based movements that have threatened nationalist consensus. Castes of Mind is an ambitious book, written by an accomplished scholar with a rare

mastery of centuries of Indian history and anthropology. It uses the idea of caste as the basis for a magisterial history of modern India. And in making a powerful case that the colonial past continues to haunt the Indian present, it makes an important contribution to current postcolonial theory and scholarship on contemporary Indian politics.

*"Hinduism is widely regarded not just as a religious belief, but as a philosophy of life based upon certain key tenets. Viewed in a casual manner, these concepts seem to be eternal and unchanging. A Hindu today would describe his or her tradition in terms of the concepts of Brahman, Isvara, Maya, Jiva, Samsara, Karma, Dharma, among others, much like his counterpart a thousand years ago would have done. Yet, has nothing changed in Hinduism?"*

*"Modern Hindu Thought questions such simplistic assumptions. This volume explains the manner in which these terms have been reconfigured in modern Hinduism, and how they compare with the way they were understood in classical Hinduism. Most of us are familiar with the idea that the more things change the more they remain the same. This book suggests that the opposite may well be true - the more things seem to remain the same, the more they may have changed."--BOOK JACKET.*

**Written by a team of experts at the forefront of the cyber-physical systems (CPS) revolution, this book provides an in-depth look at security and privacy, two of the most critical challenges facing both the CPS research and development community and ICT professionals. It explores, in depth, the key technical, social, and legal issues at stake, and it provides readers with the information they need to advance research and development in this exciting area. Cyber-physical systems (CPS) are engineered systems that are built from, and depend upon the seamless integration of computational algorithms and physical components. Advances in CPS will enable capability, adaptability, scalability, resiliency, safety, security, and usability far in excess of what today's simple embedded systems can provide. Just as the Internet revolutionized the way we interact with information, CPS technology has already begun to transform the way people interact with engineered systems. In the years ahead, smart CPS will drive innovation and competition across industry sectors, from**

*Moving away from a dominant cultural equation of love, desire,*

*and intimacy with marriage, Beyond Desire offers a radical view that reinstates the body as an enduring symbol of desire. Drawing on the works of seven twentieth-century male Tamil writers beginning with K.P. Rajagopalan, this book explores a spectrum of maleafemale intimacies wherein desire, liberated from the sexual act, acquires its own creative agency. Through a reading of selected works of writers like T. Janakiraman, Karichan Kunju, Mauni, M.V. Venkatram, Dandapani Jeyakantan, and Tanjai Prakash, this book focuses on the category of the sensual that intertwines the sexual and other modes of relating to the world through spirituality, social reform, and artistic labour. As most of these narratives are articulated through male characters, many of whom are torn between expressing their desire and preserving their religious integrity, the overarching mission remains rooted in discerning the shifts in male perception. The first book in English on modern Tamil literature, it offers alternative readings of sexualities that resist social and sexual definitions, and is a significant contribution to literary scholarship in Tamil. *In this brilliant study, Thomas Pfau argues that the loss of*

*foundational concepts in classical and medieval Aristotelian philosophy caused a fateful separation between reason and will in European thought. Pfau traces the evolution and eventual deterioration of key concepts of human agency—will, person, judgment, action—from antiquity through Scholasticism and on to eighteenth-century moral theory and its critical revision in the works of Samuel Taylor Coleridge. Featuring extended critical discussions of Aristotle, Gnosticism, Augustine, Aquinas, Ockham, Hobbes, Shaftesbury, Mandeville, Hutcheson, Hume, Adam Smith, and Coleridge, this study contends that the humanistic concepts these writers seek to elucidate acquire meaning and significance only inasmuch as we are prepared positively to engage (rather than historicize) their previous usages. Beginning with the rise of theological (and, eventually, secular) voluntarism, modern thought appears increasingly reluctant and, in time, unable to engage the deep history of its own underlying conceptions, thus leaving our understanding of the nature and function of humanistic inquiry increasingly frayed and incoherent. One consequence of this shift is to leave the moral self-expression of intellectual elites and ordinary*

*citizens alike stunted, which in turn has fueled the widespread notion that moral and ethical concerns are but a special branch of inquiry largely determined by opinion rather than dialogical reasoning, judgment, and practice. A clear sign of this regression is the present crisis in the study of the humanities, whose role is overwhelmingly conceived (and negatively appraised) in terms of scientific theories, methods, and objectives. The ultimate casualty of this reductionism has been the very idea of personhood and the disappearance of an adequate ethical language. Minding the Modern is not merely a chapter in the history of ideas; it is a thorough phenomenological and metaphysical study of the roots of today's predicaments. Over the course of five conversations, the philosopher helps his student to understand how each of us is able to determine the direction of our own life, free from the shackles of past traumas and the expectations of others.
