or engineering. The book provides an important opportunity for students to learn the core concepts of physics and understand how those concepts apply to their lives and to the world around them. Due to the comprehensive nature of the material, we are offering the book in three volumes for flexibility and efficiency. Coverage and Scope Our University Physics textbook adheres to the scope and sequence of most two- and three-semester physics courses nationwide. We have worked to make physics interesting and accessible to students while maintaining the mathematical rigor inherent in the subject. With this objective in mind, the

content of this textbook has been developed and arranged to provide a logical progression from fundamental to more advanced concepts, building upon what students have already learned and emphasizing connections between topics and between theory and applications. The goal of each section is to enable students not just to recognize concepts, but to work with them in ways that will be useful in later courses and future careers. The organization and pedagogical features were developed and vetted with feedback from science educators dedicated to the project.

This study reports enrollments in general science, biology, chemistry, and physics in public high schools, the additional science offerings, the number of teachers serving these pupils, class size, grade placement of science subjects, time allotments for recitation and laboratory, and troublesome problems related to the teaching of science. The findings are based on data collected for the school year 1947-48. These data were

provided by teachers or administrators in a sampling of the Nation's public high schools. The sample, including 755, or 3.15 percent, of the 23,947 public high schools, Negro and white, was a stratified random sample in which the schools were selected according to size and type of school. Of the 755 public high schools, 715, or 94.7 percent, provided information which was used for the purposes of the study. These included 34 schools which provided information included in all but a few sections of the study. There were 18 schools, or 2.4 percent, reported as dropped from the list of high schools through consolidations or other administrative changes. Only 22 schools, or 2.9 percent,

The 733 schools that responded constituted 3.06 percent of the public high schools of the United States, and the schools that reported usable data constituted 2.99 percent of the Nation's public high schools.
