that there will be little change for many years. Most of the increase in power generation in the next few decades will be accounted for by emerging countries and, for many, coal is the only available or

For over fifty years Nigeria depended on coal for over 70% of primary energy requirements but, with the discovery of oil and gas in early 1960s the demand for coal began to decline.

However, in view of perpetual and

Acces PDF

intractable problems with gas supply and the hydrodams, there has been renewed interest in the country's vast coal resources and many coal-fired power plants are scheduled to come on stream by 2020. It is

noteworthy that all the proposed plants will adopt clean coal technologies.
