Excerpt from *Morals a Treatise on the Psycho-Sociological Bases of Ethics* The field of psychological research has widened by the triple alliance of psychology, physiology, and sociology - an alliance at once of the most intimate and fundamental nature, and productive of far-reaching results. It need, therefore, occasion no surprise that among the volumes of a scientific series is to be found a treatise dealing with ethical questions. No doubt it is true that ethics and metaphysics have up to the present been closely interwoven. Under the guise of ethical theory, philosophical speculations of the most audacious type are presented to the student. But recent works on ethics have not been numerous, and betray signs of lassitude in those metaphysicians who paraphrase in general terms the works of Kant, and seem more anxious to soar into the realms of lofty thought than to lay the foundations of work that will be both positive and lasting. It would seem that the time has come for a system of ethics - less ambitious in its aims, more restricted in its scope, and based on a more rigorous method of treatment. ## Socio-Philosophical Approach to Education

This book presents a unified and systematic philosophical account of human actions and their explanation, and it does it in the spirit of scientific realism. In addition, various other related topics, such as psychological concept formation and the nature of mental events and states, are discussed. This is due to the fact that the key problems in the philosophy of psychology are interconnected to a high degree. This interwovenness has affected the discussion of these problems in that often the same topic is discussed in several contexts in the book. I hope the reader does not find this too frustrating. The theory of action developed in this book, especially in its latter half, is a causalist one. In a sense it can be regarded as an explication and refinement of a typical common sense view of actions and the mental episodes causally responsible for them. It has, of course, not been possible to discuss all the relevant philosophical problems in great detail, even if I have regarded it as necessary to give a brief treatment of relatively many problems. Rather, I have concentrated on some key issues and hope that future research will help to clarify the rest.

Transformative approaches to teaching and learning have become ubiquitous in education today. Researchers, practitioners and commentators alike often claim that a truly worthwhile education should transform learners in a profound and enduring way. But what exactly does it mean to be so transformed? What should teachers be transforming students into? Should they really attempt to transform students at all? The Transformative Classroom engages with these questions left open by the vast discussion of transformative education, providing a synthetic overview and critique of

some of the most influential approaches today. In doing so, the book offers a new theory of transformative education that focuses on awakening and facilitating students' aspiration. Drawing on important insights from ethics, psychology, and the philosophy of education, the book provides both conceptual clarity and concrete practical guidance to teachers who hope to create a transformative classroom. This book will be of great interest for academics, K-12 teachers, researchers and students in the fields of curriculum and instruction, teaching and learning, adult education, social justice education, educational theory and philosophy of education.

This book offers a widely interdisciplinary approach to investigating important questions surrounding the cognitive foundations of group attitudes and social interaction. The volume tackles issues such as the relationship between individual and group attitudes, the cognitive bases of group identity and group identification and the link between emotions and individual attitudes. This volume delves into the links between individual attitudes (such as beliefs, goals and intentions) and how they are reflected in shared attitudes where common belief, collective acceptance, joint intentions, and group preferences come into play. It pursues answers to the connections between trust and beliefs, goals and intentions and attempts to investigate questions such as: does trust have an affective component and how it may relate to hope and fear? The volume also scrutinizes game theory and questions whether it can satisfactorily explain and model social interaction and if there may be any concepts which are not addressed by the current theory. Contributors are derived from disciplines including philosophy, economics, psychology, logic and

computer science. Interdisciplinary in scope and comprehensive detail, this volume integrates a variety of approaches – philosophical, psychological and artificial intelligence – to strategic, normative and emotional aspects of social interaction. Routledge International Handbook of Theoretical and Philosophical Psychology is a compilation of works by leading scholars in theoretical and philosophical psychology that offers critical analyses of, and alternatives to, current theories and philosophies typically taken for granted in mainstream psychology. Within their chapters, the expert authors briefly describe accepted theories and philosophies before explaining their problems and exploring fresh, new ideas for practice and research. These alternative ideas offer thought-provoking ways of reinterpreting many aspects of human existence often studied by psychologists. Organized into five sections, the volume covers the discipline of psychology in general, various subdisciplines (e.g., positive psychology and human development), concepts of self and identity as well as research and practice. Together the chapters present a set of alternative ideas that have the potential to take the field of psychology in fruitful directions not anticipated in more traditional theory and research. This handbook will be a valuable resource for students and scholars of the theory, assumptions, and history of psychology.

Morals a Treatise on the Psycho-Sociological Bases of Ethics

Utilitarianism began as a movement for social reform that changed the world, based on the ideal of maximizing pleasure and minimizing pain. There is a tendency to enter into debates for and against the ethical doctrine of Utilitarianism without a clear understanding of its basic concepts. The Pursuit of Happiness now offers a rigorous account of the foundations of Utilitarianism, and vividly sets out possible ways forward for its future development. To understand Utilitarianism, we must understand utility: what is it to be measured, and how the aggregate utility of a group can be understood. Narens and Brian Skyrms, respectively a cognitive scientist and a philosopher, pursue these questions by adopting both formal and historical methods, examining theories of measuring utility from Jeremy Bentham, the founder of the Utilitarian movement to the present day, taking in psychophysics, positivism, measurement theory, meaningfulness, neuropsychology, representation theorems, and the dynamics of formation of conventions. On this basis, Narens and Skyrms argue that a meaningful form of Utilitarianism that can coordinate action in social groups is possible through interpersonal comparison and the formation of conventions.

Philosophical Foundations of Evolutionary Psychology explains how the topic of evolutionary psychology has developed from the contributions of philosophers such as Socrates, Plato, and Rene Descartes.

conceptions of learning and the needs of society. Foundation of curriculum is rooted with the foundation of education. Historically, modern curriculum and education in Ethiopia is associated with traditional church education, mainly the Orthodox Church. The Ethiopian Orthodox Church curriculum is not well organized and written as a document and the duration of the program is not explicitly given; it depends only on the achievement of the individual and his motivation. The notion of education in Ethiopia is started in sixth century, the entrance of Christianity. The church continues to dominate the education system in Ethiopia until modern education was introduced in 1908. Many social problems forced the Emperor to think of modern education and hence he launched it with many resistances from the church. For many years the philosophy of church education influences modern education, the attitude of secretiveness that is keeping knowledge secret from others and rote memorization. However, the contents and purpose of education depends on the political ideology of the Emperors. Human beings require social interaction. This concept of social being leads to the view of living together. In Ethiopian culture there is no experience sharing rather there is secretes an individual cannot share his/her knowledge to others, because of not to be harmed by others. However development which implies quality education is the result of our interaction, our debates and shared vision. Contemporary educationalists argue that education must serve the purpose of social life that brings people together (social reconstructionism). The very important foundation for modern education in Ethiopia is sociology. Emperor Menelik II who introduce modern education is because of the sociological crisis the country felt at large. Of this economic issue takes largest account. The church school epistemology which is emphasizing on rote learning and memorization, affects the pedagogy of modern education in Ethiopia. Hence reform is required in the education system, from rote memorization

**The book's premise is that the theories taught in management schools are based on unacknowledged philosophical perspectives that are significant not so much for what they explain, but for what they assume. Rarely made explicit, these perspectives cannot be reconciled, with the result that the study of management has been dominated by contradictions and internecine intellectual warfare. However, the ability critically to analyze these diverse perspectives is essential to practicing and aspiring managers if they are to evaluate expert opinion. Moreover, since management is primarily an exercise in communication, managing is impossible in the darkness of an imprecise language, in the absence of moral references, or in the senseless outline of a world without intellectual foundations. Managing is a prime example of applied philosophy.**

**John Dewey's Democracy and Education addresses the challenge of providing quality public education in a democratic society. In this classic work Dewey calls for the complete renewal of public education, arguing for the fusion of vocational and contemplative studies in education and for the necessity of universal education for the advancement of self and society. First published in 1916, Democracy and Education is regarded as the seminal work on public education by one of the most important scholars of the century.**

**An Architecture of the Mind proposes a mathematically logical and rigorous theory of lived experience, and a comprehensive and coherent theory of psychology. It is also remarkably simple. Building on the core proposition that the mind is a network structure, it proposes a theory of the psychological process as operating within and upon that structure, and a theory of behaviour as determined by that process. The theory presents a view of the mind which reveals a new perspective on the process of reasoning in thinking and how it may coexist with processes more**

**akin to simple rule-following and computation. It allows us to understand the role and influence of social influences in the psychological process by revealing their role in and influence on mental networks. It reveals the place of motivations in the psyche as complexes in mental networks from whence aesthetics, preference and value judgements arise and demonstrates their necessity for behaviour. This book is especially useful for the perspective it offers on behavioural change. It reveals the conditions under which traditional economic theories of incentives will be appropriate, and the conditions under which they will not be. This book draws on psychology, social science, cultural science, neuroscience and economics to offer an interdisciplinary contribution which resists the tendency for disciplines to become over-specialised and fragmented. It will be of interest to any interested in the functioning of the human mind and the government of human behaviour.**

Consciousness has been described as one of the most mysterious things in the universe. Scientists, philosophers, and commentators from a whole range of disciplines can't seem to agree what it is, or why it is that the whole rich panoply of human experience seems to emerge from a lump of squishy grey matter in our heads. Most agree, though, that consciousness represents a Hard Problem, and consciousness studies has emerged as a quasi-discipline over recent years, as a multidisciplinary discourse seeking to address these and other fascinating and perplexing questions. While the arts and humanities have joined the sciences at the debating table, music has been relatively under-represented-until now. This book redresses this balance. Its 20 essays offer different takes on issues around music.

consciousness, both addressing existing agendas, and introducing new ones. No single view emerges, but what the collection as a whole makes clear is that to understand consciousness we need to do much more than look at brains. Studying music makes it clear that consciousness is as much to do with minds, bodies, culture, and history. The book, which includes several chapters drawing from Eastern philosophies, also provides a corrective to any perception that the study of consciousness is a purely Western preoccupation. In addition to what it says about consciousness, the book also - and perhaps primarily - represents a new configuration of writings about music.

**Psychological Foundations of Education** presents some of the principles of psychology that are relevant to learning and teaching. It presents an alternative answer to the problem of the bifurcation of general and educational psychology in the curriculum of teacher preparation. While the solution is provisional and has obvious imperfections, it is offered in the hope that it may stimulate discussion of the problem and other solutions and/or explicit justifications for past practice. Key concepts discussed include teachers' attitudes and behavior, different types of learning, technology in education, forgetting and extinction, child development, and intelligence measurements. Also covered are the assessment of educational achievement, the social psychology of the classroom, and education in urban schools. This text should have a variety of uses in classes where students are preparing for teaching. It was written specifically for those situations in which the prospective teacher is introduced to psychology through a one- or two-semester integrated sequence.

This book sets out the psychological basis of musical development in children and adults. The study has two major objectives: to review the research findings, theories and methodologies relevant to the developmental study of music; and to offer a framework within which these can be organised so as to pave the way for future research. It describes the relationship between thinking and music, and discusses the relationship between thinking and music in pre-schoolers and schoolchildren in areas such as singing, aesthetic

appreciation, rhythmic and melodic development, and the acquisition of harmony and tonality. The book describes the development of musical taste, and discusses the questions of musical creativity, and of the social psychology of musical taste and fashion. As a comprehensive study of the links between developmental psychology and music education, Hargreaves' work demonstrates the practical and theoretical importance of psychological research on the process underlying children's musical perception, cognition and performance.

Changes and development in education in India; a study.

All but buried for most of the twentieth century, the concept of altruism has re-emerged in this last quarter as a focus of intense scholarly inquiry and general public interest. toward a global community. Largely initiated by a group of pioneering social psychologists, early questions on altruism centered on its motivation and development primarily in the context of contrived laboratory experiments. Although publications on the topic have been considerable over the last several years, and now represent the work of representatives from many disciplines of inquiry, this volume is distinguished from others in several ways. Embracing the Other emerged primarily as a response to recent research on an extraordinary manifestation of real-life altruism, namely to recent studies of non-Jewish rescuers of Jews during World War II. It is the work of a multi-disciplinary and international group of scholars, including philosophers, social psychologists, historians, sociologists, and educators, challenging several prevailing conceptual definitions and motivational sources of altruism. The book combines both new empirical and historical research as well as theoretical and philosophical approaches and includes a lengthy section addressing the practical implications of current thinking on altruism for society at large. The result is a multi-textured work, addressing critical issues in varied disciplines, while centered on shared themes.
